#### Upcoming Exchange Device Access and Conditional Access changes with Outlook mobile

MC216824

	check before:	08/01/2020
	Status:	
	Created:	06/20/2020
	Product:	Azure Active Directory, Exchange, Outlook, Intune
	Platform:	Android, iOS, mobile, Online
	Scope:	Administration, Security, User
	Ring:	
<p>Recently, we discovered that certain Azure Active Directory Conditional Access policies prevented Exchange Online device access rules from being applied to Outlook for iOS and Android. For example, customers with a conditional access policy that required Multi-factor authentication (MFA) resulted in Exchange Online not processing device access rules for Outlook for iOS and Android.</p> <p>Beginning in August 2020, we will roll out changes in Exchange Online to ensure that only certain Conditional Access policies bypass Exchange's device access rules. Specifically, only Conditional Access policies configured with the following grant access controls will prevent Exchange device access rules being applied to Outlook for iOS and Android:</p> <ul style="list-style-type: none"> <li>Require device to be marked as compliant</li> <li>Require approved client app</li> <li>Require app protection policy</li> </ul> <p>Key Points:</p> <ul style="list-style-type: none"> <li>Timing: Beginning of August</li> <li>Action: Review and assess organizational impact</li> </ul>		

<b>Docu to check</b>	Automation / Scripts, Working instructions for IT Support, User Knowledge base
<b>More Info URL</b>	<a href="https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261">https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261</a>
<b>MS Preperations</b>	<p>Organizations have a few different options to prepare for this change:</p> <p>Implement Microsoft Endpoint Manager and one of the above grant access controls. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#leveraging-enterprise-mobility--security-suite-to-protect-corporate-data-with-outlook-for-ios-and-android">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#leveraging-enterprise-mobility--security-suite-to-protect-corporate-data-with-outlook-for-ios-and-android</a>" Leveraging Enterprise Mobility + Security suite to protect corporate data with Outlook for iOS and Android.</p> <p>Create an Exchange Online device access rule that allows Outlook for iOS and Android. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#option-1-block-all-email-apps-except-outlook-for-ios-and-android">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#option-1-block-all-email-apps-except-outlook-for-ios-and-android</a>" Block all email apps except Outlook for iOS and Android.</p> <p>Manually add the user's Outlook for iOS and Android Device ID to the user's ActiveSyncAllowedDeviceIDs property. To obtain the Device ID, use "<a href="https://docs.microsoft.com/powershell/module/exchange/get-mobiledevicestatistics?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/get-mobiledevicestatistics?view=exchange-ps</a>" Get-MobileDeviceStatistics. To add the Device ID to the user's ActiveSyncAllowedDeviceIDs property, see "<a href="https://docs.microsoft.com/powershell/module/exchange/set-casmailbox?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/set-casmailbox?view=exchange-ps</a>" Set-CASMailbox.</p> <p>Change the default access level to Allow. For more information, see "<a href="https://docs.microsoft.com/powershell/module/exchange/set-activesyncorganizationsettings?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/set-activesyncorganizationsettings?view=exchange-ps</a>" Set-ActiveSyncOrganizationSettings. This change allows all mobile devices, regardless of type, to connect.</p> <p>Alternatively, organizations can retain their default mobile device access level and wait for this change to take place and manually allow each device as they are quarantined/blocked.</p> <p>Important: Because Outlook for iOS and Android's device IDs are not governed by any physical device ID, the ID can change without notice. When this happens, it can cause unintended consequences when device IDs are used for managing user devices, as existing 'allowed' devices may be unexpectedly blocked or quarantined by Exchange. Therefore, we recommend administrators only set mobile device access policies for Outlook for iOS and Android that allow/block devices based on device type or device model.</p> <p>For more information on this change, see "<a href="https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261">https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261</a>" Upcoming Exchange Online Device Access and Conditional Access changes with Outlook mobile.</p>
<b>MS How does it affect me</b>	<p>If you are utilizing Conditional Access policies that do not leverage the above grant access controls and have configured the mobile device access level within Exchange Online to either block or quarantine devices, users using Outlook for iOS and Android will be blocked or quarantined by Exchange Online after this change is implemented. By default, the mobile device access level in Exchange Online is set to allow.</p> <p>If you are utilizing Conditional Access policies with the above grant access controls, your users will not be affected.</p>

<b>(Updated) Retiring Teams mobile support for devices running on Android 4.4</b>		<b>MC217681</b>
Updated August 18, 2020: We have updated this post to clarify that this impacts Teams mobile.		check before: <b>08/01/2020</b>
We will be retiring the Teams mobile support on Android 4.4. Instead we recommend that users upgrade to newer Android builds, which is where we will continue to invest.		Status:
Key Points:		Created: 07/01/2020
Major: Retirement		Product: Teams
Timeline: August 1, 2020		Platform: Android
Action: Review and assess impact		Scope: User, MDM, Administration
		Ring:
<b>Docu to check</b>	Service Description, User Knowledge base, Working instructions for IT Support	
<b>MS Preperations</b>	Instead of using Android 4.4, we recommend updating the Android OS version to 5 and above.	
<b>MS How does it affect me</b>	<p>If you have devices running Android version 4.4 You are receiving this message because our reporting indicates one or more users in your organization are using Android mobile devices that has Android version 4.4</p> <p>The exiting Teams build 1.0.0.2020050801 will continue to work on Android 4.4 for the next 2 months but there won't be any app updates going forward.</p>	

<b>(Updated) New Power Platform features coming to Teams</b>		<b>MC219363</b>
Updated September 11, 2020: We have updated the content below to provide additional information.		check before: <b>08/04/2020</b>
We are adding new " <a href="https://powerplatform.microsoft.com/">https://powerplatform.microsoft.com/</a> " Power Platform features to make it easier for customers to create, deploy and manage key business apps and chatbots directly within Microsoft Teams.		Status: <b>Rolling out</b>
This message is associated with Microsoft 365		Created: 07/28/2020
" <a href="https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66407">https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66407</a> " Roadmap ID 66407.		Product: Power Automate, Teams, Power apps
When this will happen		Platform: Online, World tenant
The rollout will begin in mid-September (previously mid-August) and be complete by the end of September (previously August).		Scope: Administration, Licensing, User, Compliance

<b>Docu to check</b>	Service Description, User Knowledge base
<b>Linked Item Details</b>	<p>66407 Title : Microsoft Teams: Microsoft Oakdale in Teams</p> <p>66407 Description: Select Microsoft 365 and Office 365 subscriptions that include Power Apps and Power Automate are expanding with the introduction of Microsoft Project Oakdale– a built-in, flexible datastore supporting relational, image and file data with a one-click experience for deploying solutions natively in Teams. With Project Oakdale, Power Apps capabilities included in select Microsoft 365 and Office 365 licenses will expand to provide an integrated app studio for users to build and deploy custom apps within Teams. Similarly, Power Virtual Agents capabilities are being introduced to Teams. Users will now be able to build and deploy custom chatbots in Project Oakdale environments directly within Teams. New Power Automate capabilities will also be available in Teams, including the ability to trigger flows directly from Teams messages.</p> <p>66407 Url : <a href="https://techcommunity.microsoft.com/t5/microsoft-teams-blog/microsoft-teams-is-shaping-the-future-of-work-with-low-code-apps/ba-p/1507180">https://techcommunity.microsoft.com/t5/microsoft-teams-blog/microsoft-teams-is-shaping-the-future-of-work-with-low-code-apps/ba-p/1507180</a></p>
<b>MS Preperations</b>	<p>Once this update is complete, you will see new service plans – Microsoft Project Oakdale and Power Virtual Agents for Teams – in the list of plans included with your subscription. These changes will not impact other features in your subscription, besides what is mentioned above. However, you may consider updating your internal documentation to reflect these additional capabilities, as needed.</p> <p>The following admin controls are available in Teams Admin center to enable/disable the new functionality in public preview –</p> <p>App permissions policies: Admins can turn the Power Platform maker/builder experience off or on in Teams by selecting Power Apps and/or Power Virtual Agents applications available under 'Microsoft Apps'. This setting is available for a specific set of users or for the tenant all up.</p> <p>Note: Admins can turn the Power Platform one-click deployment experience off or on in Teams by selecting Shared Power Apps and/or Shared Power Virtual Agents applications available under 'Microsoft Apps'. This setting is available for a specific set of users or for the tenant all up.</p> <p>More information on App permissions policies can be found here: "<a href="https://docs.microsoft.com/en-us/microsoftteams/teams-app-permission-policies">https://docs.microsoft.com/en-us/microsoftteams/teams-app-permission-policies</a>" Manage app permission policies in Microsoft Teams</p> <p>Existing Power Platform functionality within Office 365 remains unchanged.</p> <p>Learn more at the "<a href="https://techcommunity.microsoft.com/t5/microsoft-teams-blog/microsoft-teams-is-shaping-the-future-of-work-with-low-code-apps/ba-p/1507180">https://techcommunity.microsoft.com/t5/microsoft-teams-blog/microsoft-teams-is-shaping-the-future-of-work-with-low-code-apps/ba-p/1507180</a>" Microsoft Teams blog.</p>
<b>MS How does it affect me</b>	<p>Select Microsoft 365 and Office 365 subscriptions that include Power Apps and Power Automate are expanding with the introduction of Microsoft Project Oakdale – a built-in, flexible datastore supporting relational, image and file data with a one-click experience for deploying solutions natively in Teams.</p> <p>Your users will be able to access these public preview features in Teams beginning in mid-September.</p> <p>With Project Oakdale, Power Apps will provide an integrated app studio that lets users build and deploy custom apps within Teams.</p> <p>Your end users will also be able to build and deploy custom chatbots in Teams with the introduction of Power Virtual Agents.</p> <p>We are also adding Power Automate capabilities, including the ability to trigger flows directly from Teams messages.</p> <p>This new Power Platform functionality for Teams is included at no additional cost with your Microsoft 365 and Office 365 licenses. Existing Power Platform functionality available for use in Office 365 more broadly outside of Teams remains unchanged.</p>

check before:

**08/05/2020**

In March '20 we sent MC207028 advising customers that Microsoft will start to notify users in Outlook that they can get Outlook for iOS and Android for certain customers in select markets.

This message is to let you know that this change now applies to customers worldwide including customers that:

Subscribed to education Office 365 and Microsoft 365 plans  
Are in the European Union and European Economic Area

Key points:

Timing: August 12, 2020

Control: Admin control via PowerShell for Outlook on the web

Action: review and assess

With deep integration across OneDrive, Teams and Office apps, Outlook is the best way to experience Microsoft 365 on a mobile device. Outlook mobile integrates Microsoft 365 enterprise-grade security to protect company data for a mobile workforce with built in protection against viruses, spam, phishing attacks and other threats. Many customers are not aware they can get additional functionality and commercial use rights to Outlook mobile as part of their Office 365 and Microsoft 365 services at no extra cost.

Note: These changes do not apply for customers subscribed to government Office 365 and Microsoft 365 plans.

Status:

Created: 07/30/2020

Product: Outlook

Platform: Android, iOS, mobile

Scope: Administration, Security, User, MDM

Ring:

<b>Links</b>	MC207028
<b>Docu to check</b>	Automation / Scripts, User Knowledge base, Service Description
<b>Linked Item Details</b>	MC207028 Title : (Updated) Notifications in Outlook to obtain Outlook for iOS and Android on mobile devices
<b>More Info URL</b>	<a href="https://docs.microsoft.com/en-us/powershell/module/exchange/set-organizationconfig?view=exchange-ps">https://docs.microsoft.com/en-us/powershell/module/exchange/set-organizationconfig?view=exchange-ps</a>
<b>MS Preperations</b>	<p>If you prefer that users in your organization do not see notifications about Outlook mobile in Outlook on the web, you can block these notifications by using the MobileAppEducationEnabled cmdlet control.</p> <p>In a later release, this same cmdlet will be able to manage notifications in Outlook for Windows too but for now, you can complete</p> <p>"<a href="https://forms.office.com/Pages/ResponsePage.aspx?id=v4j5cvGGr0GRqy180BHbRwg9nWCHIKdPt4ciXDoXgd9UNDFTQklRVk0yNjIMQTlyVIBBVVNVDhaUi4u">https://forms.office.com/Pages/ResponsePage.aspx?id=v4j5cvGGr0GRqy180BHbRwg9nWCHIKdPt4ciXDoXgd9UNDFTQklRVk0yNjIMQTlyVIBBVVNVDhaUi4u</a>" this form to submit your request to block these notifications in Outlook for Windows. You will need to provide your tenant ID. Requests will take 7 days to take effect (you will not receive a confirmation that your request has been received or processed).</p>
<b>MS How does it affect me</b>	Users who use Outlook with their work or school accounts but are not using Outlook mobile may see a notice that they can get Outlook for their phone. If they dismiss the notice or start to use Outlook mobile, the notification will not reappear. A quick link or scannable code will be provided to simplify downloading the app to the mobile device of their choice.

Usage reports in the Microsoft 365 Center and Teams Admin Center will be updated to align with one another and ensure they are consistent with how Teams “active user” is already defined in Microsoft’s financial reporting and public disclosures. In those disclosures, we define “Daily Active User” as the maximum daily users performing an intentional action in the last 28-day period across the desktop client, mobile client and web client. Examples of an intentional action includes starting a chat, placing a call, sharing a file, editing a document within teams, participating in a meeting, and others. We strip out passive actions like auto boot, minimizing a screen, or closing the app. We also de-duplicate all actions across a single user ID.

With this update, the definition of “active user” in the Microsoft 365 and Teams Admin Centers will align with the definition for “Daily Active User” to include a more comprehensive set of intentional user actions and provide visibility into the use of more recently added features such as priority notifications. The usage reports will include usage of the free version of Teams in addition to users covered by paid licenses, for those organizations that have a combination of free and paid.

These updates to usage reports will provide customers with more accurate and granular visibility into how users in your organization are using Teams. In many cases these changes will result in changed usage numbers than previous reports were showing.

This message is associated with Microsoft 365 Roadmap ID

"<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66163>" 66163

When this will happen:

We will begin rolling this out at the end of August and expect to be complete by mid-September.

**Service reminder: Skype for Business Online is retiring in 12 months****MC219641**

As Microsoft Teams has become the core communications client for Microsoft 365, this is a reminder the Skype for Business Online service will retire July 31, 2021. At that point, access to the service will end. Note: Neither the Skype consumer service nor Skype for Business Server deployments will be affected by the retirement of the Skype for Business Online service. Current Skype for Business Online customers will experience no change in service up to the retirement date. Support for the integration of third-party party Audio Conferencing Providers (ACP) into Skype for Business Online will continue through the end of service July 31, 2021.

**MS Preperations**

Instead of using DMG, we recommend moving to PKG as soon as possible.

**MS How does it affect me**

You are receiving this message because our reporting indicates one or more users in your organization are potentially using this DMG approach. Starting on August 7th your users will receive an in app notice of the upcoming change via a dismissible banner with a link to a download of the PKG file. After October 6th, 2020, there will be a redirect in place for clients running Teams on DMG, where they will be referred to a PKG download of the application. Users will no longer be able to use versions of Teams running from the DMG, when this change is implemented.

## **(Updated) Microsoft Authenticator App Lock will be enabled by default**

**MC220224**

check before:

**08/19/2020**

Updated September 15, 2020: We have completed the rollout for iOS. The rollout for Android is taking longer than expected. We apologize for the inconvenience. Please see the updated roll-out timeline below

If you do not have users who are using the

"<https://docs.microsoft.com/azure/active-directory/user-help/user-help-auth-app-overview>" Microsoft Authenticator app on their mobile devices for two-factor authentication, you may safely ignore this message.

Microsoft Authenticator "<https://docs.microsoft.com/azure/active-directory/user-help/user-help-auth-app-faq>" App Lock will soon be "<https://techcommunity.microsoft.com/t5/azure-active-directory-identity/microsoft-authenticator-app-lock-now-enabled-by-default/ba-p/1257368>" enabled by default if the user has set up a PIN or biometric on the device.

When this will happen

For iOS, we are rolling this out gradually in mid-August and should be complete by the end of August. Complete

For Android, we are rolling this out gradually in late September (previously August) and should be complete by mid-October (previously mid-September).

We shared last year that Microsoft is enabling individuals and teams to purchase select services directly. Today we are announcing that self-service purchasing capabilities are coming soon for Microsoft Project and Microsoft Visio products. Individuals worldwide (excluding India) will be able to acquire a subscription for these products as early as September 15, 2020:

"https://products.office.com/visio/visio-plan-1?activetab=pivot:overviewtab"

Visio Plan 1 and "https://products.office.com/visio/visio-plan-

2?rtc=1activetab=pivot:overviewtab" Visio Plan 2

"https://products.office.com/project/project-plan-

1?activetab=pivot%3aoverviewtab" Project Plan 1 and

"https://products.office.com/project/project-plan-

3?activetab=pivot:overviewtab" Project Plan 3

Note: This change will not impact any existing settings you may have in place to manage self-service purchasing. Additionally, self-service purchase capabilities are not available for customers who are eligible for Government or Education offers.

Status:

Created: 08/13/2020

Product: Project, Visio

Scope: Administration, Licensing, Compliance

Ring:

**Docu to check** Service Description, Automation / Scripts

**MS Preperations** Ensure your settings are configured correctly to manage self-service purchasing as appropriate for your organization.

Additionally, to help prepare your organization for the release of self-service purchase for Project and Visio, check out these additional resources:

"https://support.office.com/article/project-training-63f1db89-1ee0-4113-bedc-03fc5ec6223a" Project training resources

"https://docs.microsoft.com/ProjectOnline/project-online" Project Admin Guide

"https://support.office.com/en-us/article/visio-training-e058bcfa-1d90-4653-afc6-e84d54cf94a6" Visio training resources

"https://docs.microsoft.com/en-us/microsoft-365/admin/admin-home?view=o365-worldwide" Office Admin Guide

**MS How does it affect me** As an administrator, if you prefer to limit these capabilities, you can do so on a per-product basis.

Project and Visio are available for control starting today via

"https://www.powershellgallery.com/packages/MSCommerce/" PowerShell. You can also take control of any of your user's self-service purchases, allowing you to move them from a self-service purchase to another license or to cancel their subscriptions completely. Additionally, we've released the ability for users who are prevented from making their own purchases to make a request for a license or for you as an admin to point users to an existing license request process. These features will give you the ability to control how users acquire software within your organization.

For additional information on controlling self-service purchase, see

"https://www.powershellgallery.com/packages/MSCommerce/" AllowSelfServicePurchase for the MSCommerce PowerShell module.

For questions about self-service purchase, including how it may impact your organization, please refer to the "https://aka.ms/self-service-purchase-faq" self-service purchase FAQ.

The following pages in the classic SharePoint admin center have been replaced by pages in the new SharePoint admin center and will be removed/retired: “Site Collections”, “Sharing”, “Access control”, and “Geo locations”.

Key points:

Major: Retirement

Timing: the change will roll out incrementally over several months. Once the banner appears on your tenant’s classic pages, the transition will happen 30 day later.

Action: review and assess

You may consider updating your training and documentation as appropriate.  
For admins:  
"https://docs.microsoft.com/sharepoint/site-collections-page" Find site collection features in the new SharePoint admin center.  
"https://docs.microsoft.com/sharepoint/control-access" Find access control features in the new SharePoint admin center.  
"https://docs.microsoft.com/sharepoint/sharing-settings" Find sharing settings in the new SharePoint admin center.  
"https://docs.microsoft.com/sharepoint/manage-geo-locations" Find geo location features in the new SharePoint admin center.

**MS How does it affect me** Admins will start to see a banner on these four classic pages. The banner will display the date when the page will be retired along with a link to documentation that describes where to find all the features in the new admin center. Sample below:

After the retirement date, these classic pages will be replaced with redirect pages to the new SharePoint admin center so that any bookmarks continue working. Sample below

It's not possible to opt out of this change and preserve these pages.

We are making changes to how Teams meetings and join links are accessible for meeting organizers who have had their scheduling capabilities revoked. Today, Teams meeting URLs can be accessed before, during, and after the scheduled meeting time, even if the scheduling permission for the meeting organizer has been revoked after the meeting was created.

To implement this change, we are adjusting the behavior of some settings in csTeamsMeetingPolicy to give additional control to the Tenant Admins. Tenant admins can now control and define the expiration of meetings created and scheduled by their users.

This change does not impact any scheduled meetings for organizers who continue to have the ability to schedule Teams meetings (as defined by Meeting Policy). You can find additional details on this change below.

Key points:

Microsoft 365 Roadmap ID: "<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66921>" 66921

Timing: start rolling out in early September and complete by the end of September.

Docu to check	User Knowledge base, Working instructions for IT Support
Linked Item Details	<p>66921 Title : Microsoft Teams: Updated meeting creation and expiration policies</p> <p>66921 Description: We are making changes to how Teams meetings and join links are accessible for meeting organizers who have had their scheduling capabilities revoked.</p>
MS Preperations	<p>If you have users who have been assigned any of these settings with value "False" (or policy toggle OFF) you may consider notifying those users about the impact.</p> <p>If you would like users to continue to access previously created meetings you may consider changing their settings to "True," or have an individual with appropriate policy settings, create a replacement meeting.</p> <p>Additional information about meeting policies are explained here:</p> <p>"<a href="https://docs.microsoft.com/MicrosoftTeams/meeting-expiration">https://docs.microsoft.com/MicrosoftTeams/meeting-expiration</a>" Meeting policies and meeting expiration in Microsoft Teams</p>

**MS How does it affect me** Once this change is implemented, users who have any of these policies set to "False" will see a change in experience.

What does it mean to expire meeting join coordinates?

Once a meeting has been expired, the meeting can no longer be joined, whether through the meeting join link and/or Audio Conferencing—attempts to join the meeting will result in a failure. Any related conversations, files, whiteboards related to the meeting are preserved and unaffected, and can still be accessed. This includes channel meetings (both scheduled and meet now), scheduled meetings, and private meet now meetings.

Toggling policies from ON -> OFF

When a particular meeting type policy/knob is ON, users can create and schedule meetings and everyone can join. Once the knob is OFF, users are unable to create or schedule new meetings of that type. At the same time, we will expire that user's previously scheduled meetings to reflect their new abilities, including any meetings that they created and hosted in the past when they were allowed had the necessary permissions. This will ensure that there are no remaining, previously-joinable meetings that the user may have created that are no longer allowed.

Toggling policies from OFF -> ON

Toggling the policy from OFF to ON will enable the assigned user to create the respective meeting type. In the event that a user's meeting scheduling permissions were disabled and have been re-enabled (meeting type policy knob is ON), any previously scheduled (and expired) meetings in the past will be enabled and can be accessed with the former join links. This can be useful in the event that a user's permission was inadvertently disabled.

Expiring Scheduled Private Meetings

AllowPrivateMeetingScheduling (Control – schedule private meetings from Teams client)

AllowOutlookAddin (Control – schedule private meetings from Outlook, Win/OWA/Mobile)

To expire all private meetings (both scheduled and held in the past, as well as those scheduled in the future) of a given user (where they are the meeting organizer), turn off both

AllowPrivateMeetingScheduling and AllowOutlookAddin by setting to False (OFF) for the meeting organizer (Host)

This will prevent the joining of:

all meetings which happened in the past scheduled by this user.

all meetings which are already scheduled but will happen in future.

future instances of any ongoing recurring meeting scheduled by the individual user.

Special considerations:

If your Outlook scheduling is True (via AllowOutlookAddin=TRUE) and Teams scheduling is off (via AllowPrivateMeetingScheduling=False), your existing meetings will be unaffected by this change.

If your Outlook scheduling is False and Teams scheduling is true, your existing meetings will be unaffected by this change.

Expiring Scheduled Channel Meetings for a given meeting host/organizer

Turn off AllowChannelMeetingScheduling to False to expire all the past and future (already scheduled) channel meeting of a given user (where she is the meeting organizer).

This will prevent the joining of:

all meetings which happened in the past scheduled by this user.

all meetings which are already scheduled but will happen in future.

future instances of any ongoing recurring meeting scheduled by the individual user.

Expiring Private Meet Now meetings already started by a given user

Turn off AllowPrivateMeetNow to False so that any previous Meet Now instances created by that user is expired.

This will prevent join of all meetings which happened in the past scheduled by this user.

Expiring Channel Meet Nows started by a given user

Turn off AllowMeetNow to False so that all the previous Meet now ad-hoc meetings created by this user in Channels created by that user is are expired.

This will prevent join of all meetings which happened in the past scheduled by this user in Channels.

Special considerations:

The impacted users can continue to join meetings created/organized by other users.

Access to meeting artifacts (meeting chat, notes, recordings, transcripts, files, etc.) will remain available and will not be deleted.

When the invite involves a delegate relationship between a boss/admin, the Meeting Policy applied to the meeting is the Meeting Policy of the boss, who is the creator of the meeting.

<p>In order to provide the best experience for our customers, we will be focusing our efforts on modern browser support over the coming year. As a result, Microsoft 365 services and applications will no longer support Internet Explorer 11 (IE 11); Microsoft 365 apps and services will be unable to connect, or have a degraded feature experience, when accessed on IE 11. Additionally, the Microsoft Edge Legacy desktop application will experience end of support; after support ends, it will not receive new security updates. The following notification outlines key dates which you should be aware of. Please note that the IE 11 changes are specific to Microsoft 365 services and apps; IE 11 is a component of the Windows operating system and will</p> <p>"https://docs.microsoft.com/lifecycle/faq/internet-explorer-microsoft-edge" follow the Lifecycle Policy for the product on which it is installed.</p> <p>Microsoft Teams (web app)</p> <p>Timing: The Microsoft Teams web app will no longer support Internet Explorer 11 beginning November 30, 2020.</p> <p>Action: To access Microsoft Teams, use the Win-32 app, the new Microsoft Edge, or another supported browser.</p> <p>Microsoft 365 applications and services (excluding Microsoft Teams)</p> <p>Timing: Microsoft 365 apps and services (excluding Microsoft Teams) will no longer support Internet Explorer 11 beginning August 17, 2021.</p> <p>Action: To access Microsoft 365 apps and services, use the new Microsoft Edge, another supported browser, or an applicable Win-32 app (if available).</p> <p>Microsoft Edge Legacy desktop application</p> <p>Timing: End of support for the Microsoft Edge Legacy desktop app will occur on March 9, 2021.</p> <p>Action: To continue using a supported browser, transition to the new Microsoft Edge.</p>		

<b>Docu to check</b>	Service Description, Automation / Scripts, User Knowledge base, Working instructions for IT Support
<b>MS Preperations</b>	<p>To address these announcements, upgrade to the new Microsoft Edge prior to the dates indicated. Microsoft 365 apps and services will continue to support the new Microsoft Edge.</p> <p>The new Microsoft Edge is the planned replacement for Microsoft Edge Legacy; if you already have the new Microsoft Edge on your device(s), no action is required.</p> <p>Additional Information</p> <p>If you'd like help to upgrade all your organization's devices to the new Microsoft Edge, "<a href="https://docs.microsoft.com/fasttrack/win-10-microsoft-edge-assistance-offered">https://docs.microsoft.com/fasttrack/win-10-microsoft-edge-assistance-offered</a>" FastTrack can help with deployment and configuration at no additional charge for customers with eligible Microsoft 365 subscriptions.</p> <p>For help with web app and site compatibility, "<a href="https://docs.microsoft.com/fasttrack/win-10-app-assure-assistance-offered">https://docs.microsoft.com/fasttrack/win-10-app-assure-assistance-offered</a>" learn more about the App Assure program.</p> <p>"<a href="https://aka.ms/AA99plv">https://aka.ms/AA99plv</a>" Read more about these changes in the Lifecycle announcement." "<a href="https://aka.ms/AA97tsw">https://aka.ms/AA97tsw</a>" Our blog also provides more information about these announcements.</p> <p>We always value feedback and questions from our customers. Please feel free to submit either feedback or questions via Message Center.</p>
<b>MS How does it affect me</b>	<p>After the dates listed above, Microsoft 365 apps and services will need to be accessed via the new Microsoft Edge, another supported browser, or through an applicable Win-32 app (if available). The new Microsoft Edge browser provides a faster, more responsive experience for Microsoft 365 apps and services. You can also still run business-critical, Internet Explorer-based apps and sites in the new Microsoft Edge through Internet Explorer mode.</p> <p>After March 9, 2021, the Microsoft Edge Legacy desktop application will no longer be supported and will not receive new security updates. Move to the new Microsoft Edge before that date to ensure your organization is using an up-to-date browser.</p>

---

Updated August 28, 2020: We've updated this post to ensure that it is appropriately visible for organizations. There is no change to the content. When a user runs an Office app, such as Word or Excel, diagnostic information is collected and saved to log files on the user's device. These log files contain information about the processes and components running in the application, and can help detect, diagnose, and fix issues and help make improvements to Office. This information is very similar to optional diagnostic data that may already be collected subject to applicable privacy settings, but is more detailed and helps provide more context about technical issues that might occur when using Office apps.

We want to let you know that these log files could be sent to Microsoft only if you have chosen to enable the collection and processing of "https://docs.microsoft.com/deployoffice/privacy/optional-diagnostic-data" optional diagnostic data by Microsoft. Note that even when you've enabled the processing of optional diagnostic data, Microsoft may not always collect these log files. We would process these files only in those situations where we think the additional information could be useful in resolving an issue.

Key points:

Timing: If you have enabled the collection and processing of optional diagnostic data, it will begin in mid September.

Controls: Admin - "https://docs.microsoft.com/en-us/deployoffice/privacy/manage-privacy-controls#policy-setting-for-diagnostic-data" Policy setting for diagnostic data

Action: review and assess impact

The change will initially apply to Office on devices running Windows, beginning with Version 2008 of Microsoft 365 Apps in Current Channel.

Log files could be sent for the following Office apps:

- Excel
- OneNote
- PowerPoint
- Word

Log files could also be sent for Version 2008 and later of Project and Visio.

In the coming months, this change will also apply to Outlook as well as Office running on Mac, iOS, and Android devices.

For the latest information about which versions of Office and which operating systems this change applies to, see

"https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf" Overview of diagnostic log files for Office

check before:	08/25/2020
Status:	
Created:	08/19/2020
Product:	Office app, OneNote, Outlook, Project, Visio
Platform:	Android, iOS, Mac, Windows Desktop
Scope:	Administration, User, Compliance
Ring:	

<b>Docu to check</b>	Working instructions for IT Support
<b>MS Preperations</b>	<p>No specific action is required on part. If you have chosen to allow optional diagnostic data to be sent to Microsoft, then these log files may be sent to Microsoft.</p> <p>If you don't allow optional diagnostic data to be sent to Microsoft, these diagnostic log files will still be created and saved on the user's device, but the log files will not be sent to or processed by Microsoft.</p>
<b>MS How does it affect me</b>	<p>These log files don't include a user's name or email address, the content of the user's files, or information about apps unrelated to Office.</p> <p>These log files can help detect, diagnose, and fix issues and help make improvements to Office. For example, the additional information in these log files could help us identify the underlying reason why a user has a problem saving a file to the device running Office. In those situations, it would be beneficial for those log files to be sent to Microsoft.</p> <p>The log files are initially saved under %temp%\Diagnostics on devices running Windows. These files are in CSV format and can be viewed using applications like Excel.</p> <p>For more information about these log files, see "<a href="https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf">https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf</a>" Overview of diagnostic log files for Office.</p> <p>You can use the Diagnostic Data Viewer (DDV) to see when these log files are sent to Microsoft. The DDV also shows the location on the user's device where you can find a copy of the log files that are sent to Microsoft. For more information about the DDV, see "<a href="https://support.microsoft.com/office/cf761ce9-d805-4c60-a339-4e07f3182855">https://support.microsoft.com/office/cf761ce9-d805-4c60-a339-4e07f3182855</a>" Using the Diagnostic Data Viewer with Office.</p>

## **(Updated) New Microsoft Teams meeting pre-join experience**

**MC220785**

Updated September 22, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

Our new pre-join experience makes it easier for users to select audio and video sources before joining a Teams meeting.

All the available Audio options are now clearly detailed to the right of the preview window with the option to configure mic status, speaker volume, devices and ability to add a Teams meeting room.

Image

<b>Microsoft 365 admin center: Microsoft 365 Priority Accounts</b>		<b>67145</b>
As the admin of a Microsoft 365 organization, you can now monitor failed or delayed email messages sent to your users who have a high business impact, like your CEO. You can enable this by adding users to your priority accounts list. Priority accounts are accounts that are essential to running your organization. Add executives, leaders, managers or other users who have access to sensitive or high priority information. The priority accounts feature is available only to organizations that meet both of the following requirements: Office 365 E3 or Microsoft 365 E3, or Office 365 E5 or Microsoft 365 E5; and at least 10,000 licenses and at least 50 monthly active Exchange Online users.		<div>check before: 08/31/2020</div> <div>Status: Rolling out</div> <div>Created: 09/25/2020</div> <div>Product: Exchange, Microsoft 365 admin center</div> <div>Platform: Online, World tenant</div> <div>Scope: Administration, Compliance, Licensing</div> <div>Ring: General Availability</div>

## Legacy OME support in Outlook for iOS slated for retirement

MC220872

Outlook for iOS version 4.53.0 and above will no longer support legacy Office Message Encryption (OME) as part of our ongoing retirement of legacy OME environments.

NOTE: This change affects only organizations that use legacy OME capabilities in Office 365.

If you are unsure of whether your organization uses legacy or new OME capabilities, please review "<https://docs.microsoft.com/microsoft-365/compliance/legacy-information-for-message-encryption>" Legacy information for Office 365 Message Encryption.

When this will happenThis change will be effective on September 23, 2020.

**09/04/2020**

Updated September 15, 2020: As announced in latest update to MC221113, additional time was needed to complete validations before deploying change and enforcing the Auto Forward Policy. We have completed all validations and will resume deployment of this policy on September 16, 2020.

Status:

**In development**

As a reminder the Auto-Forwarding Policy will be enforced for tenants who have configured their policy to "On" or "Off". For tenants that have made no changes and have no users externally forwarding prior to September 15, 2020 the setting "Automatic" will default to "Off" and automatic forwarding will be disabled. For organizations that have some users externally forwarding prior to September 15, 2020 the setting "Automatic" will default to "On" and we will contact you separately when this will change for your tenant.

Note: If you have configured your Auto Forward policy to "Off" at this time externally forwarded mail will not be blocked.

Updated September 8, 2020: As announced in MC221113 (August 28th), on September 1st, 2020 the Auto-Forwarding Policy was planned be enforced for tenants who have configured their policy to "On" or "Off", this includes tenants that had users external forwarding prior to September 1st 2020.

We have determined that we need additional time to complete validations before we can deploy this change and enforce the policy action. Once we have completed the additional validations, we will send an updated message center post confirming when the policy will be enforced. Original message below for reference.

As originally announced in MC218984 (July '20) automated external email forwarding is a tactic attackers use to exfiltrate data out of an organization. To counter that, we are updating our outbound anti-spam policies. First, we are providing a control to easily enable automatic external forwarding for select people in your organization. Second, we will change the "Automatic" setting to block automatic external forwarding. Internal automatic forwarding of messages will not be impacted by this change. On September 1st, 2020 the Auto-Forwarding Policy will be enforced for tenants who have configured their policy to "On" or "Off". For tenants that have made no changes and have no users externally forwarding prior to September 1st 2020 the setting "Automatic" will default to "Off" and automatic forwarding will be disabled. For organizations that have some users externally forwarding prior to September 1st 2020 the setting "Automatic" will default to "On" and we will contact you separately when this will change for your tenant.

NOTE: No action is needed if you don't want to allow any users to automatically forward messages externally or if no one in your tenant is currently doing so. Additionally, we understand that some organizations already have users automatically forwarding messages outside the organization and we will provide additional time and communications to enable transition to the new policy controls. For these organizations we will communicate via Message center with more details on when the change will impact your specific tenant.

Security, User

<b>Links</b>	63831,MC218984
<b>Docu to check</b>	Working instructions for IT Support, User Trainings, Service Description
<b>Linked Item Details</b>	<p>63831 Title : Office 365 ATP: External Email Forwarding Controls</p> <p>63831 Description: External forwarding of email is a tactic used by attackers to exfiltrate data out of an organization and controlling that process is difficult. With this new feature we are adding support for more granular controls that allow the Office 365 administrators to easily enable external forwarding for the right people in the organization through the outbound spam policy. We are also moving to disable external forwarding by default so organizations are secure by default.</p> <p>MC218984 Title : Office 365 ATP: External email forwarding controls and policy change</p>
<b>MS Preperations</b>	<p>To prepare for the changes we recommend that all administrators do the following by August 28, 2020.</p> <p>Use the "<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/mfi-auto-forwarded-messages-report">https://docs.microsoft.com/microsoft-365/security/office-365-security/mfi-auto-forwarded-messages-report</a>" Auto-forwarded messages report to identify which users in your tenant are automatically forwarding messages outside the organization. Focus on users with either SMTP forwarding or Inbox rules. Exchange transport rules (ETRs) are unaffected by this change.</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy">https://docs.microsoft.com/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy</a>" Configure the outbound spam policies to allow automatic external forwarding for either your entire organization or specific users.</p> <p>For more information, please see "<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/external-email-forwarding">https://docs.microsoft.com/microsoft-365/security/office-365-security/external-email-forwarding</a>" Configuring and controlling external email forwarding in Office 365.</p>
<b>MS How does it affect me</b>	<p>In this initial release we will provide updated controls for administrators to configure their outbound antispam policies, "<a href="https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy?view=o365-worldwide#use-the-security--compliance-center-to-create-outbound-spam-policies">https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy?view=o365-worldwide#use-the-security--compliance-center-to-create-outbound-spam-policies</a>" via PowerShell and the Security and Compliance Center console, but will not be enforcing the actions so that administrators have an opportunity to configure the settings first. You will be able to determine who will be allowed to automatically forward email using inbox rules, or SMTP forwarding, outside of the organization.</p> <p>There is no impact on external forwarding in this update, however automatic forwarding will be disabled based on the policy in a future update currently planned for September 1, 2020 and we will communicate via Message center. Once the policy takes effect messages that are being automatically forwarded outside the organization will be blocked and non-delivery report (NDR) will be sent to the user.</p>

---

The “In development for Microsoft Intune” page in our documentation has been updated.

How does this affect me?

The In development page provides a list of features in upcoming releases of Microsoft Intune to assist in your readiness and planning. The list has now been updated. You’ll start seeing these changes in the next month or in a subsequent release.

What do I need to prepare for this change?

You can inform your IT staff and helpdesk of the upcoming changes listed on this page. Plan to update your end user guidance, if you feel any of these features would be important to your end users.

Click Additional Information for the link to the In development page.

Note: If your organization is not utilizing these methods you can safely disregard this message.			
Key points:			
Major: Retirement			
Timing: early October 2020 to mid-October 2020			
Action: review and assess organizational impact			
<b>Docu to check</b>	Automation / Scripts, Working instructions for IT Support		
<b>MS Preperations</b>	For admins and developers: If your software is currently calling any of the five aforementioned SoapServer endpoints, you'll need to modify the software to instead call methods in the LimitedWebPartManager class of the SharePoint CSOM (version 16.1.20324.12000, or newer). This class includes a new HasWebPartConnections property that allows you to determine whether a web part page connection exists. Learn more "https://www.nuget.org/packages/Microsoft.SharePointOnline.CSOM/" Download CSOM Nuget Package "https://docs.microsoft.com/en-us/previous-versions/office/sharepoint-csom/ee538367(v=office.15)" CSOM LimitedWebPartManager methods "https://docs.microsoft.com/en-us/sharepoint/dev/sp-add-ins/complete-basic-operations-using-sharepoint-client-library-code" Complete basic operations using SharePoint client library code		
<b>MS How does it affect me</b>	The affected methods in the SharePoint SoapServer were called primarily to migrate web parts from classic SharePoint sites to SharePoint Online. Once these methods are retired, they will no longer return any data. You can find alternative methods in the SharePoint Client-Side Object Model (CSOM) to achieve this functionality.		

## Change to the minimum iOS system requirements for Outlook for iOS and watchOS

MC221506

		check before:	09/11/2020
We are changing the minimum iOS system requirements for Outlook for iOS and watchOS. Outlook for iOS is supported on the two most recent versions of iOS. With iOS 14 currently in beta, Outlook for iOS is preparing to remove support for iOS 12. In addition, once iOS 14 is released to GA, the system requirements for Outlook for iOS will be updated to reflect support for iOS 14. Microsoft will update the minimum system requirements for the Outlook for iOS app from iOS 12 to iOS 13. Additionally, Microsoft will remove support for watchOS 4 and 5. WatchOS 6 and 7 will be the only supported versions for Apple Watch.		Status:	
		Created:	09/05/2020
		Product:	Office app, Outlook
		Platform:	iOS, World tenant
		Scope:	User, MDM, Administration
		Ring:	
<b>Docu to check</b>	User Knowledge base, Working instructions for IT Support		
<b>More Info URL</b>	<a href="https://www.microsoft.com/en-us/microsoft-365/microsoft-365-and-office-resources">https://www.microsoft.com/en-us/microsoft-365/microsoft-365-and-office-resources</a>		
<b>MS Preperations</b>	You should consider updating your training and documentation as appropriate and communicate this change to your users to ensure they update their device operating system. Please click Additional Information to refer to the current minimum system requirements for Office 365.		
<b>MS How does it affect me</b>	After iOS 14 is released, Outlook devices running iOS 12, or lower will no longer receive Office app updates. At that time, customers will be able to continue to use the older version of Outlook for iOS. Once they update their device to iOS 13 or above, they will receive the newest version of Outlook. Over time, Outlook for iOS on iOS 12 devices will eventually stop synchronizing email and calendar data, unless they have a supported version of iOS. This change does not affect anyone using Outlook for iOS apps on iOS 13 or above.		

## Updates to Discover name, feed in Outlook for iOS

MC221542

		check before:	09/12/2020

As part of our efforts to improve the usability and discoverability of the "https://support.microsoft.com/office/ideas-in-excel-3223aab8-f543-4fda-85ed-76bb0295ffc4" Ideas feature in Excel, we are going to begin rollout of a naming update to highlight that the focus of this connected experience is to make Data Analysis simpler, faster and more intuitive. Note: this change does not impact functionality, only the name. The "remove Ideas button from the Ribbon" policy setting, which located under User Configuration\Policies\Administrative Templates\Microsoft Excel 2016\Intelligent Services, will not be affected during this change. In the next 3 months we will be retiring the Group Policy as the Ideas functionality is a "https://docs.microsoft.com/en-us/deployoffice/privacy/connected-experiences" Connected Experiences in Office and there are "https://docs.microsoft.com/en-us/deployoffice/privacy/manage-privacy-controls" new privacy policies for managing the experience. When this will happen We will be rolling out the naming change for Ideas in early October.

**Docu to check** User Trainings, User Knowledge base, Service Description

**MS Preperations** You may consider sharing the naming change with your help desk for awareness. Additionally, you should consider reviewing your Group Policy settings and ensure your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise are configured for the experience you wish to enable. Your feedback is important to us and ask that you let us know how you feel about the Ideas name changes. You can provide feedback by using the thumbs up or thumbs down at the top of this Message center post.

**MS How does it affect me** While this feature provides powerful capabilities we have found that it is not easily discoverable and we believe this may relate to the name of the capability. As such, starting in 30 days we will begin rollout of a new name for the Ideas feature to validate improved discoverability of this feature. To ensure the best result we will be updating the name to one that better reflects the feature's focus on Data Analysis Ideas. We will monitor for improved discoverability and make a decision of which name resonates best with your users before continuing rollout to the remainder of your user population. After the Group Policy setting is retired, whether users can use the feature will depend on your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise. Moving forward the the Ideas feature will only be managed as a "https://docs.microsoft.com/en-us/deployoffice/privacy/connected-experiences" Connected Experiences in Office, please review your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise and the "https://docs.microsoft.com/deployoffice/overview-office-cloud-policy-service" overview of the Office cloud policy service for Microsoft 365 Apps for enterprise.

As previously announced, starting on October 1, 2020, we will enable the 2020 Release Wave 2 across our global customer base. Your production environments will receive the mandatory update during one of the scheduled maintenance windows, based on your region.

**09/21/2020**

Updated September 22, 2020: We have updated this post to ensure it is displaying as intended.

Office has introduced a modern and OAuth based authentication mechanism in Office 2016 and Microsoft 365 Apps for enterprise Win32 clients. Modern auth has been the default way of authentication in Office apps since the release of Office 365 ProPlus, more than 4 years ago. We however allowed customers to override this behavior by setting a regkey EnableADAL to 0 so that they could continue to use the legacy form of authentication against Microsoft 365 resources like SharePoint. This legacy form of authentication was powered by a library called IDCRL. It should be noted that the legacy form of authentication for Exchange Online is basic auth, which is different from IDCRL.

Our data suggests that less than 1% of commercial/organization users have overridden the default setting and are still using IDCRL for authentication purposes in Microsoft 365 Apps for enterprise. Modern auth is a more secure way of signing-in. It also allows additional security features like AAD conditional access using multi-factor authentication and device compliance and policies around them.

We are going to remove support for IDCRL library in newer builds of Microsoft 365 Apps for enterprise so that applications like Word, Excel, PowerPoint, OneNote will always use modern authentication with Microsoft 365 resources. This change will not impact Outlook, which uses basic authentication to communicate with Exchange when the EnableADAL regkey is set to 0.

Key points:

Major: Retirement

Timing:

Starting with Current Channel of Microsoft 365 Apps for enterprise version 2010

Semi-Annual Enterprise Channel (Preview) starting version 2102 in March 2021

Semi-Annual Enterprise Channel in July 2021.

Action: No action, this is for awareness

**Docu to check**      Service Description, Automation / Scripts, Working instructions for IT Support, User Knowledge base

**MS Preparations**      There is nothing you need to do as this notice is for awareness.

**MS How does it affect me**      When the change is implemented, users may see a sign-in prompt on each impacted device.  
Note: this affects only newer builds of Microsoft 365 Apps for enterprise and does NOT impact Office 2016 and 2019 perpetual products.

MS Preperations	<p>Once available, this feature will be enabled by default if you have not customized the setting for your tenant.</p> <p>You can manage the feature through Microsoft 365 admin center. You can review the setting in advance and ensure it is set to the experience appropriate for your organization. You can change it at any time; any changes can take up to 24 hours to go into effect.</p> <p>If a user joined a personal (MSA) list when the setting was enabled and you later disable it, the sync between the user and owner will stop within 24 hours. However, the user may continue to see the list for more than 24 hours.</p> <p>You might consider updating your training and documentation as appropriate.</p> <p>How to change the admin setting</p> <p>The admin setting will enable you to restrict people in your organization from joining lists owned by people outside your organization. However, whether or not the setting is enabled, enterprise users will not be able to share their lists with external personal accounts.</p> <p>Go To Microsoft 365 admin center</p> <p>Select Settings in the left hand pane</p> <p>Select Org settings</p> <p>Under Services select Microsoft To Do</p> <p>Select the correct setting in the right-hand fly-out that says “Allow your users to join and contribute to lists shared from outside the organization”</p> <p>Save the settings</p>
MS How does it affect me	<p>A personal Microsoft account (MSA) is an email address used to sign in to Microsoft services like Office 365, Xbox consoles, or Windows 10 PCs. Users can associate any email address as the user name for their MSA, including addresses from Outlook.com, Hotmail.com, Gmail, Yahoo!, or other providers.</p> <p>A work or school account is managed through Azure Active Directory (Azure AD) for a Microsoft 365 tenant.</p> <p>Microsoft To Do will support "<a href="https://support.microsoft.com/office/create-and-share-lists-4e5aeac6-8649-4813-aae5-2c2ddea2f292">https://support.microsoft.com/office/create-and-share-lists-4e5aeac6-8649-4813-aae5-2c2ddea2f292</a>" list sharing between a personal account (MSA) and a work or school account (Azure AD).</p> <p>By default, users in your organization will be able to join, view, modify and add data to lists owned by an MSA.</p> <p>Users in your organization will not be able to share their lists with any account external to your tenant.</p> <p>Nor will users in your organization be able to join, view, modify or add data to lists owned by an external Azure AD account.</p>

---

## Reminder: Prepare for MDATP for Mac system extensions activation on macOS 11 Big Sur

---

MC222467

Note: this message applies only to organizations with macOS devices in their environments.

As originally communicated in MC218792 (July '20), when Apple announces general availability of macOS 11 Big Sur, Microsoft Defender ATP for Mac will activate a new system extension-based code path on all Mac devices protected by MDATP. The new code path will be activated immediately after devices upgrade to macOS 11 Big Sur.

Between now and macOS Big Sur general availability, you can evaluate the new MDATP for Mac implementation on Catalina devices that are registered for InsiderFast update channel.

The new code path can be activated on InsiderFast devices running macOS version 10.15.4 or later.

To ensure that the new Microsoft Defender ATP for Mac remains functional and effective immediately after device upgrade to macOS 11 Big Sur, a new remote configuration must be deployed to all macOS devices before Apple announces general availability of macOS 11 Big Sur. If the configuration is not deployed prior to Big Sur GA announcement, immediately after upgrade to Big Sur end-users will be presented with a series of system dialogs asking to grant MDATP agent all necessary permissions associated with the new system extensions.

### Key Points:

**Timing**The new configuration is available now.

MDATP for Mac's new code path can be evaluated now on Catalina devices in the InsiderFast update channel.

**Action:** Review and prepare ahead of Apple announcing the macOS 11 Big Sur general availability.

**(Updated) Prevent/Fix: Updates to on-premises sync-enabled user contact numbers are no longer allowed**

**MC222474**

Updated September 24, 2020: We have updated this post with a Blog link for more details.		check before:	<b>09/25/2020</b>
Starting near the beginning of October, updates to the mobilePhone property of on-premises sync-enabled users will no longer be allowed via Microsoft Graph, Azure AD Graph, or PowerShell. Updates to this property should instead be made in on-premises Active Directory and synced to the cloud. Updates to on-premises sync-enabled objects are not allowed because any changes to these objects are overwritten at the next Azure AD Connect sync cycle, since the source of authority of the objects is on-premises. <a href="https://docs.microsoft.com/en-us/graph/api/resources/user?view=graph-rest-beta#properties">"https://docs.microsoft.com/en-us/graph/api/resources/user?view=graph-rest-beta#properties"</a> Learn more about which user properties are read-only. 67114 Title : Microsoft To Do: Support for push notifications for shared list activities for work and school accounts  
67114 Description: This update adds the ability to create Microsoft To Do push notifications in Work and School accounts just as you can in your Personal account.

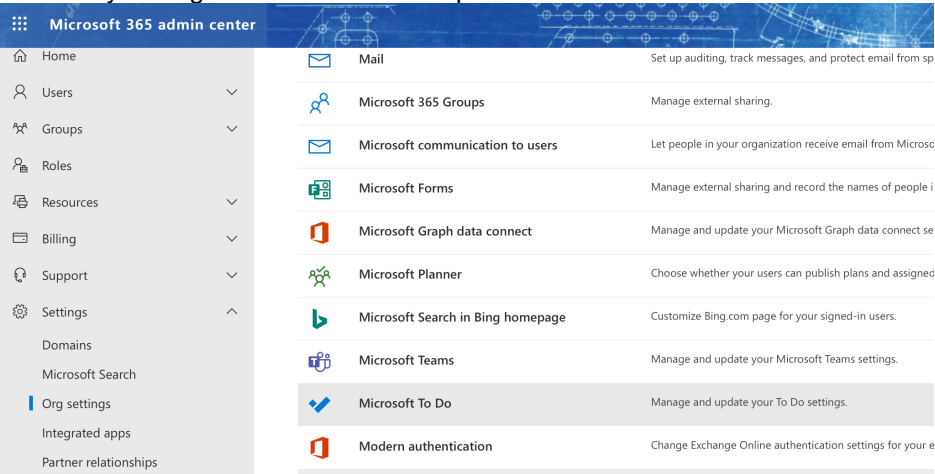

MS Preperations

The admin toggle will be accessible on September 22, 2020. You should review it to ensure that it is set to the experience appropriate for your organization. Any changes may take up to 24 hours to go into effect.  
Should you enable this feature in your tenant, you might want to update your training and documentation.  
To review or change the setting, go the Microsoft 365 admin center.  
Navigate to Settings > Org settings  
Under Services, select Microsoft To Do  
Select the box next to Allow your users to receive push notifications for shared list activities to turn push notifications on or off.

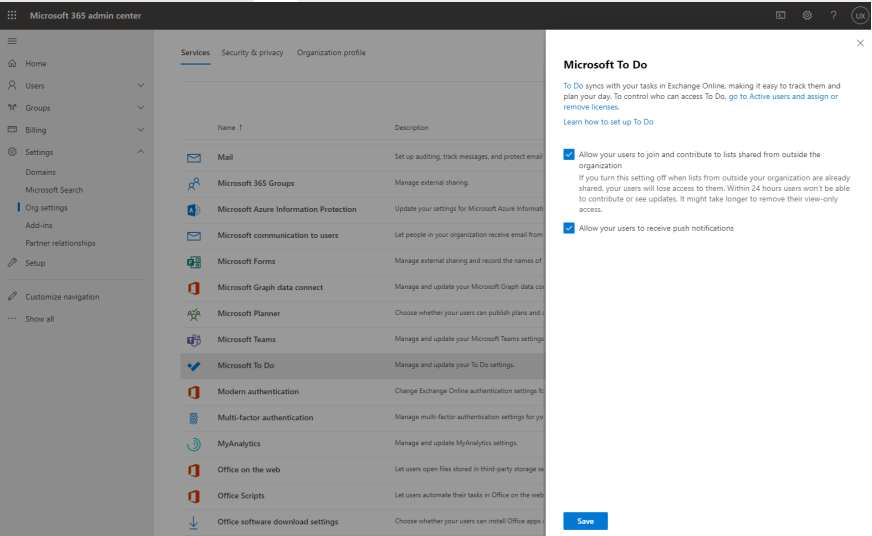

MS How does it affect me

This feature will be enabled unless you take action before Monday, October 19, 2020. On that date, users in your organization will receive push notifications for shared list activities.

MS Preperations	We encourage you to update your documentation to note the change in password settings. Learn more about password device restrictions on Android Enterprise "https://docs.microsoft.com/mem/intune/configuration/device-restrictions-android-for-work#password" here.
MS How does it affect me	This will not impact existing policies. However, newly created device password policies for Android Enterprise corporate-owned fully managed, dedicated, and COPE devices will now default to "Device Default" instead of "Numeric".

## What's New in the Microsoft Intune Service Update for September

MC222603

Your Microsoft Intune account has been updated to the latest service build.

How does this affect me?

You will see the service release number updated in the Tenant Status blade of the Intune console soon. We've introduced some changes that we're excited for you to try out.

What do I need to do to prepare for this change?

Click additional information below to learn more about what's new in this service release. We'll continue to update the What's New page with any features that are released between now and the next monthly service update.

More information on how the Intune service updates each month is in this blog post: "<https://techcommunity.microsoft.com/t5/intune-customer-success/microsoft-intune-service-updates/ba-p/358728>"

style="background-color: rgb(255, 255, 255)">Microsoft Intune Service Updates

## Reminder: Retiring SharePoint 2010 Workflows

MC222628

As communicated in MC217999 (July '20), with the continued investment in Power Automate as the universal solution to workflow, Microsoft is retiring SharePoint 2010 workflows.

Additionally, we will begin implementing a new banner (example text below) that will be displayed on multiple workflow pages to remind users about the upcoming retirement.

"Starting November 1, 2020 6:00:00 AM, SharePoint 2010 workflows will be retired and users will no longer have the ability to run or create 2010 Workflows. The date displayed in the banner applies to your specific organization. For general dates and information about retirement, visit "<https://aka.ms/sp-workflows-support>" style="" https://aka.ms/sp-workflows-support"

Key Points:

Major: Retirement

Timeline:

Starting August 1st, 2020, SharePoint 2010 workflows will be turned off for any newly created tenants.

Starting November 1st, 2020, Microsoft will remove the ability to run, or create, and or execute SharePoint 2010 workflows from existing tenants.

Action: Review and assess impact

Linked Item Details

61687 Title : Excel: Office Scripts for task and workflow automation in Excel

61687 Description: In January, we released Office Scripts, a feature that enables users to automate their repetitive tasks in Excel Online, for public preview. The feature will now be available by default to all M365 Enterprise, Business, and EDU SKUs that have access to the O365 desktop apps.

61687 Url : https://support.microsoft.com/en-us/office/introduction-to-office-scripts-in-excel-9f9be283d-adb8-4f13-a75b-a81c6baf163a

MS Preperations

This feature ships default On. If you would like to disable this feature, you need to act by October 1, 2020.

If you would like to "https://docs.microsoft.com/microsoft-365/admin/manage/manage-office-scripts-settings" manage how Office Scripts is used in your organization, go to the M365 admin center, select Settings > Org settings. Then, select Office Scripts to view the Office Scripts admin controls. These controls will be available on August 31, 2020.

To block Office Scripts use in your tenant, deselect 'Let users automate their tasks in Office on the web'. This will hide the Automate tab for everyone in your tenant.

This feature is on by default. Should you disable and then wish to enable the feature, select 'Let users automate their tasks in Office on the web'. The global admin can choose to either allow all users access or create a specific group of users who have access to Office Scripts.

Once the 'Let users with access to Office Scripts share their scripts with others in the organization' checkbox is selected, the global admin can also choose whether or not a user can share scripts within an organization. No external sharing is allowed.

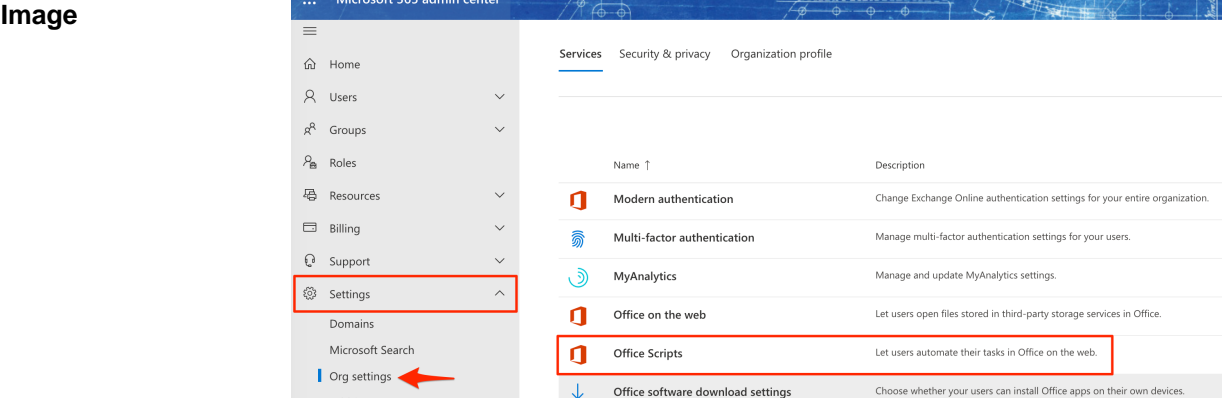

Note:

If your organization is not currently opted-in to the Office Scripts public preview experience, these controls will only affect Targeted Release users until the change is released to the rest of the organization.

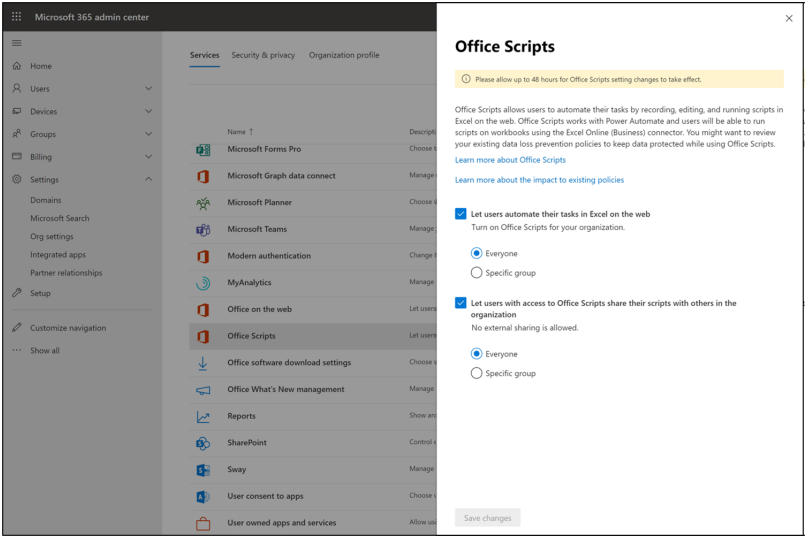

Learn more: "https://docs.microsoft.com/microsoft-365/admin/manage/manage-office-scripts-settings" Manage Office Scripts settings

MS How does it affect me

"https://support.microsoft.com/office/introduction-to-office-scripts-in-excel-9f9be283d-adb8-4f13-a75b-a81c6baf163a" Office Scripts is an automation platform in Excel Online that allows users in your organization to create and record scripts to automate their repetitive workflows. With this change, the feature will be available by default for your organization unless you take action.

Reminder: Change in Process to Contact Microsoft Defender ATP Support

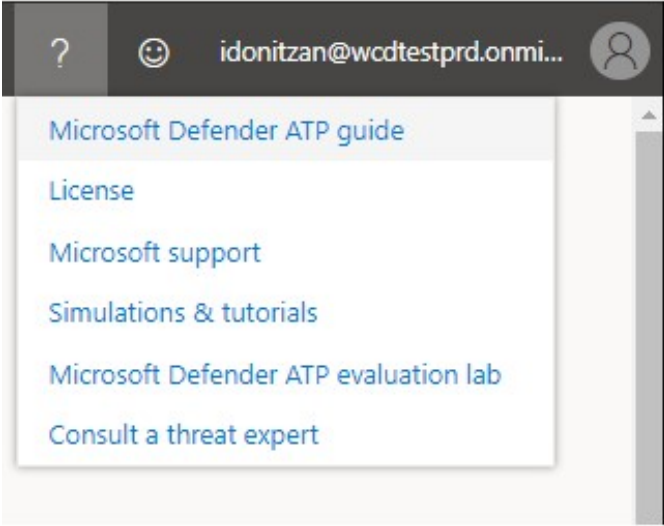

MC222822

As originally announced in MC218778 (July '20) the process for opening support cases for Microsoft Defender ATP has changed with the availability of the new support widget. We completed rolling out the change in mid-September. Additionally, we wanted to provide additional guidance on which roles are needed to submit a Support request.

As originally announced in MC200104 (January '20) we will be retiring legacy eDiscovery tools soon.

When this will happen

There are several key dates for this retirement and we're now approaching the October 1, 2020 milestone.

In-Place eDiscovery and Holds in the Exchange admin center (EAC)

July 1, 2020: You won't be able to create new searches and holds, but you can still run, edit, and delete existing searches at your own risk.

Microsoft Support will no longer provide assistance for In-Place eDiscovery Holds in the EAC.

October 1, 2020: The In-Place eDiscovery Holds functionality in the EAC will be placed in a read-only mode. This means you'll only be able to remove existing searches and holds.

\*-MailboxSearch cmdlets

July 1, 2020: You won't be able to use the New-MailboxSearch cmdlet to create new In-Place eDiscovery searches and In-Place Holds, but you can still use the other cmdlets to run, edit, and delete existing searches and holds at your own risk. Microsoft Support will no longer provide assistance for these types of searches and holds.

October 1, 2020: As previously stated, the In-Place eDiscovery Holds functionality in the EAC will be placed in a read-only mode. This also means that you won't be able to use the New-MailboxSearch, Start-MailboxSearch, or Set-MailboxSearch cmdlets. You'll only be able to get and remove existing searches and holds.

For more information, please see "<https://docs.microsoft.com/en-us/microsoft-365/compliance/legacy-ediscovery-retirement?view=o365-worldwide>" Retirement of legacy eDiscovery tools.

## Effects for Operations

additions from MC200104:  
Automatic assignments via Exchange / PowerShell of legal hold might break.

### Recommendations

additions from MC200104:  
Check your processes and tool, which set legal hold and eDiscovery functions and features, due to the retirement of Exchange Admin Center In-Place eDiscovery Holds, supporting cmdlets and EWS.

### Links

MC200104

### Description

additions from MC200104:  
Microsoft plans massive changes to the eDiscovery and legal hold features.

### Docu to check

Working instructions for IT Support, Service Description, Automation / Scripts

### Linked Item Details

MC200104 Title : (Updated) Retirement of Exchange Admin Center In-Place eDiscovery and Holds

MC200104 Url : <https://docs.microsoft.com/microsoft-365/compliance/legacy-ediscovery-retirement>

MC200104 Info Url : <https://docs.microsoft.com/microsoft-365/compliance/overview-ediscovery-20>

### More Info URL

<https://docs.microsoft.com/microsoft-365/compliance/legacy-ediscovery-retirement>

### MS Preparations

Migrate all usage to Microsoft 365 eDiscovery or appropriate alternatives. These are described at: "<https://docs.microsoft.com/en-us/microsoft-365/compliance/legacy-ediscovery-retirement>" Retirement of legacy eDiscovery tools. If you're interested in migrating existing In-Place eDiscovery searches and holds to the Microsoft 365 compliance center, please see "<https://docs.microsoft.com/en-us/microsoft-365/compliance/migrate-legacy-ediscovery-searches-and-holds?view=o365-worldwide>" Migrate legacy eDiscovery searches and holds to the Microsoft 365 compliance center.

### MS How does it affect me

Any holds created by using In-Place eDiscovery Holds in the EAC (or by using the corresponding cmdlet) will continue to preserve data. In-Place eDiscovery searches and holds can be removed at any time.

---

## Prevent/Fix: Shared mailboxes inaccessible due to license expired error

MC222773

A change was made to Exchange Online to correct the way unlicensed mailbox access is handled. This change may cause Shared mailboxes to be inaccessible due to a license expired error.

Note: If you are not experiencing the following license expired error you can safely disregard this message

"The mailbox isn't available. This may have occurred because the license for the mailbox has expired. To find out how to gain access to this mailbox again, contact the person who manages your email account."

	check before:	10/02/2020
Microsoft is updating our license overallocation process to:	Status:	
Improve the customer experience when executing specific license transition scenarios (like a step-up order or a seat reduction), and	Created:	09/26/2020
Avoid unintended license consumption.	Product:	Microsoft 365 admin center
Our updated license overallocation process permits a customer to temporarily have more licenses assigned to users relative to the number of licenses currently owned.	Platform:	World tenant, Online
Overallocation permits the customer to manage the transitioning of user license assignments to align with their new license types and counts while ensuring existing users have uninterrupted access to their services.	Scope:	Administration, Licensing
This updated process also supports automatic adjusts of overallocations on a periodic basis, eventually aligning with what the customer now owns.	Ring:	
A simple sample scenario:		
A customer currently has an E3 subscription for 300 seats. After November 2, 2020, all customers on an Enterprise Agreement will be limited to assigning up to 300 users to an E3 license.		
The customer subsequently places a “Step-up” order for 100 seats of E5. The customer now owns 200 E3 seats and 100 E5 seats.		
Prior to any overallocation process, up to 100 existing E3 users could have lost access to the service (100 more E3 licenses are assigned relative to the 200 now owned), even though 100 E5 licenses are now available.		
Under the original overallocation logic, there was a fixed amount of overallocation to ensure no user would lose services, however this did not adequately protect customers from overconsumption.		
With our updated overallocation logic, 100 E3 seats are automatically provided (matching what had been allocated), to ensure all existing E3 users will maintain access to their Microsoft 365 services. Additionally, as the customer transitions users, periodic adjustments are also made. e.g.:		
The customer subsequently transitions 75 users from E3 to E5.		
When a “periodic check” occurs, our logic recognizes the license transitions that have taken place and adjusts the overallocation down to 25 (from 100).		
Customers remain responsible for their license consumption, therefore the 100 E3 users should be transitioned to E5 as soon as possible to align assignments with what the customer owns now.		
Assuming the customer completed their license transitions to E5, when the next “periodic check” occurs, the remaining 25 seat overallocation will now be adjusted down to 0.		

<b>Docu to check</b>	Automation / Scripts, Working instructions for IT Support, Service Description
<b>MS Preperations</b>	<p>If you only assign licenses using the Microsoft 365 admin center User Interface, this message is for awareness only.</p> <p>If you utilize license assignment workflow automation (e.g. via PowerShell scripting) AND your automation logic permitted assigning more licenses than owned, you will need to update the automation logic to avoid an overallocation.</p> <p>To avoid potential process failure, update Automation logic before November 2, 2020.</p> <p>Note that already licensed users will not see any loss or impact to their service.</p> <p>If you utilize Group Based Licensing, you should periodically verify your available licenses are adequate for group membership counts.</p> <p>If you anticipate having an insufficient number of licenses to meet your needs, you may be able to place a license reservation on the "<a href="https://www.microsoft.com/Licensing/servicecenter/default.aspx">https://www.microsoft.com/Licensing/servicecenter/default.aspx</a>" Microsoft Volume Licensing Service Center.</p> <p>You may also want to contact your account team, reseller or partner, who can address questions and place orders on your behalf.</p> <p>Additional Information:</p> <p>Our updated license overallocation process only applies to the following license transition scenarios: step-up transitions, intentional true downs, returns and credit scenarios.</p> <p>To learn more about licensing, including License Reservations and how to make a License Reservation, please visit the "<a href="https://docs.microsoft.com/licensing/license-faq">https://docs.microsoft.com/licensing/license-faq</a>" Licensing FAQ.</p> <p>Microsoft values feedback and questions from our customers. Please feel free to reach out to your account team, reseller or partner for more information. You may also provide feedback or questions via Message Center.</p>
<b>MS How does it affect me</b>	<p>Our updated license overallocation logic has been enabled for all Enterprise Agreement customers.</p> <p>For customers who have not transacted a qualifying license transition order, any existing (fixed value) overallocation will be reset to zero starting November 2, 2020.</p> <p>Note that existing licensed users will not see any disruption in their service.</p>

We are republishing the content for MC190854 (Sept, 2019) as it was removed from Message center prematurely. The original message is provided below. We apologize for the inconvenience.

As previously announced via "<https://www.microsoft.com/microsoft-365/blog/2017/04/20/office-365-proplus-updates/>" blog and MC175274 (March, 2019), Office 2013 clients' connections to commercial Office 365 services will not be supported after October 13, 2020. After this date, ongoing investments in the Office 365 cloud services – including Exchange Online, SharePoint Online, and OneDrive for Business – will proceed based on post-Office 2013 requirements. We recommend that organizations with Office 2013 clients consider migrating to Office 365 ProPlus.

Support for Office 2016 and Office 2019 connections to Office 365 cloud services will continue until October 2023. Up to date information on current system requirements can be found under on the "<https://products.office.com/office-system-requirements>" Office system requirements page, with related timelines available in the Office system requirements "<https://query.prod.cms.rt.microsoft.com/cms/api/am/binary/RE2OqRI>" matrix.

<b>More Info URL</b>	<a href="https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard">https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard</a>
<b>MS Preperations</b>	<p>In order for you to better understand whether and how your organization is affected by this change, and where you need to migrate users, there are two System Center Configuration Manager "https://docs.microsoft.com/sccm/sum/deploy-use/office-365-dashboard" dashboards (updated as part of version 1902) that can help:</p> <p>the SCCM Product Lifecycle dashboard allows you to see which versions of Office are running on your desktops, to determine which will need updated Office apps to help ensure a seamless connection to Office 365 services</p> <p>the Office 365 ProPlus Upgrade Readiness report on the Office 365 client management dashboard helps to identify desktops in your organization that are ready to upgrade to Office 365 ProPlus with high confidence.</p> <p>Use these dashboards to identify users on Office 2010 and Office 2013 clients, deploy Office365 ProPlus or a supported version of Office perpetual to those desktops, and ensure that they will have supported access to Office 365 services after October 13, 2020.</p>
<b>MS How does it affect me</b>	<p>Microsoft will not take any active measures to block older Office clients, such as Office 2013 and Office 2010, from connecting to Office 365 services. However, legacy clients attempting to connect to a modern, always up- to- date cloud service may experience performance and reliability issues. Customers will face an increased security risk, and may find themselves out of compliance depending on specific regional or industry requirements. Microsoft Help may not be able to resolve issues that arise due to unsupported service connections.</p>

---

**TLS 1.0 and 1.1 retirement date in Office 365 to be October 15, 2020****MC218794**

We originally paused the retirement of TLS 1.0 and 1.1 in Office 365 (MC186218 June '20) due to these unprecedented times. As companies have pivoted their supply chains and countries have started to re-open, we have re-established a retirement date for TLS 1.0 and 1.1 in Office 365 to be October 15, 2020. As previously communicated (MC126199 in Dec 2017, MC128929 in Feb 2018 and MC186827 in July 2019), we are moving all of our online services to Transport Layer Security (TLS) 1.2+ to provide best-in-class encryption, and to ensure our service is more secure by default.

Note: If your organization has already taken steps to migrate from TLS 1.0 and 1.1 you can safely disregard this message.

Key Points:

Major: Retirement

Timing: October 15, 2020

Action: update or replace client devices as appropriate

**Links** MC128929, MC186218

**Securing SMTP Authenticated Submissions - Per Mailbox and By Default****59439**

check before:

**11/30/2020**

We're kicking off a multi-phased effort to better secure SMTP authenticated submissions. SMTP authenticated submission is commonly used by applications or devices (printers, scanners, etc.) to submit email into the Office 365 service. It only requires login credentials, and doesn't support modern authentication. So this leaves any account that's using SMTP authenticated submission more vulnerable to abuse and hacking than accounts that exclusively use the other protocols that do support modern authentication. Last year we introduced Remote PowerShell cmdlets to disable SMTP authenticated submission for your entire organization or for individual mailboxes, and recently we released a switch in the Exchange Admin Center (EAC) to toggle it off for individual mailboxes. In Q2 CY 2020 we'll start to disable it for existing Office 365 organizations who aren't using SMTP Authenticated Submission at all, and starting in Q4 CY 2020 we'll start to judiciously disable it for existing organizations in Office 365 who have it enabled for some mailboxes, working closely with them to transition away from this less secure protocol while ensuring the continuity of their critical business email workflows.

Status:

**In development**

Created:

12/07/2019

Product:

Exchange

Platform:

World tenant, Online

Scope:

Administration, Security

Ring:

General Availability

**Recommendations**

Check if you are using SMTP based submissions currently in your environment. Don't plan to directly connect SMTP clients like printers or multi-functional devices to Office 365 exchange service.

**Comments**

At the moment, it's not clear which technical solution Microsoft will offer to compensate for the deprecated SMTP submission function. The statement that they will work closely with the customers to avoid business interruptions based on SMTP is very vague and does not point to any technical direction.

We assume an on-premises or other cloud-based SMTP Relay will be needed.

**Description**

Microsoft disables the ability to send emails via SMTP authentication with password and username until Q4 2020. This affects multiple usage scenarios where SMTP is involved like multi-functional devices printers, or other systems which are relying on the capability to use SMTP.

## Message Recall in Exchange Online

59438

The Outlook for Windows Message Recall feature is extremely popular with users, yet it doesn't always work so well. Part of the problem is that the recall is client-based, and the recall can only happen if the recipient also uses Outlook. With millions of users with mailboxes in Office 365, we're now able to improve upon that feature by performing the recall directly in the cloud in Office 365 mailboxes, so it doesn't matter which email client the recipient uses, the recall takes place in their Office 365 mailbox, and when their client syncs their mail, the message is gone. While there are still some conditions where the recall still won't happen (like the message being read by the recipient), moving the recall to the cloud significantly improves the recall success rate. Additionally, we'll now also offer an aggregate message recall status report, to make it simpler to see for whom the recall succeeded and for whom it failed.

With the recent breakthroughs in deep learning techniques, you can now go beyond the common search term-based queries. The result is answers to your questions based on the document content. This opens a whole new way of finding knowledge. When you're looking at a water quality report, you can answer questions like "where does the city water originate from? How to reduce the amount of lead in water?"

### Using Microsoft Authentication Library (MSAL) with Yammer Groups API

MC221062

Starting December 1 2020,  
"https://developer.yammer.com/docs/group\_membershipsjsongroup\_idid"  
Yammer Groups API endpoints will only support the usage of Azure Active Directory (AAD) tokens. Yammer Groups API endpoints will no longer support the usage of "https://developer.yammer.com/docs/authentication-1" Yammer OAuth tokens. Microsoft recommends that customers and partners transition to using "https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview%C2%A0" Microsoft Authentication Library (MSAL) and AAD tokens with the Yammer API.

Key Points:

Major: Retirement

Timing: December 1, 2020

Action: review and assess impact

MS Preperations	<p>Use MSAL to authenticate with Yammer: Microsoft recommends that customers and partners transition their apps to authenticate using the Microsoft Authentication Library (MSAL) to acquire AAD tokens from the Microsoft Identity Platform to operate with the Yammer API. MSAL is available for .NET, JavaScript, Android, and iOS, which support many different application architectures and platforms. Learn about MSAL "<a href="https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview">https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview</a>" here.</p> <p>Set up AAD Client Application: Follow "<a href="https://docs.microsoft.com/en-us/azure/active-directory/develop/quickstart-register-app">https://docs.microsoft.com/en-us/azure/active-directory/develop/quickstart-register-app</a>" these instructions to set up a client application and assign Delegated Yammer API Permissions to access Yammer APIs.</p> <p>Resources</p> <p>U"<a href="https://techcommunity.microsoft.com/t5/yammer-blog/using-msal-with-yammer-groups-api/ba-p/1593907">https://techcommunity.microsoft.com/t5/yammer-blog/using-msal-with-yammer-groups-api/ba-p/1593907</a>" sing MSAL with Yammer Groups API</p>
MS How does it affect me	<p>Last year, we announced "<a href="https://docs.microsoft.com/en-us/yammer/configure-your-yammer-network/overview-native-mode">https://docs.microsoft.com/en-us/yammer/configure-your-yammer-network/overview-native-mode</a>" Native Mode, which gets your network ready to experience Microsoft 365 integrations. Native Mode requires that all your users are created in AAD, all Groups are Microsoft 365 Connected and all Yammer Files are stored in SharePoint Online. With the move to files in SharePoint, Yammer Files API started require using AAD tokens.</p> <p>As Yammer continues its journey to integrate into the Microsoft 365 ecosystem, there will be even more shared Yammer experiences across Microsoft 365, such as with Teams, Outlook and other applications. All of these require using AAD tokens. Yammer's OAuth token cannot be accepted to conduct these operations. Overtime all Yammer API endpoints will be changed to exclusively support AAD tokens.</p> <p>Starting December 1, 2020, Yammer Group API endpoints that are used to Update, Delete Groups, and manage Group Membership and Group Admins will only support AAD tokens. Using Yammer OAuth tokens will result in a bad request response from the server. Create and Read operations will be supported with Yammer OAuth tokens, however using AAD tokens for all API scenarios with Yammer is strongly recommended.</p>

Become familiar with the new migration process.

**MS How does it affect me**

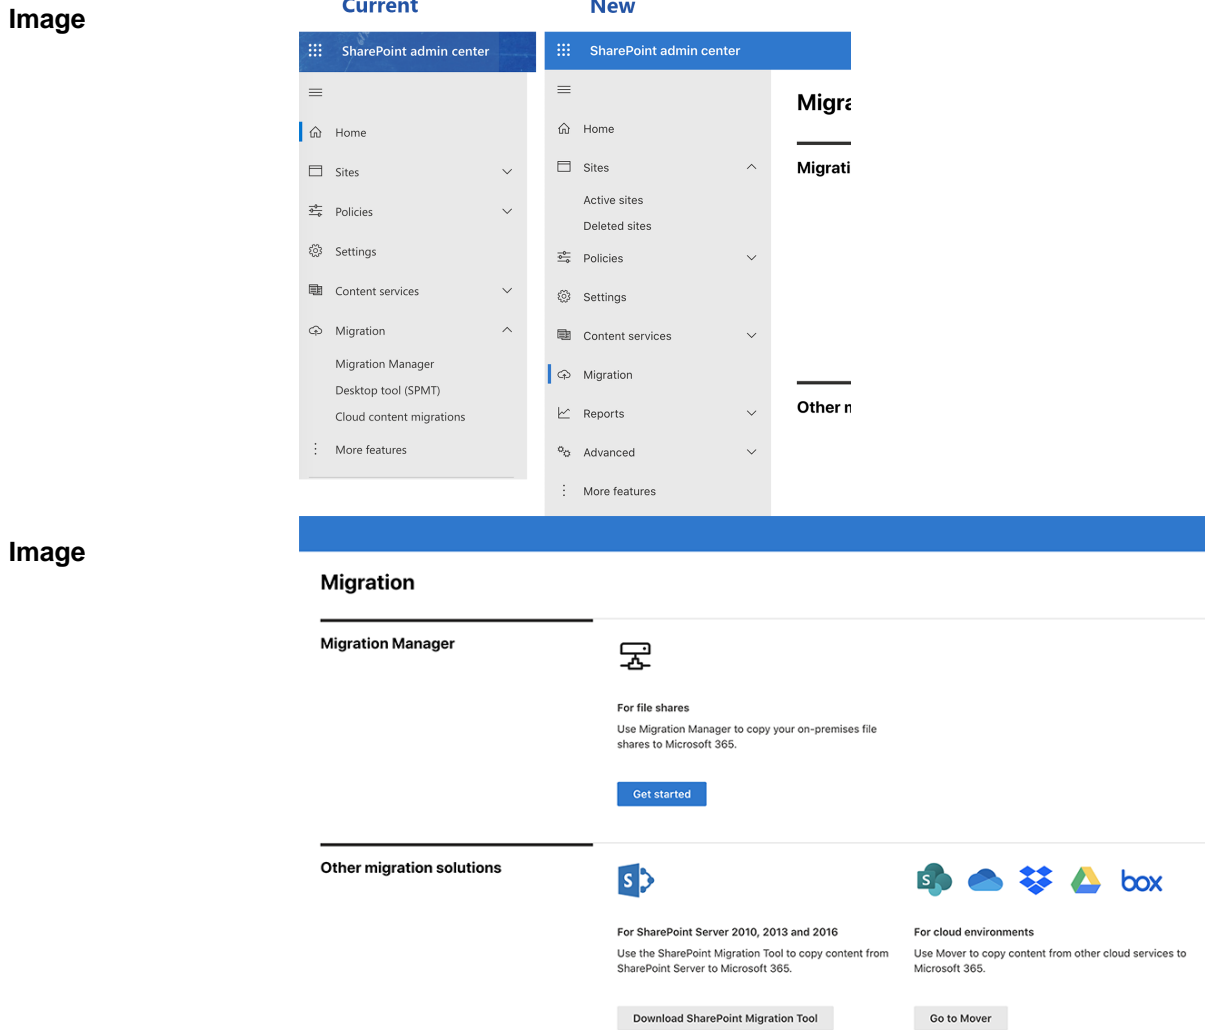

In the SharePoint Admin Center, click Migration from the left pane. Instead of expanding, this action will now take you to a migration selection page.

Select the right tool for your migration. Migrate your content from almost anywhere:

File shares, use Migration Manager

SharePoint Server, use SharePoint Migration Tool

Box, Dropbox, Google, tenant-to-tenant, and anything else, use Mover

**(Updated) Introducing the Organizer only Teams meeting lobby policy option**

**MC219629**

Updated September 18, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

In May (MC214522), we introduced a new user setting, Only me, that meeting organizers could select when configuring the "Who can bypass lobby?" setting for a Teams meeting. We are now making it possible for you to set Teams meeting defaults in your organization so that only meeting organizers can bypass the lobby.

This message is associated with Microsoft 365

"<https://www.microsoft.com/en-us/microsoft-365/roadmap?filters=searchterms=66463>" Roadmap ID 66463.

When this will happenWe will begin rolling this out the end of August and expect to complete the rollout by the end of September (previously early September).

Linked Item Details	<p>MC214522 Title : (Updated) New Teams meeting setting - require meeting participants to use the lobby</p> <p>66463 Title : Microsoft Teams - New meeting lobby configuration setting available for PowerShell and Teams Admin Center</p> <p>66463 Description: A new lobby type option is coming to PowerShell and Teams Admin Center that allows tenant administrators to assign a user-level policy to send everybody but the Teams meeting organizer into the meeting lobby. Once assigned, all meeting attendees--including those from within the same organization--will be sent to the meeting lobby to be admitted by the organizer.</p>
MS Preperations	<p>In addition to making this change via a new control in the Teams admin center, you can adjust the csTeamsMeetingPolicy setting for AutoAdmittedUsers using PowerShell. This new setting is "OrganizerOnly".</p> <p>Note: you have to explicitly assign this new value, "OrganizerOnly", to users. The introduction of this new setting does not change your current default setting.</p>
MS How does it affect me	<p>Currently, the tenant-level default setting for "Automatically admit people?" is Everyone in your organization. The other two options are Everyone in your organization and federated organizations or Everyone (no restriction). Although individuals can limit direct meeting access to the meeting organizer, you cannot currently make that a default setting for a given user or set of users. With this change, you will have a fourth option. You will be able to set "Automatically admit people" to Organizer only (most restrictive).</p> <p>Once you have assigned this value to any user, their default meeting settings will be that only the organizer can join directly; all attendees will need to enter via lobby.</p> <p>Once this is your tenant default, it applies to all new meetings created by the user.</p> <p>Should you make this the default setting, any prior meeting where the organizer did not modify the Meeting options.</p> <p>Meeting organizers can select Meeting options in the meeting invitation to change this setting for each meeting they schedule.</p>

Override Anyone link expiration policy for individual OneDrive

MC219777

Last year, we made it possible for tenant and SharePoint administrators to use PowerShell to override the organization's expiration policy on a per site collection basis. With this update, tenant and SharePoint administrators will be able to run the same PowerShell to override the anyone link expiration policy on an individual user's OneDrive.

When this will happenThis feature will begin rolling out in early August; we expect rollout to be complete by end of August.

Review the new capability and assess how it can help you manage your organization's security posture.</p> <p>Learn more:</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/solutions/best-practices-anonymous-sharing">https://docs.microsoft.com/microsoft-365/solutions/best-practices-anonymous-sharing</a>" Best practices for sharing files and folders with unauthenticated users</p> <p>"<a href="https://docs.microsoft.com/powershell/module/sharepoint-online/set-sposite">https://docs.microsoft.com/powershell/module/sharepoint-online/set-sposite</a>" Set-SPOSite</p>
MS How does it affect me	<p>Tenant and SharePoint administrators can now override the anyone link expiration policy on an individual OneDrive, choosing to either remove the expiration requirement entirely or set it to a more or less restrictive length.</p> <p>There is no impact to your users unless a tenant or SharePoint administrator executes this feature via PowerShell.</p>

## **(Updated) Pin based verification process for support callers**

**MC219951**

Updated August 25, 2020: Based on feedback we have updated the timeline and details of the post to provide more clarity. We appreciate your feedback.

We're adding a PIN-based verification step to our existing phone-based verification process, to better protect your organization. If you contact us from a number not registered with your Admin center profile, the Microsoft support representative will send a verification code to your registered email or phone in your Admin Center profile. Provide this code to the support representative to grant them access to your organization's account.

When this change will happen:

September 1, 2020 to November 30, 2020

**Docu to check** Working instructions for IT Support

**MS Preperations** To help ensure an expedited Support experience, users with appropriate permissions can update their profile contact information in Admin center->Users->Active users->Admin Name->Manage contact information.'<https://admin.microsoft.com/AdminPortal/Home#/users>' target='\_blank'> Direct link to Active users.

67103 Title : Microsoft Search: PowerBI results with Microsoft Search in SharePoint and Office.com

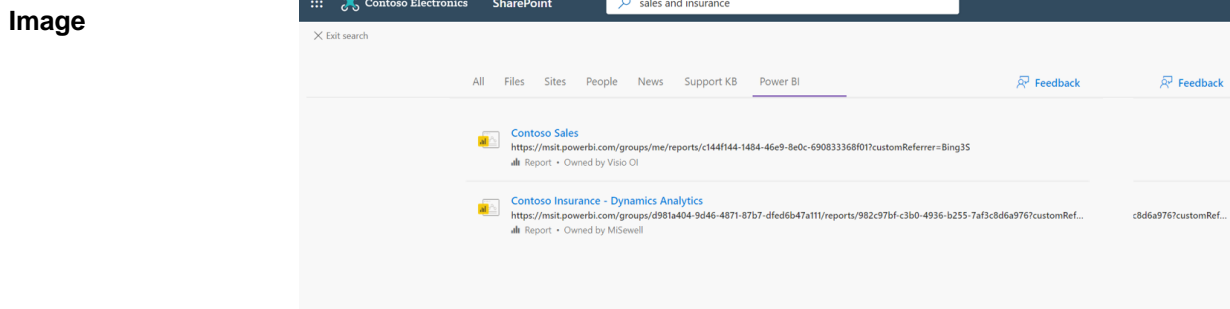

67103 Description: Microsoft Search in SharePoint and Office.com will now include results from PowerBI. PowerBI results with Microsoft Search in SharePoint and Office.com will allow you to search for Power BI artifacts (reports, dashboards, workspaces) based on keywords to get results list displayed in a new PowerBI vertical.

MS Preperations

You might consider updating your user training and documentation.  
"https://docs.microsoft.com/microsoftsearch/overview-microsoft-search" Learn more about Microsoft Search.

MS How does it affect me

Users will see a new PowerBI vertical available in SharePoint and Office.com to allow for keyword search of PowerBI reports, dashboards, and workspaces. PowerBI results are available now in Bing.com when signed in with a work account. Microsoft Search administrators can disable this feature in Microsoft Search settings through the Microsoft 365 admin center.

**(Updated) New Feature: Manage how long guests can access SharePoint Online and OneDrive documents**

---

**MC220791**

Updated September 11, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

You will soon be able to create a policy that automatically revokes access for external guests to "<https://docs.microsoft.com/sharepoint/sites/sites-and-site-collections-overview#overview-of-sharepoint-sites>" target="\_blank" style="">>SharePoint Online (SPO) sites and individual OneDrives after a defined period of time.

This message is associated with Microsoft 365

"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=43797>" Roadmap ID 43797.

When will this happen

We will begin rolling out to targeted release tenants by the end of September and standard release by mid-October.

We expect to complete the rollout the end of November.

## Docu to check

User Knowledge base, Service Description

## Linked Item Details

43797 Title : OneDrive: Expiring access for external users

43797 Description: Admins and end users can expire shares to external users.

## MS Preperations

If you plan to enable this feature, be sure to inform your SharePoint site administrators and users about the new process so that "<https://support.microsoft.com/office/manage-guest-expiration-for-a-site-25bee24f-42ad-4ee8-8402-4186eed74dea>" they are prepared to manage guest access as needed.

You can enable this policy, which applies to both SPO and OneDrive, in the SharePoint admin center.

Until you enable the policy, there will be no change in how long new guests may access shared content.

## MS How does it affect me

One of the strengths of SharePoint and OneDrive is that it facilitates sharing and collaborating among peers, not only within an organization but also with people outside the organization (guests). In order to "<https://docs.microsoft.com/sharepoint/turn-external-sharing-on-or-off>" better manage sharing, tenant admins will be able to create a policy to revoke guest access to SPO sites and individual OneDrives after a defined period of time. With this policy, you can limit guest user access; thus guests who are no longer active partners will not retain indefinite access to documents and files.

This policy is not retroactive; it does not apply to guests who already have access to sites, documents and files.

The policy applies to a user's access to a given SPO site or individual OneDrive. When the access period reaches your policy threshold, such as 10 days, then the guest loses access to all content in that site. Guest access expires on a site-by-site basis, determined by when the guest was granted access to each site, whether that is an SPO site or an individual OneDrive.

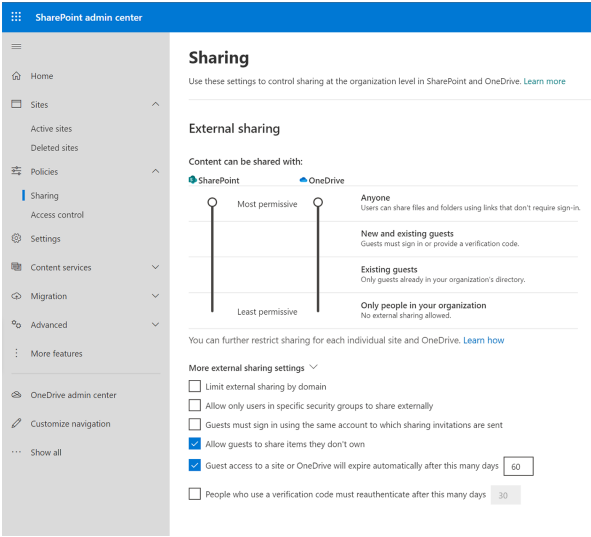

After a guest loses access to a site, any user with the ability to share content externally can re-invite the guest to each document or item as needed.

SharePoint site administrators can extend access at any time, up to the limit of the tenant policy.

For example, if the tenant policy is 10 days, and today is the 10th of the month, the SharePoint site admin could extend access for an external guest to the 20th of the month. There is no limit on the number of time a site admin can extend access.

SharePoint site administrators will receive e-mail notifications advising of upcoming guest user access expirations.

Image

OneDrive Sync: Improved warning for locked Office files

MC220725

Users will see a more descriptive alert when they are attempting to work with some locked Office files.

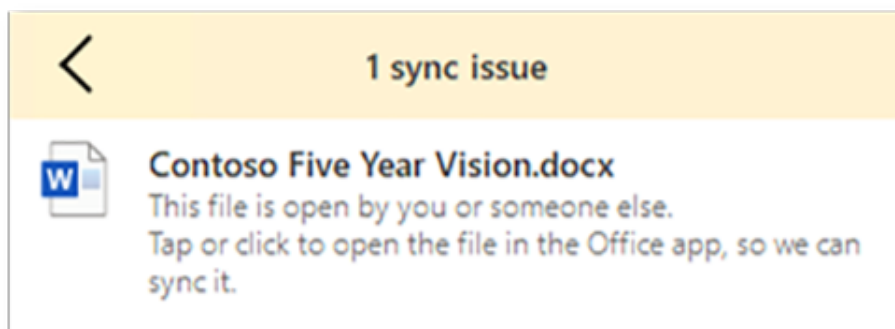

This message is associated with Microsoft 365 "https://www.microsoft.com/microsoft-365/roadmap?filters=&searchterms=66099" Roadmap ID 66099.

When this will happenThe feature will be enabled gradually in early September as part of OneDrive sync app build 20.143+. We expect the rollout to be complete in late September.

## SharePoint: SharePoint Online search query volume limits when using app-only authentication

64963

When using the SharePoint Online search APIs with app-only authentication where the app implements the Sites.Real.All permissions level or greater, the app is registered with full permissions and allowed to query across all SharePoint Online content to include user's private OneDrive for Business content. When this change is implemented, queries using the Site.Read.All permissions level or greater will be throttled at 25 QPS. The search query will return with a 429 response and you can simply retry the query. When waiting for 429 recovery, you should ensure to pause all search query requests you may be making to the service using similar app-only permission. Making additional calls while receiving throttle responses will extend the time it takes for your app to become unthrottled. As we scale our system, we realize the importance of hardening the system to run it efficiently and also to protect the system and hence this change. This change is expected to rollout beginning August 2020 into the Fall of 2020.

## Microsoft Edge v. 86: New group policy to replace existing diagnostic data policies MetricsReportingEnabled and SendSiteInformation in downlevel Windows and MacOS

69132

Control Microsoft Edge diagnostic data that gets sent to Microsoft on Windows 7, 8, 8.1 and macOS. We are deprecating MetricsReportingEnabled and SendSiteInformation policies. They are being replaced by Allow Telemetry on Windows 10 and then the new DiagnosticData policy on all other platforms. The current plan is for this to mark MetricsReportingEnabled and SendSiteInformation as deprecated in Microsoft Edge 86 and become obsolete in Microsoft Edge 89. The new DiagnosticData policy will release in Microsoft Edge 86.

## Office 365 ATP, Secure by Default: Honoring EOP/ATP detonation verdicts

60827

We see lots of cases where configuration of our protection stack has enabled malicious content to be inadvertently delivered to end users. We're working on a few features that will help address this problem. Our first phase includes Honoring detonation verdicts. All too frequently, URLs and files that have been flagged as malicious are allowed through to the inbox due to transport rules and domain allows. We're updating our filters to ensure that malicious files and URLs are not delivered regardless of configuration, unless manually overridden.

**Compliance** Make an assessment if confident or sensitive data might be exposed via Microsoft Lists to external parties.

**Recommendations** You should check in which way the new Microsoft lists feature product fits into your landscape especially in terms of task management another lists. Also, the Microsoft landscape in terms of Microsoft to do and planner should be evaluated.

**Config Options** It is expected that the new Microsoft Lists feature can be disabled in the sub-SKU licensing part or via another switch if not needed.

**Opportunities** With Microsoft Lists you can let you use is easily create lists with some logic without a IT or developer involvement.

**Comments** Microsoft Lists home (web) and mobile app – Create new lists, share and access recent and favorite lists in one location  
Microsoft Teams + Microsoft Lists – Create a new list or embed an existing list directly in a Teams channel - combining lists with side-by-side conversation  
Ready-made templates help you get started quickly – Jumpstart common scenarios with preconfigured structure, forms, views, and formatting  
Customizable views, smart rules, and sharing keep everyone in sync

**Description** Track issues, assets, routines, contacts, inventory and more using customizable views and smart rules and alerts to keep everyone in sync.

## (Updated) Introducing live transcription in Microsoft Teams meetings

MC220987

Updated September 15, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

Live transcripts in Microsoft Teams meetings will provide another way to both follow and review meeting conversations. Note: Live transcription currently supports only spoken English (English-US).

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=&searchterms=65967)

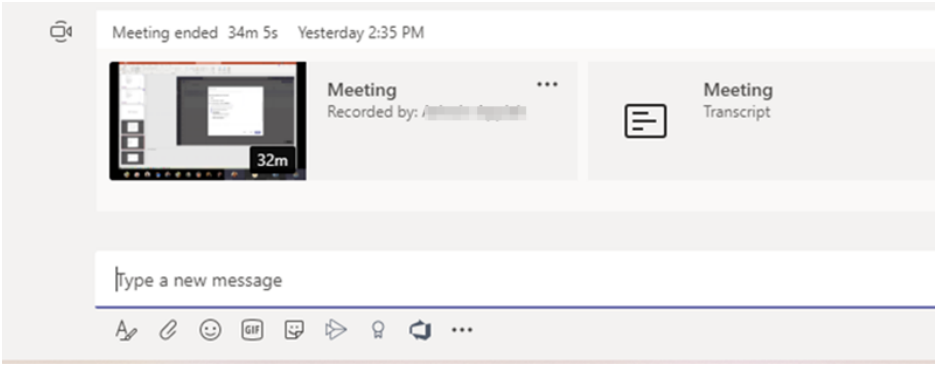

365/roadmap?filters=&searchterms=65967" Roadmap ID 65967.

When this will happen We will begin rolling this out in mid-October (previously late September) and expect the rollout to be complete at the end of October (previously early October).

Linked Item Details	<p>65967 Title : Microsoft Teams - Live Transcription with speaker attribution</p> <p>65967 Description: Live transcripts provide another way to follow along with what has been said and who said it. After a meeting, the transcript file is automatically saved in the chat tab for that meeting.</p>
MS Preperations	<p>You will need to "<a href="https://docs.microsoft.com/microsoftteams/meeting-policies-in-teams#allow-transcription">https://docs.microsoft.com/microsoftteams/meeting-policies-in-teams#allow-transcription</a>" enable the Allow transcription policy in order to have live transcripts in tenant meetings. Today this policy is only used for post-meeting transcription, but we will use this policy for live transcription as well.</p> <p>Note: When using the web client, attendees cannot see the live transcript during the meeting but can view and download the transcript post-meeting.</p>
MS How does it affect me	<p>If you have enabled recording ("<a href="https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#set-up-teams-cloud-meeting-recording-for-users-in-your-organization">https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#set-up-teams-cloud-meeting-recording-for-users-in-your-organization</a>" Allow cloud recording) and transcription ("<a href="https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#prerequisites-for-teams-cloud-meeting-recording">https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#prerequisites-for-teams-cloud-meeting-recording</a>" Allow transcription) policies for your tenant, your users will now see two options in the meeting control bar:</p> <p>Recording and Transcription</p> <p>Transcription</p> <p>Note that recording is combined with transcription. If a user begins recording, the meeting will also feature a live transcription. The meeting transcript is automatically saved whether or not the meeting has been recorded if a user initiated the transcription.</p> <p>The transcript file will be accessible for download post-meeting via chat as well as from the Transcript tab.</p> <p>The meeting organizer will be able to delete the saved transcript when using the Teams desktop app.</p>

Image

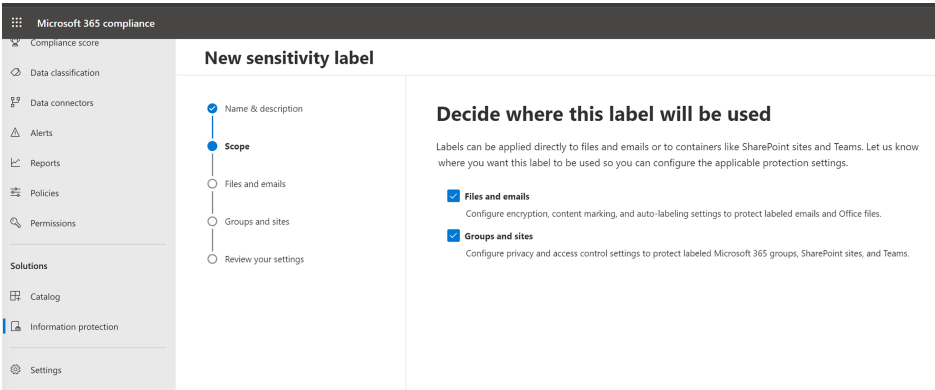

In MC216757 (June 2020), we announced that sensitivity labels would soon be applicable to Microsoft Teams sites, Microsoft 365 groups (formerly Office 365 groups), and SharePoint sites. Based on your feedback, we have changed the user interface to separate the container label from the file/email label.

When this will happen This update will roll out in mid-September and is expected to be complete by mid-October.

Platform:	Mac, mobile, World tenant
Scope:	Administration, Security, User
Ring:	General Availability

Links	65952
Docu to check	Service Description, Working instructions for IT Support, User Knowledge base
Linked Item Details	<p>65952 Title : Microsoft Teams - Overflow meetings</p> <p>65952 Description: When attendees exceed the meeting attendee limit, the meeting will scale to accommodate up to 20,000 in an experience where they can watch.</p>
MS Preperations	<p>If you have purchased the "<a href="https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications">https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications</a>" Advanced Communications add-on, this feature will be ON by default for users who have been assigned a license for the Advanced Communications plan. You may use PowerShell to disable this feature for your entire tenant while you prepare to assign the licenses.</p> <p>Note: The view-only attendance feature is provided using the Teams Live Events streaming services.</p> <p>Learn more about the "<a href="https://www.microsoft.com/microsoft-365/blog/2020/08/03/take-communnext-level-microsoft-teams/">https://www.microsoft.com/microsoft-365/blog/2020/08/03/take-communnext-level-microsoft-teams/</a>" Advanced Communication add-on plan.</p>
MS How does it affect me	<p>Currently, Teams meetings are limited to 300 users. If someone tries to join a meeting after it reaches capacity, they are unable to do so.</p> <p>If you choose to purchase the "<a href="https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications">https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications</a>" Advanced Communications add-on, users who are assigned an Advanced Communications license will be able to host a meeting with up to 20,000 people as view-only attendees after a meeting has reached capacity.</p> <p>The inclusion of view-only attendees will not impact the normal interaction available between regular attendees who joined before the meeting reached capacity.</p> <p>Once the maximum Advanced Communications limit is reached, no additional view-only attendees will be able to join.</p> <p>View-only attendees can use Teams in the browser or a Teams desktop app (Windows or Mac). We expect to support Teams mobile apps in mid-October; we will communicate that support via a new Message center post.</p> <p>View-only attendees do not need the Advanced Communication plan to join the meeting in a view-only capacity. However, they do need permission to bypass the Lobby based on set Lobby Policies or Options.</p> <p>View-only attendees will follow all lobby and security policy mechanisms.</p> <p>View-only attendees will do so with limited access to capabilities. For example, view-only attendees will be able to listen to all audio and view a screen or window shared during the meeting. However, they will be unable to share audio or video, and they will be unable to see chat or other applications that are shared during the meeting.</p> <p>Meeting organizers will not be able to see view-only participants in attendee counts or reports; this feature does not support the e-discovery of data. Organizers cannot remove view-only attendees from a meeting.</p>

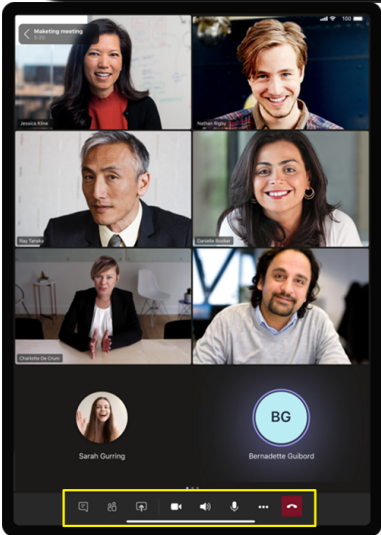

Introducing floating call controls in Teams meetings	MC221371

09/11/2020

Starting September 4th, 2020, administrators will be able to run diagnostics on individual users from the Power Platform admin center to detect potential causes to access issues and suggest potential mitigations. The feature is in Public Preview.

What is changing?

The new experience is in the Power Platform admin center and is available exclusively for environments with a Common Data Service database. From the “users” page in the environment’s settings, the administrator can select a user and run diagnostics. A side panel will open and display detailed information about the user (ex. access mode, status, etc.) and the results of the diagnostics. The following validations are carried out and corresponding results are reported along with potential mitigations for any failed validation:

1. Verify if the user is enabled in Azure Active Directory.
2. Verify if the user has an active license or if the environment has available ‘per app’ plans.
3. Verify if the user is part of the environment’s security group (if applied as an optional security provision).
4. Verify if the user is a member of any Common Data Service security role.

Tests #1, #2, and #3 all need to pass for a user to be enabled in the environment (user status = ‘enabled’). Otherwise, the user will be disabled and can no longer access the environment (user status = ‘disabled’). Test #4 dictates whether the user can access the data in the environment.

The action of running diagnostics will force the user information to synchronize and provide up-to-date status on their properties.

Why should I use this new capability?

Leverage this new capability to effectively self-diagnose and self-resolve user access issues for a given environment. If the diagnostic run does not eliminate the root cause(s), then providing the details of the diagnostics in the support ticket will help Microsoft support engineers to resolve your issue.

What action do I need to take?

No further action is needed. This capability has been added to the Power Platform admin center and is available to all administrators who have access to the environment.

Thank you for being a valued Microsoft customer.

Thank you,

Microsoft

Linked Item Details	66744 Title : Microsoft Teams: Turn off text previews for chat notifications 66744 Description: Users can get more privacy by changing their settings to turn off message previews in chat notifications.
MS Preperations	When this feature rolls out, your user will see the new toggle in their Teams notification settings. There is no change in message preview behavior until a user disables previews.
MS How does it affect me	One of the key privacy requests we have heard from customers is for individuals to be able to disable chat notification previews in Teams. With this release, your users can enable or disable message preview notifications in Teams. The setting is respected across all notifications all clients.

Intune Plan for Change: Managing Android devices running 10 and above where Google Mobile Services are unavailable
MC222160

	check before:	09/22/2020
	Status:	
	Created:	09/15/2020
	Product:	Intune
	Platform:	Android, World tenant
	Scope:	Administration, MDM, Security
	Ring:	
<p>Previously communicated in MC215358, Android device administrator management was released in Android 2.2 to manage Android devices. Then beginning with Android 5, the more modern management framework of Android Enterprise was released for devices that can reliably connect to Google Mobile Services (GMS). In areas where Android Enterprise is available, Google is encouraging movement off device administrator (DA) management by decreasing its management support in new Android releases. However, where Android Enterprise or GMS are unavailable, you'll want to use device administrator and familiarize yourself with these changes.</p>		

<b>Recommendations</b>	<p>Most organizations still use Android device administration, even with 3rd part MDM or MAM systems. The change by Google is affecting all solutions.</p> <p>It's highly recommended to set up a mitigation project which will start within the next few weeks,</p>
<b>Links</b>	MC215358,MC221222,MC221226,MC221228
<b>Opportunities</b>	The change to the Android device management by Google will have an impact on the overall security paradigm. This is an excellent opportunity to move to a more identity and object-level security concept.
<b>Description</b>	Google changes the way Android devices are managed. This will be reflected in Intune.
<b>Docu to check</b>	Service Description, Working instructions for IT Support, Automation / Scripts
<b>Linked Item Details</b>	<p>MC215358 Title : Intune plan for change: Decreasing support for Android device administrator</p> <p>MC215358 Url : <a href="https://aka.ms/android_da_docs">https://aka.ms/android_da_docs</a></p> <p>MC221228 Title : Intune Plan for Change: Android 11 trusted root certificate and SCEP certificate changes on Android DA devices</p> <p>MC221228 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a></p> <p>MC221226 Title : Intune Plan for Change: Admin changes to password settings in Android device administrator profiles</p> <p>MC221226 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a></p> <p>MC221222 Title : Intune plan for change: Changes coming to Wi-Fi profiles on Android device administrator</p> <p>MC221222 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a></p>
<b>More Info URL</b>	<a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793</a>
<b>MS Preperations</b>	<p>Determine if your organization has Android devices that will be impacted and familiarize yourself with the changes and update end user documentation if necessary. Note, the Password Complexity setting will be included in Intune's September release, giving you time to configure it for impacted devices.</p> <p>Additional information</p> <p>"<a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793</a>"</p> <p><a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793</a></p> <p>"<a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a>" <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a></p> <p>"<a href="https://aka.ms/password-complexity">https://aka.ms/password-complexity</a>" <a href="https://aka.ms/password-complexity">https://aka.ms/password-complexity</a></p>
<b>MS How does it affect me</b>	<p>This will affect you if you are managing Android devices with Microsoft Endpoint Manager - Intune in locations such as China, or scenarios where GMS are unavailable. If Android Enterprise and GMS are available, you can use them instead.</p> <p>There are several changes to device administrator if using Android 10 and later. These changes will affect newly enrolled devices, newly assigned settings, and updated settings:</p> <p>The end user experience for wi-fi profiles, for more details see MC221222.</p> <p>On devices running Android 11 and later that are not manufactured by Samsung, you won't be able to deploy trusted root certificates. For more information about the extent of the impact, see MC221228.</p> <p>There will be admin changes to password settings and a new setting "<a href="https://aka.ms/password-complexity">https://aka.ms/password-complexity</a>" Password Complexity, for more details see MC221226.</p>

## (Update) Teams meetings, end of meeting notification

MC222346

Updated September 24, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

We will soon be alerting Teams meeting participants when there are five minutes remaining in a scheduled meeting.

This message is associated with Microsoft 365

"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67122" Roadmap ID 67122.

When this will happen

We will begin the rollout in late September (previously mid-September) and expect it to be complete in early October (previously late September).

**Links** 67122

Linked Item Details

67110 Title : Microsoft Teams: Templates for creation of a new Team

67110 Description: With Templates in Teams, users can choose from a variety of customizable templates when creating a new team, helping them get started quickly. IT professionals can also create new custom templates for their organization, allowing them to standardize team structures, surface relevant apps, and scale best practices.

MS Preperations

You might consider updating your user documentation and training.

Learn more: "<https://docs.microsoft.com/MicrosoftTeams/get-started-with-teams-templates-in-the-admin-console#what-are-base-template-types>" Get started with Teams templates in the Teams admin console

"<https://docs.microsoft.com/MicrosoftTeams/create-a-team-template>" Create a custom team template in Microsoft Teams

"<https://docs.microsoft.com/MicrosoftTeams/create-template-from-existing-team>" Create a template from an existing team in Microsoft Teams

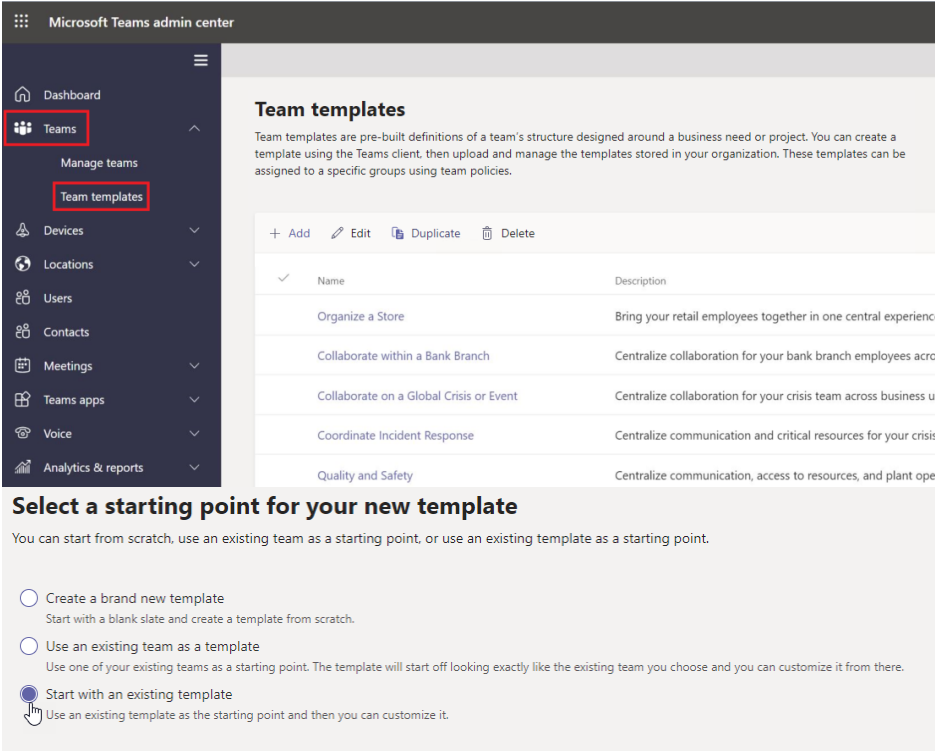

"<https://docs.microsoft.com/MicrosoftTeams/create-template-from-existing-template>" Create a new template from an existing team template in Microsoft Teams

MS How does it affect me

Your users can choose "<https://docs.microsoft.com/MicrosoftTeams/get-started-with-teams-templates-in-the-admin-console#what-are-base-template-types>" from 13 pre-built or base templates when they need to create a new team. We built these base templates for different tasks, such as managing a project or an event or coordinating an incident response. Base templates have a predefined team structure with a set of channels, tabs, and apps; they can be duplicated but not edited.

"<https://docs.microsoft.com/MicrosoftTeams/create-a-team-template>" Your Teams admins can develop custom teams templates to enable users to create the right collaboration space quickly. Each custom template will have its own defined team structure, channels, tabs, and apps. Teams admins can start from scratch, start with an existing template, or duplicate an existing team as a template.

Timing: Early October (October 5, 2020) – You can enable the Teams Meeting policy to have meeting recordings saved to OneDrive and SharePoint instead of Microsoft Stream (Classic)

End of October (October 31, 2020) – Meeting recordings in OneDrive and SharePoint will have support for English captions via the Teams transcription feature.

Early to mid-November (Rolling out between November 1 -15 , 2020) – All new Teams meeting recordings will be saved to OneDrive and SharePoint unless you delay this change by modifying your organization's Teams Meeting policies and explicitly setting them to "Stream"

Q1 2021 – No new meeting recordings can be saved to Microsoft Stream (Classic); all customers will automatically have meeting recordings saved to OneDrive and SharePoint even if they've changed their Teams meeting policies to Stream"

<b>Docu to check</b>	Service Description, User Knowledge base
<b>Linked Item Details</b>	<p>67138 Title : Microsoft Teams: meeting recordings saved to OneDrive and SharePoint</p> <p>67138 Description: Ability to save Microsoft Teams meeting recordings to OneDrive and SharePoint for improved sharing capabilities, basic governance, automatic retention labels, go local, bring your own keys and, more that comes from recording video files and storing them in SharePoint and OneDrive.</p>
<b>More Info URL</b>	<a href="https://docs.microsoft.com/en-us/MicrosoftTeams/tmr-meeting-recording-change">https://docs.microsoft.com/en-us/MicrosoftTeams/tmr-meeting-recording-change</a>
<b>MS Preperations</b>	<p>Customers are able to opt in, opt out, or take no action with regard to these changes. Changes in this communication will apply to customers who either opt in or take no action.</p> <p>Tenant admins can opt in or opt out of OneDrive and SharePoint as the Teams meeting recording storage location via a Teams policy in PowerShell. Additionally, customers who wish to have captions for their meetings will need to enable transcript recording in Teams.</p> <p>In Q1 CY2021, saving Teams meeting recordings to Microsoft Stream (Classic) will no longer be allowed. Precise dates will be communicated in a subsequent post.</p> <p>Learn more: "<a href="https://docs.microsoft.com/MicrosoftTeams/tmr-meeting-recording-change">https://docs.microsoft.com/MicrosoftTeams/tmr-meeting-recording-change</a>" Use OneDrive for Business and SharePoint or Stream for meeting recordings</p>
<b>MS How does it affect me</b>	<p>This change impacts your organization in several ways:</p> <p><b>New features</b>The move to ODSP immediately unlocks long-awaited features including external and guest sharing, retention policy application (<a href="https://docs.microsoft.com/microsoft-365/compliance/apply-retention-labels-automatically">https://docs.microsoft.com/microsoft-365/compliance/apply-retention-labels-automatically</a>), GoLocal support, and BYOK support for customers, with improved transcription quality, speaker attribution, transcript content search, and other features to follow in CY2021.</p> <p><b>Meeting storage</b>Non-Channel meetings will be stored in the OneDrive of the person who clicked the record button in a special folder labeled "Recordings" – that sits at the top of the recorder's OneDrive. Channel meetings will be stored in a folder labeled "Recordings" under a folder named after the channel under the Team's document library.</p> <p><b>Permissions</b>All meeting invitees - except for external users – in non-channel meetings will automatically get a shared link to access the meeting recording. External users will need to be explicitly added to the shared list by the meeting organizer or the person that clicked the record button. For Channel meetings, permissions will be inherited from the owners and members list in the channel.</p> <p><b>Feature gaps</b>The following gaps exist today:</p> <ul style="list-style-type: none"> <li>Ability to block download of the video by meeting participants</li> <li>Ability to view and edit the transcript in the player, but closed captions will be present</li> <li>Non-English language transcripts/captions</li> <li>Variable playback speed in video player</li> <li>Transcript timeframe search (e.g., to find a specific point in time when something was discussed)</li> </ul>

## Microsoft Teams - Dynamic view

65943

Dynamic view automatically optimizes shared content and video participants in Teams meetings. New controls let you personalize the view to suit your preferences and needs, such as the ability to show shared content and specific participants side-by-side.	check before:	<b>09/30/2020</b>

## Optimize your end user experience using reauthentication best practices

MC222813

We have recently updated the "<https://docs.microsoft.com/azure/active-directory/authentication/howto-mfa-mfasettings#remember-multi-factor-authentication>" target="\_blank" style="font-family: inherit; font-size: inherit; color: inherit;">remember Multi-Factor Authentication (MFA) on a trusted device feature to extend authentication for up to 365 days. You are receiving this email because you are currently using this setting within your tenant. However, you also have Azure Active Directory (Azure AD) Premium licenses, which allow you to use the "<https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime#user-sign-in-frequency>" Conditional Access – Sign-in Frequency policy that provides more flexibility for reauthentication settings.

When this will happen The extended duration for remember MFA on a trusted device and the Conditional Access sign-in frequency policy are available now.

### Docu to check

Automation / Scripts, Working instructions for IT Support

### MS Preperations

To get started, review our "<https://docs.microsoft.com/azure/active-directory/authentication/concepts-azure-multi-factor-authentication-prompts-session-lifetime>" latest guidance on optimizing the reauthentication experience.

Then review your tenant configuration. If you have enabled more than one setting in your tenant, we recommend using only the Conditional Access policies of

"<https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime#user-sign-in-frequency>" user sign-in frequency or

"<https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime#persistence-of-browsing-sessions>" persistent browser sessions.

Review "<https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime>" Configure authentication session management with Conditional Access

Review "<https://docs.microsoft.com/azure/active-directory/authentication/howto-mfa-mfasettings#remember-multi-factor-authentication>" Remember Multi-Factor Authentication on a trusted device setting

### MS How does it affect me

For the optimal user experience, we recommend using "<https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime#user-sign-in-frequency>" Conditional Access sign-in frequency to extend session lifetimes on trusted devices, locations, or low-risk sessions as an alternative to the remember MFA on a trusted device setting. If using remember MFA on a trusted device, be sure to extend the duration to 90 or more days.

## Microsoft Whiteboard introduces per user licensing

MC222821

Microsoft Whiteboard, which is automatically enabled for most Microsoft 365 tenants, will soon read licenses at a user level. There's no change to how Microsoft Whiteboard is managed at the tenant level. If you do not use Whiteboard in your tenant, you can disregard this message.

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66761)

365/roadmap?filters=searchterms=66761" Roadmap ID 66761.

When this will happen This feature will be enabled mid-October.

<b>Docu to check</b>	Service Description, Working instructions for IT Support		
<b>MS Preperations</b>	Based on customer feedback, we are removing the Set Microsoft Defender SmartScreen Windows Store app web content checking to warn security recommendation for Microsoft Defender ATP. " <a href="https://docs.microsoft.com/microsoft-365/security/mtp/microsoft-secure-score">https://docs.microsoft.com/microsoft-365/security/mtp/microsoft-secure-score</a> " Microsoft Secure Score is a measurement of an organization's security posture; it can be accessed at " <a href="https://security.microsoft.com/securescore">https://security.microsoft.com/securescore</a> " <a href="https://security.microsoft.com/securescore">https://security.microsoft.com/securescore</a> .		
<b>MS How does it affect me</b>	We will begin rolling this out in mid-October; the rollout will be complete end of October.		

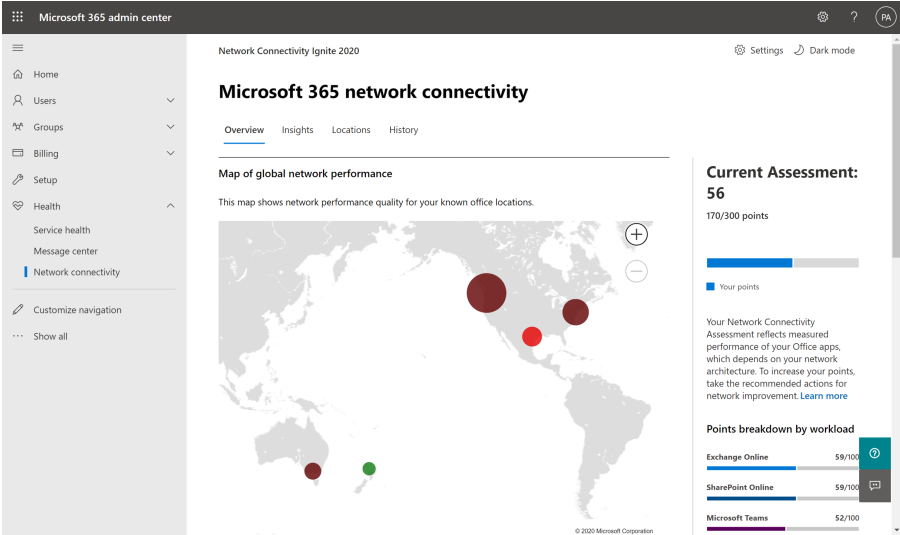

## Microsoft 365 admin center Network connectivity preview

MC222869

		check before:	10/02/2020
The Network connectivity category within the Microsoft 365 admin center allows you to see a network assessment that evaluates the impact of your network design on Microsoft 365 user experience in a 0 – 100 scale. This is calculated based on network attributes which have been proven through support cases to affect user experience the most. The network assessment is best evaluated at a specific office location, but an organization wide network assessment is also provided. In addition, specific network insights are provided which identify network design improvements that could be made to align with the published network connectivity principles and improve network performance.		Status:	
		Created:	09/26/2020
		Product:	Microsoft 365 admin center
		Platform:	World tenant, Online
		Scope:	Administration
		Ring:	
When this will happen			
The feature is available in preview now and can be accessed by signing up in the Microsoft 365 admin center. It is planned to be generally available by April 2021.			

<b>Pictures in MC</b>	<a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4GoSe?ver=ad9b">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4GoSe?ver=ad9b</a>

<b>MS Preperations</b>	Learn more: " <a href="https://docs.microsoft.com/MicrosoftTeams/app-permissions-admin-center">https://docs.microsoft.com/MicrosoftTeams/app-permissions-admin-center</a> " View app permissions and grant admin consent in the Microsoft Teams admin center
<b>MS How does it affect me</b>	<p>We are announcing three changes in the Teams admin center:</p> <p>Global admins will be able to review and grant consent to Graph API permissions registered in Azure Active Directory on behalf of the entire tenant for the permissions an app is requesting, such as reading information stored in a team or sending an email on behalf of users. Admins will be able to unblock third-party apps they have already reviewed and approved to use in their organization.</p> <p>In July (MC218561) we released the "<a href="https://docs.microsoft.com/en-us/microsoftteams/platform/graph-api/rsc/resource-specific-consent">https://docs.microsoft.com/en-us/microsoftteams/platform/graph-api/rsc/resource-specific-consent</a>" resource-specific consent (RSC) permissions model which granted team owners the ability to consent for an application to access and/or modify a team's data. With this change, IT admins will be able to review the permissions for RSC apps deployed by team owners.</p> <p>IT admins can install apps with team scope to any team in their organization.</p>

## Microsoft Search: Use, view, and manage your personal query history

67133

Microsoft Search is the intelligent search experience in Microsoft 365. We're improving Microsoft Search, adding a new option to view and manage your personal query history. With personal query history, you'll see your recent queries as you begin typing in the search box to help you get back to insights and information you recently used or accessed so you'll no longer have to bookmark your queries or memorize the right query to get you back to where you were. Your personal query history can be managed through your Office 365 My Account settings. New My Account privacy controls allow you to delete your query history or download your query history for future reference.

## Microsoft Search: Personal query history 68782

As you start typing in the search box, you will see suggested searches and results based on your previous activity in Microsoft 365 and based on content that's trending in your organization. Personal query history will show the queries you have previously used. These personal query suggestions are served from your personal search history. Personal query suggestions are a quick way to get back to results you've found before. You just need to remember the beginning of a query, after you've typed just a few characters the query is suggested for you.

## Microsoft Search: Smart Find (Find-in-Document) in Word, Excel, and PowerPoint

68801

Search your document like you search the web. We're utilizing well-established web search technologies, such as query and document understanding, and adding deep learning based natural language models. This allows us to handle a much broader set of search queries beyond "exact match." Typos: When there is a misspelling in the query, search can now show related matches. For example, technincian vs. technician. Forms of words: When there are different forms of the word in document and query. For example: tech, technology, technologies"; or USA, U.S.A, United States, United States of America; or newborn, new born, new-born, etc. Synonyms: For example: citation, quotation, quote, reference might be all the candidates for a term that you are searching for inside the document. A multi-word query: A single word query might lead to too many search results. A modern semantic search can often yield better results. For example: as a query of Oil Price, the content having Price of Oil, Prices of the Oil, Cost of Oil can offer related matches from within the document content.

What's next to do minor Items

Beginning the week of August 31st, 2020, Outlook for Android will be extending its support of mobile device mailbox policy settings to include the AllowBluetooth setting which will be used to disable wearable sync for those customers that do not have Microsoft Intune.

Outlook for Android supports Android and Tizen wearable technology. When the Outlook app is installed on the wearable, the user can receive message notifications and event reminders, interact with messages, and view daily calendars. For data to synchronize to the Outlook app installed on Android or Tizen wearable devices, the wearable must be connected to the Android device via Bluetooth.

By default, Outlook for Android supports a model where wearable sync is enabled.

For more information on what Outlook scenarios are specifically supported on Tizen wearables, see

["https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen"](https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen)

<https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen>.

Microsoft offers an in-market solution where Intune customers can leverage Intune App Protection Policies to disable wearable technology.

This solution prevents any data from being synchronized to the wearable device from the work or school account when protected by an Intune App Protection Policy. For more information, see

["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios) Deploying Outlook for iOS and Android app configuration settings.

Outlook for Android does support Exchange Online's mobile device mailbox policy framework. Outlook for Android consumes the

["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/exchange-activesync/mobile-device-mailbox-policies"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/exchange-activesync/mobile-device-mailbox-policies) mobile device mailbox policy and acts based on what policy settings are configured. The mobile device mailbox policy is evaluated when Outlook for Android connects to Exchange Online. Today, Outlook for Android only supports the PIN and encryption client policy settings (see ["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies) Managing Outlook for iOS and Android for more information).

With the change at the end of August, when Outlook consumes the Exchange mobile device mailbox policy, Outlook will act on the AllowBluetooth setting's value when an Intune App Protection Policy is not applied to the work or school account:

When AllowBluetooth is enabled (default behavior) or configured for HandsfreeOnly, wearable synchronization between Outlook on the Android device and Outlook on the wearable is allowed for the work or school account.

When AllowBluetooth is disabled, Outlook for Android will disable synchronization between Outlook on the Android device and Outlook on the wearable for the specified work or school account (and delete any data previously synced for the account). Disabling the synchronization is controlled entirely within Outlook itself; Bluetooth is not disabled on the device or wearable nor is any other wearable app affected.

Status:

Linked Item Details	27287 Title : Outlook for Mac: New user experience across email, search and calendar 27287 Description: Delivers the option to preview updates coming to Outlook for Mac that enhance performance and user experiences across email, search and calendar. Includes capabilities that are based on intelligent technology such as suggested replies and Meeting Insights. Architected using the Microsoft sync technology.
More Info URL	<a href="https://techcommunity.microsoft.com/t5/outlook-blog/introducing-the-new-outlook-for-mac/ba-p/936884">https://techcommunity.microsoft.com/t5/outlook-blog/introducing-the-new-outlook-for-mac/ba-p/936884</a>
MS Preperations	There's nothing you need to do to prepare for this change, but you may consider updating your user handbooks and notifying your helpdesk. If you would like to change your organization's enrollment in Insider Slow you can do so following the instructions " <a href="https://insider.office.com/en-us/join/mac">https://insider.office.com/en-us/join/mac</a> " here.
MS How does it affect me	All Mac users that are enrolled in the Insider Slow ring will see a "New Outlook" toggle on the upper right hand side of their Outlook window, which will be off by default. They can select the toggle in order to turn on the new experience and simply select it again when they would like to return to the current version.

(Updated) Speaker attribution in Live Captions		MC219651
<p>Updated September 15, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below</p> <p>Teams already provides live captions as a way to follow along with what is being said in a meeting. We will soon add speaker attribution to captions so that everyone knows who is speaking.</p> <p>This message is associated with Microsoft 365 "<a href="https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65949">https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65949</a>" Roadmap ID 65949.</p> <p>When this will happen We will begin a gradual rollout in mid-September (previously mid-August) and expect the rollout to be complete by the end of September (previously August).</p>	check before:	08/07/2020

Docu to check	User Knowledge base, Working instructions for IT Support
Linked Item Details	65949 Title : Microsoft Teams - Live Captions with speaker attribution 65949 Description: Teams already provides live captions as a way to follow along with what is being said in the meeting, we're also adding speaker attribution so captions will specify who is speaking.
MS Preparations	Live captions with speaker attribution is available in "https://techcommunity.microsoft.com/t5/microsoft-teams-blog/new-meeting-and-calling-experience-in-microsoft-teams/ba-p/1537581" new meeting and calling experiences.
MS How does it affect me	Live captions improved accessibility of Microsoft Teams. Identifying who is speaking when there are multiple speakers in a meeting makes live captions more useful and improves comprehension.  Note: Remarks made by participants joining from a conference room device will be attributed to the room rather than to an individual in the room.

<b>(Updated) Exportability of Security reports</b>		<b>MC219639</b>
Updated September 4, 2020: We have updated this post to ensure proper visibility. There are no changes to the content below. We are making changes so all security reports will now be exportable from the security and compliance center. This message is associated with Microsoft 365 Roadmap ID "https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66360" 66360 When this will happen We will begin rolling this out for standard and Germany datacenter customers at the end of August and expect to complete by mid-September. We will begin rolling this out for Government tenants in mid-September and expect to be complete by early October.		check before: <b>08/07/2020</b> Status: <b>Rolling out</b> Created: 08/01/2020 Product: Security and Compliance center, Exchange Platform: Web, World tenant Scope: Administration, Security Ring: General Availability

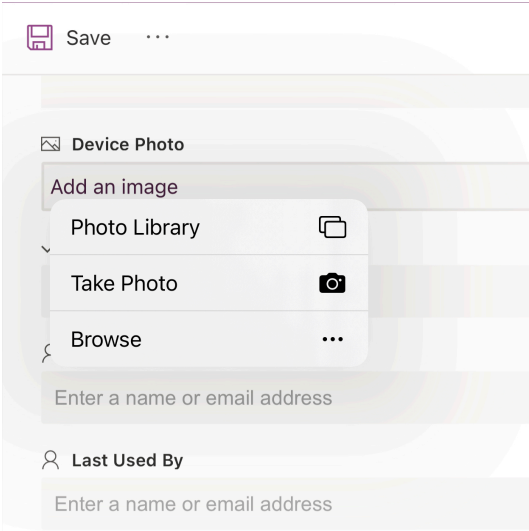

Links	66360
Docu to check	Working instructions for IT Support
Linked Item Details	66360 Title : Office 365 Advanced Threat Protection: Enabling export of security reports 66360 Description: We're adding the ability to export many of our security reports, including, but not limited to: Threat protection status report, mail flow status report, top malware, spoof detections, top senders and recipients, Office 365 ATP file types, URL protection report, and more.
More Info URL	<a href="https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/view-email-security-reports?view=o365-worldwide">https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/view-email-security-reports?view=o365-worldwide</a>
MS Preperations	You may consider updating your training and documentation as appropriate.
MS How does it affect me	Previously, security reports remained unexportable from the security and compliance center which limited security admin in their daily operation of analyzing their tenant security data in workloads such excel. With this new capability, security admin will now be able to directly export whatever information they desire from the reports we offer and not have to manually record data.

SharePoint lists and libraries - improved image columns	MC219652
---	----------

<p>Updated August 19, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below.</p> <p>We're introducing a new Image column type to lists and libraries. Using this column, list and library users will be able to add a single image file from their computer to an item in a list or a library.</p> <p>When this will happen We will be gradually rolling this out to Targeted Release customers at the end of August (previously early August) and expect to complete the rollout to all by mid-September (previously mid-August).</p> <p>This message is associated with Microsoft 365</p> <p>"<a href="https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=64872">https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=64872</a>" Roadmap ID 64872.</p>	check before:	08/07/2020

		Status:	
		Created:	08/11/2020
		Product:	Power Automate, Power apps
		Platform:	World tenant, Web, Online
		Scope:	Administration, User
		Ring:	
<p>We are excited to announce that early access for the 2020 wave 2 release (MC218287) for "https://docs.microsoft.com/power-platform-release-plan/2020wave2" Microsoft Power Platform was made available on August 3, 2020. This is a compilation of new capabilities that will be released between October 2020 and March 2021. The new features and enhancements demonstrate our continued investment to power digital transformation for our customers and partners.</p>			

<b>Links</b>	MC218287
<b>Docu to check</b>	Working instructions for IT Support
<b>Linked Item Details</b>	MC218287 Title : Microsoft Power Platform Release Wave 2
<b>MS Preperations</b>	<p>You can take advantage of the early access period by trying out the latest updates in a non-production environment and get ready to roll out updates to your users with confidence. For additional information, please visit the "<a href="https://aka.ms/EarlyAccessFAQ">https://aka.ms/EarlyAccessFAQ</a>" Early Access FAQ page. To learn more about the latest "<a href="https://dynamics.microsoft.com/business-applications/product-updates/">https://dynamics.microsoft.com/business-applications/product-updates/</a>" product updates and "<a href="https://dynamics.microsoft.com/business-applications/product-updates/#release-plans">https://dynamics.microsoft.com/business-applications/product-updates/#release-plans</a>" plans, and share your feedback in the community forum for "<a href="https://powerusers.microsoft.com/">https://powerusers.microsoft.com/</a>" Power Platform.</p>
<b>MS How does it affect me</b>	<p>Starting August 3, 2020, customers and partners have the ability to "<a href="https://docs.microsoft.com/en-us/power-platform/admin/opt-in-early-access-updates#how-to-enable-early-access-updates">https://docs.microsoft.com/en-us/power-platform/admin/opt-in-early-access-updates#how-to-enable-early-access-updates</a>" opt-in to early access and validate the latest features in a non-production environment. Starting August 10, 2020, customers that are a part of the Microsoft Government Cloud will have the option available in their administrative portal. These features include user experience enhancements that will be automatically enabled for users in production environments starting October 1, 2020. The "<a href="https://docs.microsoft.com/en-us/power-platform/admin/general-availability-deployment">https://docs.microsoft.com/en-us/power-platform/admin/general-availability-deployment</a>" deployment schedule is being finalized and will be available soon for reference.</p> <p>There are many features available for early access across for the "<a href="https://aka.ms/PowerPlatformEAFeatures">https://aka.ms/PowerPlatformEAFeatures</a>" Power Platform. We encourage application administrators to review these changes to understand the impact and determine if change management for new features is required.</p>

## (Updated) Multiple Number Dialing

MC220137

Updated September 03, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. We will update this Message center post once we have a new timeline. Thank you for your patience. Teams now supports dialing multiple numbers for a given user. This message is associated with Microsoft 365 "<https://www.microsoft.com/en-us/microsoft-365/roadmap?filters=searchterms=66194>" Roadmap ID 66194. When this will happenWe will update this post when we are ready to proceed.

## (Updated) Admin setting for PSTN participant phone number masking in Teams meetings

MC220415

Updated August 27, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

With MC209349 (April 2020) and MC217648 (July 2020), we added a level of privacy for participants who call in to a Teams meeting via audio conferencing (PSTN) by automatically masking any PSTN participant phone number to users from outside of your organization who might be on the call.

We are now adding an admin control for this feature.

This message is associated with Microsoft 365

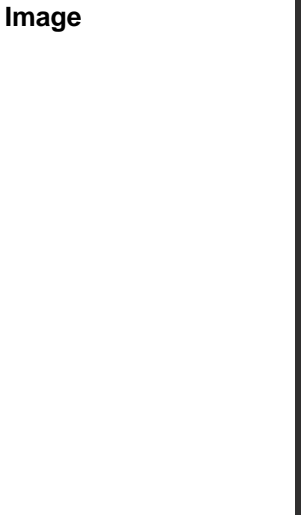

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67091)

365/roadmap?filters=searchterms=67091" Roadmap ID 67091.

When this will happenWe will begin rolling out this out in early September and expect the rollout to be complete by the end of October (previously September).

EOP/ATP Tenant Allow/Block list portal

61352

One of the ways Office 365 ATP protects customers is by blocking malicious attachments and URLs from reaching end users. We understand that from time to time, customers may want to ensure delivery of certain messages containing malicious content for specific reasons, such as phishing simulations and training. In order to provide a way for our customers to easily reconcile this at time of click and during mail flow, we're developing a portal to help you self-remediate. This portal gives admins the opportunity to explicitly allow or block attachments and URLs in your Office 365 tenant.

## New Advanced eDiscovery solution in Microsoft 365 for Gov clouds

64288

The Advanced eDiscovery solution in Microsoft 365 builds on the existing eDiscovery and analytics capabilities in Office 365. This new solution, called Advanced eDiscovery, provides a workflow to identify, preserve, collect, review, analyze, and export content that's responsive to your organization's internal and external investigations. It also lets legal teams manage the entire legal hold notification workflow to communicate with custodians involved in a case.

## SharePoint admin - New SharePoint admin center home page

57318

When you first land in the SharePoint admin center, we want it to be both familiar and useful at a glance. The idea is to provide a familiar experience, taking a similar design approach as the Microsoft admin center. You'll see more and more cards and graphs appear over time – so you can see insights on files, usage security, recommendations, training and so on. Better see what's happening, and then take the appropriate action.

## Access: SQL Date & Time Extended Data Type Integration

65420

To enhance syntax compatibility with SQL, and to increase the accuracy and level of detail in records that include dates/times, we are implementing a new "Date & Time Extended" data type into Access. This additional date & time type is directly compatible with SQL's DateTime2 data type, and it will include a larger date range (0001-01-01 through 9999-12-31), and higher-specified time precision (nanoseconds). The current DateTime data type will continue to operate as-is.

## Office 365 Advanced Threat Protection: Improvements to Threat Hunting with Threat Explorer and Real Time Detections

66467

As part of this work, we will be introducing additional enhancements when it comes to identifying threats within your organization. This includes the following updates: Addition of spam verdict within Threat Explorer, so that going forward you will be able to identify if a particular email was Malware, Phish or Spam. Introducing Threat Type Filter for All Email View, so that you can directly go to All-Email view and filter out the malicious emails. Showing Threats in URLs to identify the verdict associated with a URL (Malware, Phish, Spam or None). Introducing Additional Actions to identify the post delivery actions like ZAP or Manual Remediation which were applied to an email. Updating delivery location to show both Original and the latest delivery location for an email. Updating Email Timeline to make it simpler, and showing more details when it comes to showing information about post delivery events like ZAP. Enabling information about Tenant/User level Overrides applied on an email which may have impacted delivery location.

## Microsoft Information Protection adding support for double-byte character set languages

MC220972

<p>Coming soon, Microsoft Information Protection solutions such as Data Loss Prevention, Exact Data Match, and Communication Compliance will benefit from the ability to detect double-byte language characters found in East Asian languages, improving the ability to understand, label, and protect customer data. Initial languages supported are Japanese, Chinese (Simplified), Chinese (Traditional), and Korean.</p> <p>This change is associated with Microsoft 365 Roadmap ID "<a href="https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66363">https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66363</a>" 66363.</p> <p>When this will happen</p> <p>Rollout will begin in Japan, Korea, China, Hong Kong, Macau, and Taiwan in late August, and we will follow with worldwide rollout in mid-September. This will allow multi-national tenants that process double-byte character sets to benefit from this capability as well.</p> <p>We expect rollout to be complete in mid-October 2020.</p>	check before:	09/02/2020

<b>MS Preperations</b>	<p>You should consider updating your training and documentation as appropriate.</p> <p>Support for double-byte character set languages will be turned on by default. Review the "<a href="https://docs.microsoft.com/microsoft-365/compliance/mip-dbcsl-relnotes">https://docs.microsoft.com/microsoft-365/compliance/mip-dbcsl-relnotes</a>" Support for double-byte character set release notes documentation.</p> <p>Learn more about how this feature works with sensitive information types: "<a href="https://docs.microsoft.com/en-us/microsoft-365/compliance/create-a-custom-sensitive-information-type?view=o365-worldwide">https://docs.microsoft.com/en-us/microsoft-365/compliance/create-a-custom-sensitive-information-type?view=o365-worldwide</a>" Create a custom sensitive information type in the Security Compliance Center</p>
<b>MS How does it affect me</b>	<p>Support for double-byte character set languages accrues to any solution that requires proper word breaking. This includes the following:</p> <ul style="list-style-type: none"> <li>Custom keyword dictionaries of local language term</li> <li>Custom sensitive information types using regex/keywords</li> <li>Exact Data Match (EDM)</li> <li>Out-of-the-box sensitive information types commonly used for your market (e.g., Japanese My Number, Japan Resident Registration Number, Credit Card, China Resident Identity Card (PRC) number, etc.)</li> </ul>

## Microsoft Search admin navigation name change

MC221115

We're making some changes to the navigation name of Microsoft Search in admin center.  
When will this happen:  
We will be rolling out this change in early October 2020

check before: **09/04/2020**  
Status:  
Created: 08/29/2020  
Product: Microsoft 365 admin center, Microsoft Search  
Platform: World tenant, Online, Web  
Scope: Administration  
Ring:

**Docu to check** Working instructions for IT Support

**More Info URL** <https://docs.microsoft.com/MicrosoftSearch/search-intelligence-rename>

**MS Preperations** No action is needed on your part. Additionally, this change will not affect any URLs you may have bookmarked for Microsoft Search administration.  
Please click Additional Information to learn more.

**MS How does it affect me** Once implemented the only change will be to the admin portal name changing from Microsoft Search to Search intelligence.  
Note: This change will have no impact on your users or your organization. Your users can continue to use Microsoft Search as they already do. Your administrators can configure Answers and other Microsoft Search features as they already do.

---

## Machine learning feedback loop for trainable classifiers now in public preview

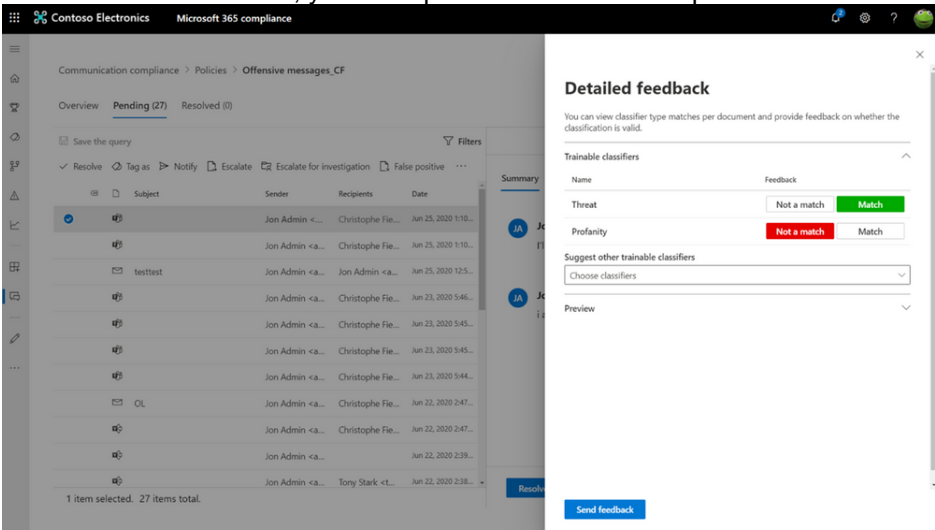

MC221133

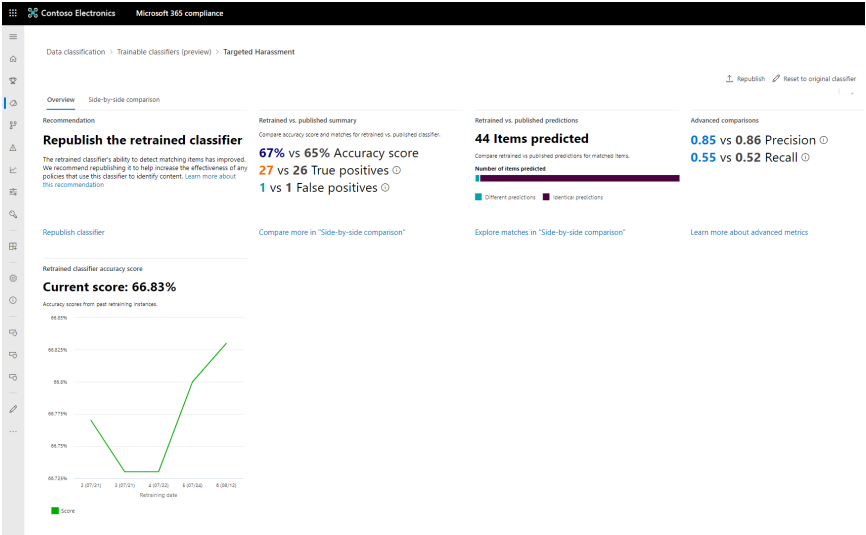

The machine learning feedback loop is designed to empower admins to improve performance for both custom and built-in trainable classifiers.  
This message is associated with Microsoft 365  
"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=65763" Roadmap ID 65763  
When this will happenWe will begin rolling this out in mid-September and expect the rollout to be complete by the end of September.

Muting Yammer communities from the Home Feed and the weekly digest mail

MC221296

Yammer offers two core discovery surfaces, the Home Feed and the weekly digest email. With this update, both end users and admins will be able to mute specific communities from both environments.

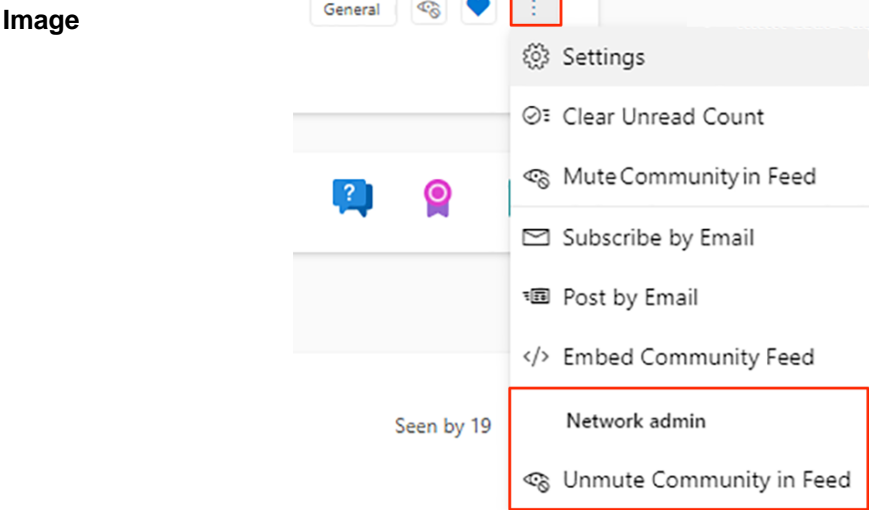

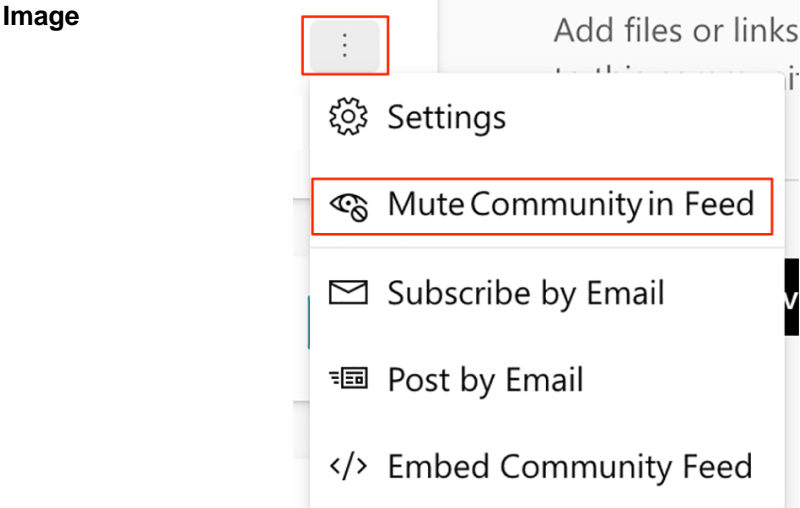

This message is associated with Microsoft 365

"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66129" Roadmap ID 66129

When this will happenWe will roll out this feature in early September.

check before:	09/08/2020
Status:	In development
Created:	09/02/2020
Product:	Yammer
Platform:	World tenant, Web
Scope:	Administration, User

Pictures in MC	<a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4EBqH?ver=092b">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4EBqH?ver=092b</a> <a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4ELLK?ver=d0a6">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4ELLK?ver=d0a6</a>
Docu to check	User Trainings, User Knowledge base
Linked Item Details	66129 Title : Yammer: Adding Ability to "Mute" Communities at Admin and User levels 66129 Description: Admins will be able to 'mute' Yammer communities so they don't appear in the feed for non-members. Members of the of those muted communities will still see these posts in their home feed. Users will be able to 'mute' Yammer communities so they don't appear in their feed.
MS Preperations	Until you take action, there is no change at the tenant-level. Before muting a community, we recommend creating a thoughtful policy to guide admin muting and recommend amplifying content as an effective tool to shape the conversation by " <a href="https://support.microsoft.com/office/feature-a-conversation-in-new-yammer-92469ece-8a63-424f-9ad6-802ad90fc5c4">https://support.microsoft.com/office/feature-a-conversation-in-new-yammer-92469ece-8a63-424f-9ad6-802ad90fc5c4</a> " featuring conversations. To mute or unmute a community, which affects only non-members, navigate to the community, open the ellipsis in the group header, and click "Mute Community in the Feed" or "Unmute Community in the Feed".
MS How does it affect me	The Yammer Home Feed and the weekly digest email allow users to discover relevant content from across their network; however, there are times when a specific community isn't relevant to an end user. This mute option gives users more control in customizing their Home Feed and their weekly digest email. In addition, admins will be able to mute a community tenant-wide for all who are not members of that community.

Microsoft Teams administrators will soon be able to upload a custom logo image for all tenant meetings; however it will be displayed only in meetings where the organizer has an Advanced Communication license. This message is associated with Microsoft 365 "https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67113" Roadmap ID 67113. When this will happen

The ability to upload the image will begin to appear in the Teams admin center in early September

The logo will appear in meetings by late September.

User Knowledge base

**Linked Item Details**

MC209710 Title : Teams meeting and chat experience improvements  
66459 Title : Teams: Updated functionality for downloading participant reports in Teams meetings  
66459 Description: Meeting organizers, especially teachers and event organizers, often need to know who joined and how many people joined their Teams meetings. With new enhancements, we'll allow you to download the report after the meeting within the Meeting Chat. We've also added new data into the report that allows you to better manage your attendance.

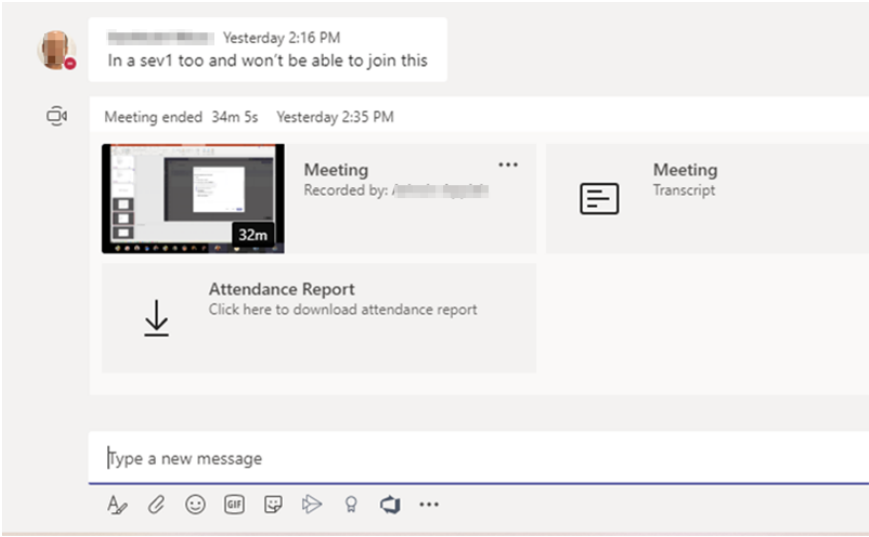

**MS Preparations**

When we introduced this feature in June, feature was disabled by default. It will remain off by default.  
We will not change your policy setting; this update will honor your current state, whether that is on or off.  
You can use a PowerShell cmdlet to turn this feature ON:  
Set-CsTeamsMeetingPolicy -Identity Global - AllowEngagementReport "Enabled"

**MS How does it affect me**

There are two areas of improvement:  
Download point changed from roster viewThe Teams meeting organizer can download the Attendance Report from the meeting chat once the meeting is over. Only the meeting organizer will see the Attendance Report. The recording, transcript and participant list will be grouped together in chat if the meeting is recorded. Otherwise, only the participant list will be available in chat.  
New participant dataThe report will now include these data points: duration, email address, meeting start time, and meeting title.

## Forms coming to the Office Mobile App

MC221015

Microsoft Forms is a web app which can be accessed from a browser on desktop or mobile devices. The Office Mobile app is a single mobile app (iOS / Android) that combines Word, PowerPoint and Excel with exclusive features.

We are now integrating Forms into the Office Mobile app so users will be able to open recent Forms and create new forms from the Office Mobile app.

This message is associated with Microsoft 365 Roadmap ID

"<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66631>" 66631

When this will happen:

Android: Rolling out for Insiders in September and expect to be complete for all customers in October

iOS: Planning to roll-out one month after Android. We will update this message as appropriate.

## New Feature: Inline message translation for Android

MC221732

Inline message translation lets users translate Teams mobile messages into the language they choose. This feature is now rolling out for Android; the iOS rollout is ongoing (MC216842, June 2020). This feature is also related to MC218683 (July 2020), which announced that the Teams inline message translation policy was changing to On by default.

This message is associated with Microsoft 365 Roadmap ID

"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=63226>" 63226.

When this will happen

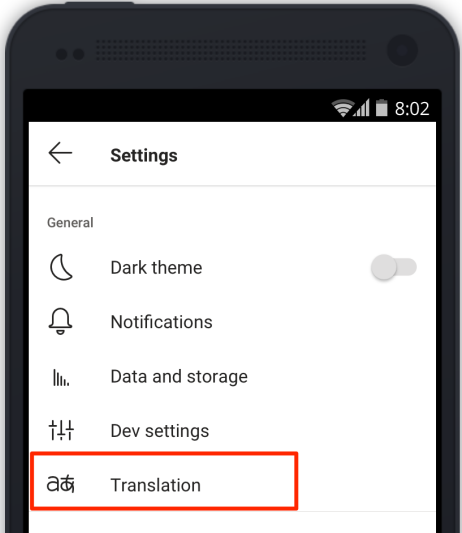

The updated Android app will be released to the store in mid-September 2020.

We anticipate that the rollout will be complete by mid-October.

## Flow Admin Center unavailable

MC222178

### Description:

Our internal monitoring has detected that you may have recently experienced failures when attempting to access Flow Admin Center. We have applied configuration changes to fix this issue.

How does this affect me?

You may have experienced failures prior to the changes. If you are still experiencing failures, please attempt to access the Admin Center through this "<https://admin.powerplatform.microsoft.com>">link as a temporary workaround.

For additional support, please contact Microsoft Support for assistance and reference ticket 205206374.

**Linked Item Details** MC217074 Title : (Updated) Microsoft Graph connectors for Microsoft Search are now available in Targeted Release

67139 Title : Microsoft Search: Microsoft Graph connectors for Microsoft Search

67139 Description: Microsoft Graph connectors for Microsoft Search provide a set of out-of-the-box search connectors that enable Microsoft 365 customers to connect Microsoft Search to disparate data sources outside of Microsoft 365. Microsoft Graph connectors for Microsoft Search include the following connectors available within the Microsoft 365 Admin Center: Windows File Share, ServiceNow, Microsoft SQL Server, intranet websites, MediaWiki, Azure Data Lake Storage Gen2, Azure DevOps, and Azure SQL.

67139 Url : <https://aka.ms/MicrosoftSearch/Connectors>

**More Info URL** <https://aka.ms/MicrosoftSearch/Connectors>

**MS Preparations** You may consider updating your training and documentation as appropriate.  
To learn more about Microsoft Graph connectors see the Additional Information.

**MS How does it affect me** Once available, Microsoft Graph connectors for Microsoft Search provide a set of out-of-the-box search connectors that enable Microsoft 365 customers to connect Microsoft Search to disparate data sources outside of Microsoft 365. Microsoft Graph connectors for Microsoft Search include the following connectors available within the Microsoft 365 Admin Center:

Windows File Share

ServiceNow

Microsoft SQL Server

intranet websites

MediaWiki

Azure Data Lake Storage Gen2

Azure DevOps, and Azure SQL.

Note:

All Microsoft 365 customers will have access to Microsoft Graph connectors from Microsoft

Microsoft 365 E3 or A3 customers will have access to Microsoft Graph connectors from Microsoft and partners.

Microsoft 365 E5 or A5 customers will have access to Microsoft Graph connectors from Microsoft and partners in addition to a base indexing capacity of 500 items per user.

check before:	09/29/2020
Status:	In development
Created:	09/23/2020
Product:	Exchange, Outlook
Platform:	Online, Web, World tenant
Scope:	AI, User
Ring:	General Availability

Outlook on the web is adding support for suggested replies for conversations in Chinese (People's Republic of China) for customers with mailboxes in the Asia-Pacific (APAC) region.

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?rtc=1&filters=searchterms=67126)

[365/roadmap?rtc=1&filters=searchterms=67126](https://www.microsoft.com/microsoft-365/roadmap?rtc=1&filters=searchterms=67126)" Roadmap ID 67126.

When this will happen

We will begin rolling this out to Targeted Release customers in late September.

We will begin rolling this out to Standard Release customers at the end of September.

The rollout will be complete in early October.

**Links** 67126

**Docu to check** User Knowledge base, User Trainings

**Linked Item Details** 67126 Title : Outlook: Outlook on the web - Suggested replies now available in Chinese (People's Republic of China)  
67126 Description: Outlook on the web is adding support for suggested replies for conversations in Chinese (People's Republic of China) for customers with mailboxes in the Asia-Pacific (APAC) region.

**MS Preperations** You might consider updating your user documentation and training.  
"<https://support.microsoft.com/office/use-intelligent-technology-in-outlook-on-the-web-and-outlook-com-24b30683-8340-4b69-b8ac-4193ec528a70>" Learn about suggested replies  
"<https://support.microsoft.com/office/change-the-time-zone-and-language-settings-in-outlook-on-the-web-65239869-12e7-4a9d-bca1-76b0ad7ce273>" Learn how to check or update your language settings in Outlook on the web

**MS How does it affect me** Suggested replies are short email responses that "<https://support.microsoft.com/office/use-intelligent-technology-in-outlook-on-the-web-and-outlook-com-24b30683-8340-4b69-b8ac-4193ec528a70>" appear at the bottom of an email message. When your users receive a message in email that can be answered with a short response, Outlook suggests three responses that they can use to reply with a couple of clicks.  
Outlook may suggest short responses to email messages when this rolls out to your tenant and (1) a user has a conversation in one of those languages; (2) their language setting in Outlook on the web is set to Chinese (People's Republic of China); and (3) their mailbox is located in the Asia-Pacific (APAC) region.

---

Advanced eDiscovery will now support linked content (modern attachments) from OneDrive and SharePoint Online (OD/SPO). Linked content can be shared in Teams and Yammer chat messages and Outlook emails.

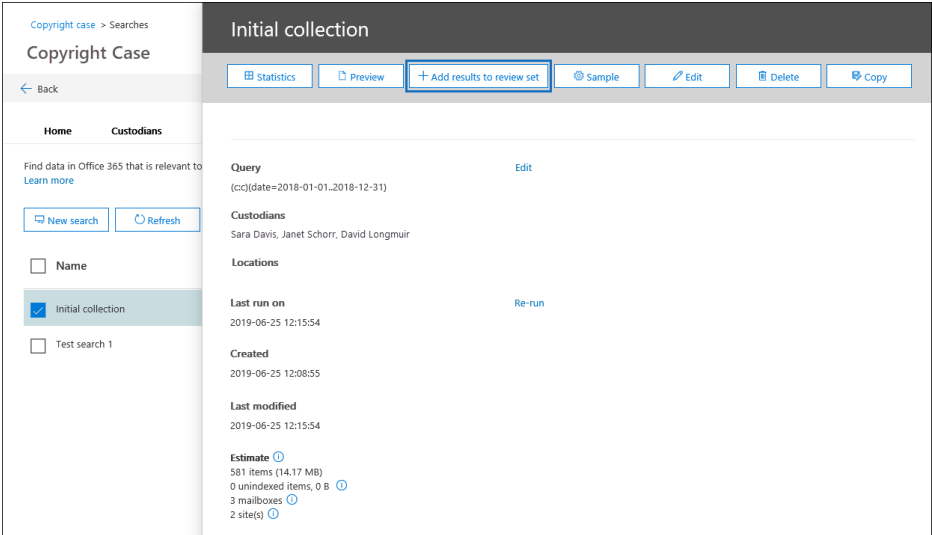

This message is associated with Microsoft 365"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66185>" Roadmap ID 66185.

When this will happenWe will begin rolling this out in late September and expect the rollout to be complete by the end of October.

<b>Docu to check</b>	Working instructions for IT Support
<b>Linked Item Details</b>	<p>66185 Title : Advanced eDiscovery: Supporting linked content from OneDrive and SharePoint Online (modern attachments)</p> <p>66185 Description: To help streamline discovery of linked content, Advanced eDiscovery natively groups linked content from OneDrive and SharePoint Online in the same family as the original Outlook email or Teams and Yammer chat message—streamlining the process of collecting, reviewing, and exporting the related content without additional configuration.</p>
<b>MS Preperations</b>	<p>Ask the Advanced eDiscovery manager in your organization to review this new functionality in a pre-production tenant and to determine how your organization might use this enhanced document retrieval in its investigations.</p> <p>Learn more:</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/compliance/add-data-to-review-set#define-options-to-scope-your-collection-for-review">https://docs.microsoft.com/microsoft-365/compliance/add-data-to-review-set#define-options-to-scope-your-collection-for-review</a>" Define options to scope your collection for review</p> <p>"<a href="https://techcommunity.microsoft.com/t5/microsoft-security-and/improving-ediscovery-workflows-and-enhancing-your-forensic/ba-p/1696658">https://techcommunity.microsoft.com/t5/microsoft-security-and/improving-ediscovery-workflows-and-enhancing-your-forensic/ba-p/1696658</a>" Improving eDiscovery workflows and enhancing your forensic investigations</p>
<b>MS How does it affect me</b>	<p>Advanced eDiscovery in Microsoft 365 provides an end-to-end workflow to preserve, collect, review, analyze, and export data that's responsive to your organization's internal and external investigations.</p> <p>When Advanced eDiscovery administrators and managers use the Search tool to identify relevant documents, they can add those search results to a review set.</p> <p>Exchange 2016 introduced document collaboration that allowed on-premises users to integrate attachments stored on OD/SPO directly into email sent from Outlook on the web. Document collaboration is now supported by all Outlook clients. Rather than attach a file to an email, users insert a link to a file that is stored in OD/SPO. This feature is often called modern attachments, and it reduces storage demands on the Exchange server. However, because these files are stored outside of the Exchange server, until now they were not included in a collection and review set. Your Advanced eDiscovery team now has three options for collecting the results of a search into a review set (pre-existing or new):</p> <p>Conversational review set (beta) Select this to see email and chat enabled as threaded conversations.</p> <p>Enable retrieval for modern attachment Select this to review documents referenced in Outlook as a modern attachment (a link to a SPO/ODB source) as well as any SPO/ODB documents that are included as a link in Outlook or Teams.</p> <p>Include versions from SharePointSelect this to make a copy of all versions of a SharePoint file per the version limits and search parameters of the collection.</p>

## Compliance

additions from 64167:

Make an assessment if confident or sensitive data might be exposed via Microsoft Lists to external parties.

## Recommendations

additions from 64167:

You should check in which way the new Microsoft lists feature product fits into your landscape especially in terms of task management another lists. Also, the Microsoft landscape in terms of Microsoft to do and planner should be evaluated.

## Links

64167

## Config Options

additions from 64167:

It is expected that the new Microsoft Lists feature can be disabled in the sub-SKU licensing part or via another switch if not needed.

## Opportunities

additions from 64167:

With Microsoft Lists you can let you use is easily create lists with some logic without a IT or developer involvement.

## Comments

additions from 64167:

Microsoft Lists home (web) and mobile app – Create new lists, share and access recent and favorite lists in one location

Microsoft Teams + Microsoft Lists – Create a new list or embed an existing list directly in a Teams channel - combining lists with side-by-side conversation

Ready-made templates help you get started quickly – Jumpstart common scenarios with preconfigured structure, forms, views, and formatting

Customizable views, smart rules, and sharing keep everyone in sync

## Description

additions from 64167:

Track issues, assets, routines, contacts, inventory and more using customizable views and smart rules and alerts to keep everyone in sync.

## Records Management: Regulatory record labels

MC222757

As announced at Ignite, we're introducing the public preview of regulatory record labels which further enhance immutability of labeled items. These new labels prevent metadata changes, records movements, and records versioning. They also block users and administrators from removing a label once applied.

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=&searchterms=63062)

365/roadmap?filters=&searchterms=63062" Roadmap ID 63062.

When this will happen This feature is available now worldwide.

### Linked Item Details

63062 Title : Records Management: Regulatory Records (public preview)

63062 Description: Provides customers the ability to declare items in SharePoint Online as regulatory items. These labels are more stringent label vs record labels. Targeted to Financial services or other industries who have WORM compliance requirements. Will update the Cohasset assessment to include SharePoint Online.

63062 Url : <https://docs.microsoft.com/en-us/microsoft-365/compliance/records-management?view=o365-worldwide>

### MS Preparations

Review a "<https://docs.microsoft.com/microsoft-365/compliance/records-management#compare-restrictions-for-what-actions-are-allowed-or-blocked>" detailed comparison of the restrictions a regulatory record label enforces, including which actions are allowed or blocked.

If you would like to take advantage of this new functionality, "<https://docs.microsoft.com/microsoft-365/compliance/declare-records>" here's how to get started.

"<https://docs.microsoft.com/microsoft-365/compliance/records-management>" Learn about records management in Microsoft 365.

### MS How does it affect me

If your organization requires records to comply with high immutability standards, you can leverage regulatory record labels to enforce the maximum restrictions available in Microsoft 365.

This new capability, when configured as recommended, can help you meet SEC 17a-4, FINRA Rule 4511, and CFTC Rule 1.31 (c) – (d) requirements for SharePoint, OneDrive for Business, Exchange email messages, and certain Teams and Skype for Business content.

## Changes in classic form customizations in modern lists and libraries

MC222880

We are changing how customized forms work inside SharePoint lists and libraries that will affect tenants using the SharePoint classic experience.

Key points

Timing: late October to late November

Roll-out: tenant level

Control type: user control

Action: review and assess by October 25, 2020

check before:

Exchange: Block sending to a Distribution Group when it’s on the BCC line

67096

	check before:	10/31/2020
	Status:	In development
	Created:	08/19/2020
	Product:	Exchange, Outlook
	Platform:	US Instances, Education, Germany
	Scope:	Administration, User, Compliance
	Ring:	General Availability
<p>The high message traffic on some groups can lead to Inbox clutter and noise, especially when many members use Reply All to respond on the thread. To reduce the noise many people will create an Inbox Rule to move incoming group messages to a specific folder. Some well-intended senders will put the group on the Bcc line so recipients can’t Reply All to the whole group. But Inbox Rules doesn’t evaluate any recipient on the Bcc line, so doing so effectively breaks the rule so the message ends up in the Inbox, thus contributing to the inbox clutter the user was trying to avoid. When this feature ships we’ll enable the ability for group and distribution list owners and admins to block sending to a group if the group is put on the Bcc line. If a user puts such a group on the Bcc line and sends the message, it’ll be rejected with a non-delivery report (NDR) saying Bcc’ing this group isn’t allowed.</p>

<b>Microsoft Compliance Center: Expanded support to search and export items in SharePoint and OneDrive for Business Recycle Bin in Core eDiscovery and Advanced eDiscovery</b>		<b>67092</b>
Traditionally, when a site is on hold, the files in the Recycle Bin would be stored in the Preservation Hold library. In cases when a site is not on hold, there is no way to search or export items in the Recycle Bin. The eDiscovery and SharePoint Online teams are making architectural changes that will make the Recycle Bin (both first-stage and second-stage Recycle Bins) in SharePoint Online and OneDrive for Business searchable and exportable by eDiscovery Managers. That means organizations can search and export items in the Recycle Bin regardless of whether a site is on hold or not	check before:	<b>11/30/2020</b>

## Send from proxy addresses (aliases) from OWA

59437

		check before:	11/30/2020
The ability to send email from a proxy address (aka alias) other than the sender's primary SMTP address is useful in multiple scenarios, such as mergers and acquisitions when you need the to send from multiple branded domain names, or sending on behalf of a team or department, like info@contoso.com. And of course, having the FROM and REPLY TO boxes preserve that alias when the recipient sees it is just as important. So to kick-off our journey to provide you and your users with the flexibility to send email using alias, we're excited to announce that soon Outlook on the web (aka OWA) will natively support the ability to choose the sender or FROM from a drop-down list right within the compose pane. And when the recipient receives that message, the FROM and REPLY TO will show that alias, regardless where the recipient's mailbox happens to live.		Status:	In development

## Microsoft 365 admin center: Enhanced management capabilities in Microsoft Defender Antivirus for SMB IT admins

67118

New management capabilities that make it easier for small and medium-sized businesses to get visibility into how Defender Antivirus is protecting the Windows 10 devices in their organizations. From the Microsoft 365 admin center, IT admins will be able to view active threats in their environment, understand which users and devices are affected by them, which of these were blocked or quarantined, and where a review is needed. These admins will also have oversight from one place to see which devices are running Microsoft Defender Antivirus, if those are up to date, and where action is needed. The new capabilities apply to all Windows 10 devices that are enrolled in Microsoft Intune with a Microsoft 365 Business Premium subscription plan.

**(Updated) Retiring Teams mobile support for devices running on Android 4.4****MC217681**

Updated August 18, 2020: We have updated this post to clarify that this impacts Teams mobile.

We will be retiring the Teams mobile support on Android 4.4. Instead we recommend that users upgrade to newer Android builds, which is where we will continue to invest.

Key Points:

Major: Retirement

Timeline: August 1, 2020

Action: Review and assess impact

check before:	<b>08/01/2020</b>

**MS Preparations** Instead of using Android 4.4, we recommend updating the Android OS version to 5 and above.

**MS How does it affect me** If you have devices running Android version 4.4 You are receiving this message because our reporting indicates one or more users in your organization are using Android mobile devices that has Android version 4.4  
The exiting Teams build 1.0.0.2020050801 will continue to work on Android 4.4 for the next 2 months but there won't be any app updates going forward.

## Upcoming Exchange Device Access and Conditional Access changes with Outlook mobile

---

MC216824

Recently, we discovered that certain Azure Active Directory Conditional Access policies prevented Exchange Online device access rules from being applied to Outlook for iOS and Android. For example, customers with a conditional access policy that required Multi-factor authentication (MFA) resulted in Exchange Online not processing device access rules for Outlook for iOS and Android.

Beginning in August 2020, we will roll out changes in Exchange Online to ensure that only certain Conditional Access policies bypass Exchange's device access rules. Specifically, only Conditional Access policies configured with the following grant access controls will prevent Exchange device access rules being applied to Outlook for iOS and Android:

- Require device to be marked as compliant

- Require approved client app

- Require app protection policy

Key Points:

Timing: Beginning of August

Action: Review and assess organizational impact

check before:	<b>08/01/2020</b>

<b>More Info URL</b>	<a href="https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261">https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261</a>
<b>MS Preperations</b>	<p>Organizations have a few different options to prepare for this change:</p> <p>Implement Microsoft Endpoint Manager and one of the above grant access controls. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#leveraging-enterprise-mobility--security-suite-to-protect-corporate-data-with-outlook-for-ios-and-android">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#leveraging-enterprise-mobility--security-suite-to-protect-corporate-data-with-outlook-for-ios-and-android</a>" Leveraging Enterprise Mobility + Security suite to protect corporate data with Outlook for iOS and Android.</p> <p>Create an Exchange Online device access rule that allows Outlook for iOS and Android. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#option-1-block-all-email-apps-except-outlook-for-ios-and-android">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/secure-outlook-for-ios-and-android#option-1-block-all-email-apps-except-outlook-for-ios-and-android</a>" Block all email apps except Outlook for iOS and Android.</p> <p>Manually add the user's Outlook for iOS and Android Device ID to the user's ActiveSyncAllowedDeviceIDs property. To obtain the Device ID, use "<a href="https://docs.microsoft.com/powershell/module/exchange/get-mobiledevicestatistics?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/get-mobiledevicestatistics?view=exchange-ps</a>" Get-MobileDeviceStatistics. To add the Device ID to the user's ActiveSyncAllowedDeviceIDs property, see "<a href="https://docs.microsoft.com/powershell/module/exchange/set-casmailbox?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/set-casmailbox?view=exchange-ps</a>" Set-CASMailbox.</p> <p>Change the default access level to Allow. For more information, see "<a href="https://docs.microsoft.com/powershell/module/exchange/set-activesyncorganizationsettings?view=exchange-ps">https://docs.microsoft.com/powershell/module/exchange/set-activesyncorganizationsettings?view=exchange-ps</a>" Set-ActiveSyncOrganizationSettings. This change allows all mobile devices, regardless of type, to connect.</p> <p>Alternatively, organizations can retain their default mobile device access level and wait for this change to take place and manually allow each device as they are quarantined/blocked.</p> <p>Important: Because Outlook for iOS and Android's device IDs are not governed by any physical device ID, the ID can change without notice. When this happens, it can cause unintended consequences when device IDs are used for managing user devices, as existing 'allowed' devices may be unexpectedly blocked or quarantined by Exchange. Therefore, we recommend administrators only set mobile device access policies for Outlook for iOS and Android that allow/block devices based on device type or device model.</p> <p>For more information on this change, see "<a href="https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261">https://techcommunity.microsoft.com/t5/exchange-team-blog/upcoming-exchange-online-device-access-and-conditional-access/ba-p/1464261</a>" Upcoming Exchange Online Device Access and Conditional Access changes with Outlook mobile.</p>
<b>MS How does it affect me</b>	<p>If you are utilizing Conditional Access policies that do not leverage the above grant access controls and have configured the mobile device access level within Exchange Online to either block or quarantine devices, users using Outlook for iOS and Android will be blocked or quarantined by Exchange Online after this change is implemented. By default, the mobile device access level in Exchange Online is set to allow.</p> <p>If you are utilizing Conditional Access policies with the above grant access controls, your users will not be affected.</p>

---

Beginning the week of August 31st, 2020, Outlook for Android will be extending its support of mobile device mailbox policy settings to include the AllowBluetooth setting which will be used to disable wearable sync for those customers that do not have Microsoft Intune.

Outlook for Android supports Android and Tizen wearable technology. When the Outlook app is installed on the wearable, the user can receive message notifications and event reminders, interact with messages, and view daily calendars. For data to synchronize to the Outlook app installed on Android or Tizen wearable devices, the wearable must be connected to the Android device via Bluetooth.

By default, Outlook for Android supports a model where wearable sync is enabled.

For more information on what Outlook scenarios are specifically supported on Tizen wearables, see

["https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen"](https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen)

<https://galaxystore.samsung.com/geardetail/com.microsoft.office.outlook.tizen>.

Microsoft offers an in-market solution where Intune customers can leverage Intune App Protection Policies to disable wearable technology.

This solution prevents any data from being synchronized to the wearable device from the work or school account when protected by an Intune App Protection Policy. For more information, see

["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios) Deploying Outlook for iOS and Android app configuration settings.

Outlook for Android does support Exchange Online's mobile device mailbox policy framework. Outlook for Android consumes the

["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/exchange-activesync/mobile-device-mailbox-policies"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/exchange-activesync/mobile-device-mailbox-policies) mobile device mailbox policy and acts based on what policy settings are configured. The mobile device mailbox policy is evaluated when Outlook for Android connects to Exchange Online. Today, Outlook for Android only supports the PIN and encryption client policy settings (see ["https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies"](https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies) Managing Outlook for iOS and Android for more information).

With the change at the end of August, when Outlook consumes the Exchange mobile device mailbox policy, Outlook will act on the AllowBluetooth setting's value when an Intune App Protection Policy is not applied to the work or school account:

When AllowBluetooth is enabled (default behavior) or configured for HandsfreeOnly, wearable synchronization between Outlook on the Android device and Outlook on the wearable is allowed for the work or school account.

When AllowBluetooth is disabled, Outlook for Android will disable synchronization between Outlook on the Android device and Outlook on the wearable for the specified work or school account (and delete any data previously synced for the account). Disabling the synchronization is controlled entirely within Outlook itself; Bluetooth is not disabled on the device or wearable nor is any other wearable app affected.

Status:

Created: 07/29/2020

Product: Intune, Outlook

Platform: Android, iOS, mobile

Scope: Security, Administration, MDM

Ring:

<b>Docu to check</b>	Service Description, Automation / Scripts
<b>MS Preperations</b>	<p>If your organization would like to disable the synchronization of Outlook for Android data onto Android or Tizen wearables, you have two options:</p> <p>For Intune customers, leverage Intune App Protection Policies to disable wearable sync. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#data-protection-scenarios</a>" Deploying Outlook for iOS and Android app configuration settings.</p> <p>For non-Intune customers, leverage Exchange Online mobile device mailbox policies and disable the AllowBluetooth setting to disable wearable sync. For more information, see "<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/manage-outlook-for-ios-and-android#using-mobile-device-access-and-mobile-device-mailbox-policies</a>" Managing Outlook for iOS and Android.</p>
<b>MS How does it affect me</b>	<p>Your organization will likely fall into one of these categories:</p> <p>If your organization is utilizing Intune App Protection Policies, there will be no change to the behavior of Outlook for Android and wearable device sync.</p> <p>If your organization is not using Intune App Protection Policies and has configured an Exchange Online mobile device mailbox policy that has disabled AllowBluetooth, your Outlook for Android users will lose access to Outlook data on wearable devices.</p> <p>If your organization is not using Intune App Protection Policies and has configured an Exchange Online mobile device mailbox policy that has enabled AllowBluetooth (the default setting), your Outlook for Android users will continue to access Outlook data on wearable devices.</p>

## Notifications about Outlook mobile in Outlook

**MC219490**

<b>MS How does it affect me</b>	Users who use Outlook with their work or school accounts but are not using Outlook mobile may see a notice that they can get Outlook for their phone. If they dismiss the notice or start to use Outlook mobile, the notification will not reappear. A quick link or scannable code will be provided to simplify downloading the app to the mobile device of their choice.

<b>(Udpated) Outlook for Mac: Preview toggle of new experience in Insider Slow</b>	<b>MC219576</b>
--	-----------------

Updated September 1, 2020: This message has been updated to ensure it is displaying as intended. There are no changes to the content.

We are releasing the ability to preview the new Outlook for Mac for all Insider Slow users via a toggle that will be turned off by default. Insider Slow users can turn on the "New Outlook" toggle located at the top right of the Outlook window and experience all of the updates. They can switch quickly between the new Outlook for Mac experience and the current version in production.

Note: If your organization does not use Outlook for Mac or users are not part of Insiders Slow you can disregard this message.

The new Outlook for Mac experience has been updated to enhance performance and elevate productivity, is powered by the Microsoft Cloud, and connects using Microsoft sync technology. It brings updates across Mail, Search, and Calendar experiences that are designed for simplicity, reliability, and customization. The updated experience is carefully crafted and specifically designed with the power of Microsoft Services to provide suggestions and insights that are relevant to you, and simplicity to enable you to customize the experience.

This message is associated with Microsoft 365 RoadmapID

"<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=27287>" 27287

When this will happen

This will be available beginning on July 30, 2020.

<b>MS How does it affect me</b>	You are receiving this message because your organization may be using Skype for Business Online. While your organization will no longer be able to use Skype for Business Online once the service is retired 12 months from now, you may continue to use Microsoft Teams as part of your existing Microsoft 365 licensing agreement.	

Usage reports in the Microsoft 365 Center and Teams Admin Center will be updated to align with one another and ensure they are consistent with how Teams “active user” is already defined in Microsoft’s financial reporting and public disclosures. In those disclosures, we define “Daily Active User” as the maximum daily users performing an intentional action in the last 28-day period across the desktop client, mobile client and web client. Examples of an intentional action includes starting a chat, placing a call, sharing a file, editing a document within teams, participating in a meeting, and others. We strip out passive actions like auto boot, minimizing a screen, or closing the app. We also de-duplicate all actions across a single user ID.

With this update, the definition of “active user” in the Microsoft 365 and Teams Admin Centers will align with the definition for “Daily Active User” to include a more comprehensive set of intentional user actions and provide visibility into the use of more recently added features such as priority notifications. The usage reports will include usage of the free version of Teams in addition to users covered by paid licenses, for those organizations that have a combination of free and paid.

These updates to usage reports will provide customers with more accurate and granular visibility into how users in your organization are using Teams. In many cases these changes will result in changed usage numbers than previous reports were showing.

This message is associated with Microsoft 365 Roadmap ID

"<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66163>" 66163

When this will happen:

We will begin rolling this out at the end of August and expect to be complete by mid-September.

## SharePoint lists and libraries - improved image columns

MC219652

Updated August 19, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below.

We're introducing a new Image column type to lists and libraries. Using this column, list and library users will be able to add a single image file from their computer to an item in a list or a library.

When this will happen We will be gradually rolling this out to Targeted Release customers at the end of August (previously early August) and expect to complete the rollout to all by mid-September (previously mid-August).

This message is associated with Microsoft 365

Linked Item Details	64872 Title : SharePoint lists and libraries - Improved Image columns 64872 Description: Upload a new image – including mobile camera support. You can add a new Image column to lists and libraries. When creating or editing items in that list or library, you can upload an image for that list item of file.
MS Preparations	You might want to notify list and library users, update your user training, and prepare your help desk. Learn more: "https://support.microsoft.com/office/list-and-library-column-types-and-options-0d8ddb7b-7dc7-414d-a283-ee9dca891df7" List and library column types and options.
MS How does it affect me	List and library users will see a new column type called Image when adding new columns. Once an Image column is added to a list or library, users can: Add an image using the list or library form. View, replace, or remove the image when viewing the item or file properties in the form. When users are browsing the list on a mobile device, they will be able to upload an image from the mobile device simply by taking a photo with their camera.

<b>(Updated) Exportability of Security reports</b>		<b>MC219639</b>
		check before: <b>08/07/2020</b>
Updated September 4, 2020: We have updated this post to ensure proper visibility. There are no changes to the content below.		Status: <b>Rolling out</b>
We are making changes so all security reports will now be exportable from the security and compliance center.		Created: 08/01/2020
This message is associated with Microsoft 365 Roadmap ID "https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66360" 66360		Product: Security and Compliance center, Exchange
When this will happen		Platform: Web, World tenant
We will begin rolling this out for standard and Germany datacenter customers at the end of August and expect to complete by mid-September.		Scope: Administration, Security
We will begin rolling this out for Government tenants in mid-September and expect to be complete by early October.		Ring: General Availability

Links	66360
Docu to check	Working instructions for IT Support
Linked Item Details	66360 Title : Office 365 Advanced Threat Protection: Enabling export of security reports 66360 Description: We're adding the ability to export many of our security reports, including, but not limited to: Threat protection status report, mail flow status report, top malware, spoof detections, top senders and recipients, Office 365 ATP file types, URL protection report, and more.
More Info URL	<a href="https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/view-email-security-reports?view=o365-worldwide">https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/view-email-security-reports?view=o365-worldwide</a>
MS Preparations	You may consider updating your training and documentation as appropriate.
MS How does it affect me	Previously, security reports remained unexportable from the security and compliance center which limited security admin in their daily operation of analyzing their tenant security data in workloads such excel. With this new capability, security admin will now be able to directly export whatever information they desire from the reports we offer and not have to manually record data.

(Updated) Speaker attribution in Live Captions		MC219651
<p>Updated September 15, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below</p> <p>Teams already provides live captions as a way to follow along with what is being said in a meeting. We will soon add speaker attribution to captions so that everyone knows who is speaking.</p> <p>This message is associated with Microsoft 365</p> <p>"<a href="https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65949">https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65949</a>" Roadmap ID 65949.</p> <p>When this will happen We will begin a gradual rollout in mid-September (previously mid-August) and expect the rollout to be complete by the end of September (previously August).</p>	check before:	08/07/2020

Linked Item Details	65949 Title : Microsoft Teams - Live Captions with speaker attribution 65949 Description: Teams already provides live captions as a way to follow along with what is being said in the meeting, we're also adding speaker attribution so captions will specify who is speaking.
MS Preparations	Live captions with speaker attribution is available in "https://techcommunity.microsoft.com/t5/microsoft-teams-blog/new-meeting-and-calling-experience-in-microsoft-teams/ba-p/1537581" new meeting and calling experiences.
MS How does it affect me	Live captions improved accessibility of Microsoft Teams. Identifying who is speaking when there are multiple speakers in a meeting makes live captions more useful and improves comprehension.  Note: Remarks made by participants joining from a conference room device will be attributed to the room rather than to an individual in the room.

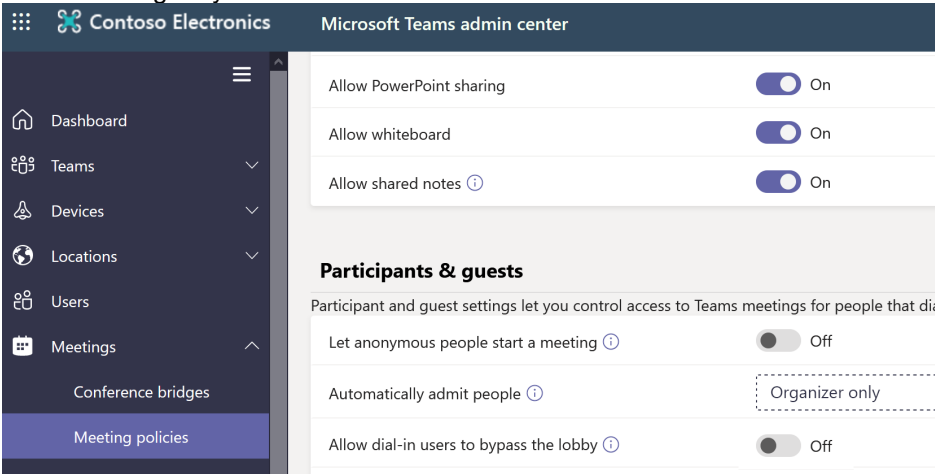

Image

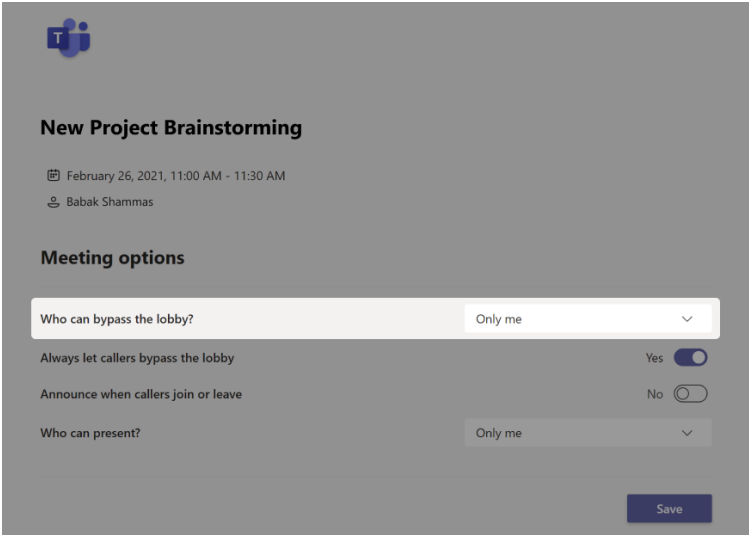

<b>(Updated) Introducing the Organizer only Teams meeting lobby policy option</b>		<b>MC219629</b>
Updated September 18, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below		check before: <b>08/07/2020</b>
In May (MC214522), we introduced a new user setting, Only me, that meeting organizers could select when configuring the "Who can bypass lobby?" setting for a Teams meeting. We are now making it possible for you to set Teams meeting defaults in your organization so that only meeting organizers can bypass the lobby.		Status: <b>Rolling out</b>

Docu to check	Working instructions for IT Support, User Knowledge base
Linked Item Details	<p>MC214522 Title : (Updated) New Teams meeting setting - require meeting participants to use the lobby</p> <p>66463 Title : Microsoft Teams - New meeting lobby configuration setting available for PowerShell and Teams Admin Center</p> <p>66463 Description: A new lobby type option is coming to PowerShell and Teams Admin Center that allows tenant administrators to assign a user-level policy to send everybody but the Teams meeting organizer into the meeting lobby. Once assigned, all meeting attendees--including those from within the same organization--will be sent to the meeting lobby to be admitted by the organizer.</p>
MS Preperations	<p>In addition to making this change via a new control in the Teams admin center, you can adjust the csTeamsMeetingPolicy setting for AutoAdmittedUsers using PowerShell. This new setting is "OrganizerOnly".</p> <p>Note: you have to explicitly assign this new value, "OrganizerOnly", to users. The introduction of this new setting does not change your current default setting.</p>
MS How does it affect me	<p>Currently, the tenant-level default setting for "Automatically admit people?" is Everyone in your organization. The other two options are Everyone in your organization and federated organizations or Everyone (no restriction). Although individuals can limit direct meeting access to the meeting organizer, you cannot currently make that a default setting for a given user or set of users. With this change, you will have a fourth option. You will be able to set "Automatically admit people" to Organizer only (most restrictive).</p> <p>Once you have assigned this value to any user, their default meeting settings will be that only the organizer can join directly; all attendees will need to enter via lobby.</p> <p>Once this is your tenant default, it applies to all new meetings created by the user.</p> <p>Should you make this the default setting, any prior meeting where the organizer did not modify the Meeting options.</p> <p>Meeting organizers can select Meeting options in the meeting invitation to change this setting for each meeting they schedule.</p>

**Override Anyone link expiration policy for individual OneDrive**

**MC219777**

Last year, we made it possible for tenant and SharePoint administrators to use PowerShell to override the organization's expiration policy on a per site collection basis. With this update, tenant and SharePoint administrators will be able to run the same PowerShell to override the anyone link expiration policy on an individual user's OneDrive. When this will happenThis feature will begin rolling out in early August; we expect rollout to be complete by end of August.

## Microsoft Power Platform Release Wave 2 early access

MC220124

We are excited to announce that early access for the 2020 wave 2 release (MC218287) for "<https://docs.microsoft.com/power-platform-release-plan/2020wave2>" Microsoft Power Platform was made available on August 3, 2020. This is a compilation of new capabilities that will be released between October 2020 and March 2021. The new features and enhancements demonstrate our continued investment to power digital transformation for our customers and partners.

**Links** MC218287

**Docu to check** Working instructions for IT Support

**Linked Item Details** MC218287 Title : Microsoft Power Platform Release Wave 2

**MS Preparations** You can take advantage of the early access period by trying out the latest updates in a non-production environment and get ready to roll out updates to your users with confidence. For additional information, please visit the "<https://aka.ms/EarlyAccessFAQ>" Early Access FAQ page. To learn more about the latest "<https://dynamics.microsoft.com/business-applications/product-updates/>" product updates and "<https://dynamics.microsoft.com/business-applications/product-updates/#release-plans>" plans, and share your feedback in the community forum for "<https://powerusers.microsoft.com/>" Power Platform.

**MS How does it affect me** Starting August 3, 2020, customers and partners have the ability to "<https://docs.microsoft.com/en-us/power-platform/admin/opt-in-early-access-updates#how-to-enable-early-access-updates>" opt-in to early access and validate the latest features in a non-production environment. Starting August 10, 2020, customers that are a part of the Microsoft Government Cloud will have the option available in their administrative portal. These features include user experience enhancements that will be automatically enabled for users in production environments starting October 1, 2020. The "<https://docs.microsoft.com/en-us/power-platform/admin/general-availability-deployment>" deployment schedule is being finalized and will be available soon for reference. There are many features available for early access across for the "<https://aka.ms/PowerPlatformEAFeatures>" Power Platform. We encourage application administrators to review these changes to understand the impact and determine if change management for new features is required.

## Move files and easily keep sharing

MC220127

When your end users move a file from OneDrive to a SharePoint site collection, or from a SharePoint site collection to a OneDrive, or from a SharePoint site collection to another SharePoint site collection, they will have the option to easily continue sharing the file with their collaborators at the new destination.

This message is associated with Microsoft 365

"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=65907>" Roadmap ID 65907.

When this will happen

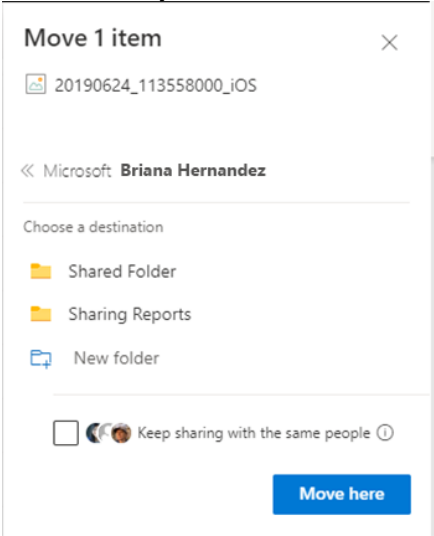

We will begin rolling this out to production in mid-August and expect to complete that rollout by early September.

We expect to complete rollout to all environments by the end of September.

MS How does it affect me	"https://www.microsoft.com/microsoft-365/blog/2020/07/01/introducing-new-onedrive-features-to-share-and-collaborate-across-work-and-life/" Move and keep sharing is a new feature that allows your end users to easily re-share a file with all the direct collaborators (e.g., the users who had previously received a share for that file) should it be moved. If an end user chooses to do so, we will provide direct collaborators with the new link or with direct permissions that match those that they had at the source location. We will also send collaborators an e-mail that notifies them that the file has been moved should the owner reshare the file location. When your users move files across site collection boundaries, they will see this new option. It is unchecked by default.

**Docu to check** User Knowledge base, User Trainings, Working instructions for IT Support

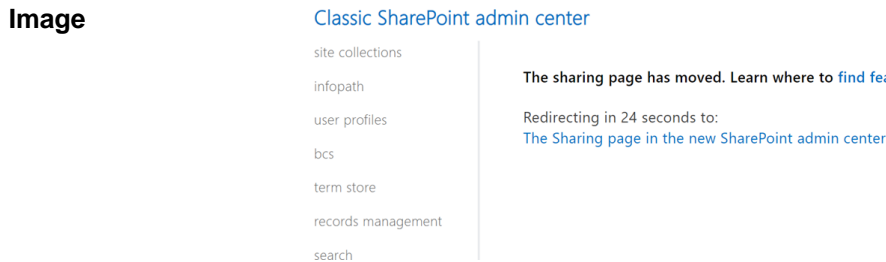

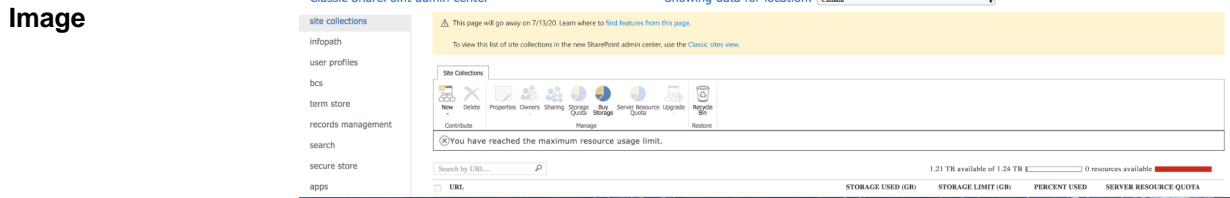

**MS Preperations** You may consider updating your training and documentation as appropriate.  
For admins:

- "https://docs.microsoft.com/sharepoint/site-collections-page" Find site collection features in the new SharePoint admin center.
- "https://docs.microsoft.com/sharepoint/control-access" Find access control features in the new SharePoint admin center.
- "https://docs.microsoft.com/sharepoint/sharing-settings" Find sharing settings in the new SharePoint admin center.
- "https://docs.microsoft.com/sharepoint/manage-geo-locations" Find geo location features in the new SharePoint admin center.

**MS How does it affect me** Admins will start to see a banner on these four classic pages. The banner will display the date when the page will be retired along with a link to documentation that describes where to find all the features in the new admin center. Sample below:

After the retirement date, these classic pages will be replaced with redirect pages to the new SharePoint admin center so that any bookmarks continue working. Sample below

It's not possible to opt out of this change and preserve these pages.

We are making changes to how Teams meetings and join links are accessible for meeting organizers who have had their scheduling capabilities revoked. Today, Teams meeting URLs can be accessed before, during, and after the scheduled meeting time, even if the scheduling permission for the meeting organizer has been revoked after the meeting was created.

To implement this change, we are adjusting the behavior of some settings in csTeamsMeetingPolicy to give additional control to the Tenant Admins. Tenant admins can now control and define the expiration of meetings created and scheduled by their users.

This change does not impact any scheduled meetings for organizers who continue to have the ability to schedule Teams meetings (as defined by Meeting Policy). You can find additional details on this change below.

Key points:

Microsoft 365 Roadmap ID: "<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66921>" 66921

Timing: start rolling out in early September and complete by the end of September.

Control: "<https://docs.microsoft.com/MicrosoftTeams/meeting-expiration>" policies in Teams admin center or PowerShell

Action: review and assess impact

Links	66921
Docu to check	User Knowledge base, Working instructions for IT Support
Linked Item Details	<p>66921 Title : Microsoft Teams: Updated meeting creation and expiration policies</p> <p>66921 Description: We are making changes to how Teams meetings and join links are accessible for meeting organizers who have had their scheduling capabilities revoked.</p>
MS Preperations	<p>If you have users who have been assigned any of these settings with value "False" (or policy toggle OFF) you may consider notifying those users about the impact.</p> <p>If you would like users to continue to access previously created meetings you may consider changing their settings to "True," or have an individual with appropriate policy settings, create a replacement meeting.</p> <p>Additional information about meeting policies are explained here:</p> <p>"<a href="https://docs.microsoft.com/MicrosoftTeams/meeting-expiration">https://docs.microsoft.com/MicrosoftTeams/meeting-expiration</a>" Meeting policies and meeting expiration in Microsoft Teams</p>

**MS How does it affect me** Once this change is implemented, users who have any of these policies set to "False" will see a change in experience.

What does it mean to expire meeting join coordinates?

Once a meeting has been expired, the meeting can no longer be joined, whether through the meeting join link and/or Audio Conferencing—attempting to join the meeting will result in a failure. Any related conversations, files, whiteboards related to the meeting are preserved and unaffected, and can still be accessed. This includes channel meetings (both scheduled and meet now), scheduled meetings, and private meet now meetings.

Toggling policies from ON -> OFF

When a particular meeting type policy/knob is ON, users can create and schedule meetings and everyone can join. Once the knob is OFF, users are unable to create or schedule new meetings of that type. At the same time, we will expire that user's previously scheduled meetings to reflect their new abilities, including any meetings that they created and hosted in the past when they were allowed had the necessary permissions. This will ensure that there are no remaining, previously-joinable meetings that the user may have created that are no longer allowed.

Toggling policies from OFF -> ON

Toggling the policy from OFF to ON will enable the assigned user to create the respective meeting type. In the event that a user's meeting scheduling permissions were disabled and have been re-enabled (meeting type policy knob is ON), any previously scheduled (and expired) meetings in the past will be enabled and can be accessed with the former join links. This can be useful in the event that a user's permission was inadvertently disabled.

Expiring Scheduled Private Meetings

AllowPrivateMeetingScheduling (Control – schedule private meetings from Teams client)

AllowOutlookAddin (Control – schedule private meetings from Outlook, Win/OWA/Mobile)

To expire all private meetings (both scheduled and held in the past, as well as those scheduled in the future) of a given user (where they are the meeting organizer), turn off both

AllowPrivateMeetingScheduling and AllowOutlookAddin by setting to False (OFF) for the meeting organizer (Host)

This will prevent the joining of:

all meetings which happened in the past scheduled by this user.

all meetings which are already scheduled but will happen in future.

future instances of any ongoing recurring meeting scheduled by the individual user.

Special considerations:

If your Outlook scheduling is True (via AllowOutlookAddin=TRUE) and Teams scheduling is off (via AllowPrivateMeetingScheduling=False), your existing meetings will be unaffected by this change.

If your Outlook scheduling is False and Teams scheduling is true, your existing meetings will be unaffected by this change.

Expiring Scheduled Channel Meetings for a given meeting host/organizer

Turn off AllowChannelMeetingScheduling to False to expire all the past and future (already scheduled) channel meeting of a given user (where she is the meeting organizer).

This will prevent the joining of:

all meetings which happened in the past scheduled by this user.

all meetings which are already scheduled but will happen in future.

future instances of any ongoing recurring meeting scheduled by the individual user.

Expiring Private Meet Now meetings already started by a given user

Turn off AllowPrivateMeetNow to False so that any previous Meet Now instances created by that user is expired.

This will prevent join of all meetings which happened in the past scheduled by this user.

Expiring Channel Meet Nows started by a given user

Turn off AllowMeetNow to False so that all the previous Meet now ad-hoc meetings created by this user in Channels created by that user is are expired.

This will prevent join of all meetings which happened in the past scheduled by this user in Channels.

Special considerations:

The impacted users can continue to join meetings created/organized by other users.

Access to meeting artifacts (meeting chat, notes, recordings, transcripts, files, etc.) will remain available and will not be deleted.

When the invite involves a delegate relationship between a boss/admin, the Meeting Policy applied to the meeting is the Meeting Policy of the boss, who is the creator of the meeting.

---

## Announcing self-service purchase capabilities for Project and Visio

MC220282

check before:

08/19/2020

We shared last year that Microsoft is enabling individuals and teams to purchase select services directly. Today we are announcing that self-service purchasing capabilities are coming soon for Microsoft Project and Microsoft Visio products. Individuals worldwide (excluding India) will be able to acquire a subscription for these products as early as September 15, 2020:

"<https://products.office.com/visio/visio-plan-1?activetab=pivot:overviewtab>"

Visio Plan 1 and "<https://products.office.com/visio/visio-plan-2?rtc=1activetab=pivot:overviewtab>" Visio Plan 2

"<https://products.office.com/project/project-plan-1?activetab=pivot%3aoverviewtab>" Project Plan 1 and

"<https://products.office.com/project/project-plan-3?activetab=pivot:overviewtab>" Project Plan 3

Note: This change will not impact any existing settings you may have in place to manage self-service purchasing. Additionally, self-service purchase capabilities are not available for customers who are eligible for Government or Education offers.

<b>MS How does it affect me</b>	<p>As an administrator, if you prefer to limit these capabilities, you can do so on a per-product basis. Project and Visio are available for control starting today via</p> <p>"<a href="https://www.powershellgallery.com/packages/MSCommerce/">https://www.powershellgallery.com/packages/MSCommerce/</a>" PowerShell. You can also take control of any of your user's self-service purchases, allowing you to move them from a self-service purchase to another license or to cancel their subscriptions completely. Additionally, we've released the ability for users who are prevented from making their own purchases to make a request for a license or for you as an admin to point users to an existing license request process. These features will give you the ability to control how users acquire software within your organization.</p> <p>For additional information on controlling self-service purchase, see</p> <p>"<a href="https://www.powershellgallery.com/packages/MSCommerce/">https://www.powershellgallery.com/packages/MSCommerce/</a>" AllowSelfServicePurchase for the MSCommerce PowerShell module.</p> <p>For questions about self-service purchase, including how it may impact your organization, please refer to the "<a href="https://aka.ms/self-service-purchase-faq">https://aka.ms/self-service-purchase-faq</a>" self-service purchase FAQ.</p>

## Microsoft Teams retirement of DMG on October 6th 2020 for macOS

**MC220258**

	check before:	<b>08/19/2020</b>
We will be retiring distribution of the macOS MS Teams client via DMG file starting on August 7th 2020 with DMG distribution being fully retired by October 6th 2020. Instead we recommend the utilization of Teams via our standard PKG file, which is where we will continue to invest.	Status:	
Note: If your organization does not use macOS you can safely disregard this message.	Created:	08/13/2020
Key points:	Product:	Teams
Major: Retirement	Platform:	Mac
Timing: August 7th in app notifications, October 6th redirect enforced	Scope:	MDM, Administration
Action: review and assess	Ring:	

<b>Docu to check</b>	Automation / Scripts
<b>MS Preperations</b>	Instead of using DMG, we recommend moving to PKG as soon as possible.
<b>MS How does it affect me</b>	<p>You are receiving this message because our reporting indicates one or more users in your organization are potentially using this DMG approach. Starting on August 7th your users will receive an in app notice of the upcoming change via a dismissible banner with a link to a download of the PKG file. After October 6th, 2020, there will be a redirect in place for clients running Teams on DMG, where they will referred to a PKG download of the application.</p> <p>Users will no longer be able to use versions of Teams running from the DMG, when this change is implemented.</p>

## **(Updated) Microsoft Authenticator App Lock will be enabled by default**

**MC220224**

Updated September 15, 2020: We have completed the rollout for iOS. The rollout for Android is taking longer than expected. We apologize for the inconvenience. Please see the updated roll-out timeline below

If you do not have users who are using the

"<https://docs.microsoft.com/azure/active-directory/user-help/user-help-auth-app-overview>" Microsoft Authenticator app on their mobile devices for two-factor authentication, you may safely ignore this message.

Microsoft Authenticator "<https://docs.microsoft.com/azure/active-directory/user-help/user-help-auth-app-faq>" App Lock will soon be "<https://techcommunity.microsoft.com/t5/azure-active-directory-identity/microsoft-authenticator-app-lock-now-enabled-by-default/ba-p/1257368>" enabled by default if the user has set up a PIN or biometric on the device.

When this will happen

For iOS, we are rolling this out gradually in mid-August and should be complete by the end of August. Complete

For Android, we are rolling this out gradually in late September (previously August) and should be complete by mid-October (previously mid-September).

Updated August 27, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below	Status:	In development
With MC209349 (April 2020) and MC217648 (July 2020), we added a level of privacy for participants who call in to a Teams meeting via audio conferencing (PSTN) by automatically masking any PSTN participant phone number to users from outside of your organization who might be on the call.	Created:	08/15/2020
	Product:	Teams
	Platform:	Online, World tenant
	Scope:	Administration, User, Compliance
	Ring:	General Availability

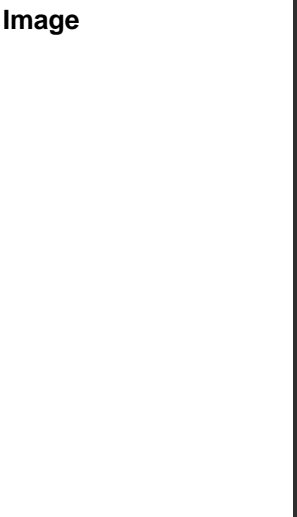

We are now adding an admin control for this feature.

This message is associated with Microsoft 365

"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67091>" Roadmap ID 67091.

When this will happenWe will begin rolling out this out in early September and expect the rollout to be complete by the end of October (previously September).

Docu to check	Working instructions for IT Support, User Knowledge base
Linked Item Details	MC209349 Title : Teams updates to provide enhanced meeting and administration controls, and security enhancements 67091 Title : Microsoft Teams: Enable tenant administrators to configure masking of PSTN participant phone numbers 67091 Description: For customers with Audio Conferencing enabled for their Teams meetings, we are providing the ability for tenant administrators to define how Audio Conferencing participants' phone numbers appear in the roster view for meetings scheduled within their organization: masked to external users, masked for everyone, or off (visible to everyone).
MS Preperations	You will initially be able to change this setting via a PowerShell cmdlet. We will update this post with those details when they are available.
MS How does it affect me	There is no direct impact or change on your users; the default setting will continue to mask participant phone numbers only for external users. With this control, you can disable masking or you can mask phone numbers (PSTN) from all meeting participants (both internal and external).

For Outlook mobile clients, Microsoft is adding automatic signing and automatic message encryption using Secure Multipurpose Internet Mail extensions (S/MIME) as well as providing end user options to extend delegate mailbox permissions.

These updates are related to Microsoft 365 roadmap IDs

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67271)

## Announcements for Microsoft Edge Legacy and for using Microsoft 365 apps and services on Internet Explorer 11

MC220490

In order to provide the best experience for our customers, we will be focusing our efforts on modern browser support over the coming year. As a result, Microsoft 365 services and applications will no longer support Internet Explorer 11 (IE 11); Microsoft 365 apps and services will be unable to connect, or have a degraded feature experience, when accessed on IE 11. Additionally, the Microsoft Edge Legacy desktop application will experience end of support; after support ends, it will not receive new security updates. The following notification outlines key dates which you should be aware of. Please note that the IE 11 changes are specific to Microsoft 365 services and apps; IE 11 is a component of the Windows operating system and will

"<https://docs.microsoft.com/lifecycle/faq/internet-explorer-microsoft-edge>" follow the Lifecycle Policy for the product on which it is installed.

Microsoft Teams (web app)

Timing: The Microsoft Teams web app will no longer support Internet Explorer 11 beginning November 30, 2020.

Action: To access Microsoft Teams, use the Win-32 app, the new Microsoft Edge, or another supported browser.

Microsoft 365 applications and services (excluding Microsoft Teams)

Timing: Microsoft 365 apps and services (excluding Microsoft Teams) will no longer support Internet Explorer 11 beginning August 17, 2021.

Action: To access Microsoft 365 apps and services, use the new Microsoft Edge, another supported browser, or an applicable Win-32 app (if available).

Microsoft Edge Legacy desktop application

Timing: End of support for the Microsoft Edge Legacy desktop app will occur on March 9, 2021.

Action: To continue using a supported browser, transition to the new Microsoft Edge.

<b>MS Preperations</b>	<p>To address these announcements, upgrade to the new Microsoft Edge prior to the dates indicated. Microsoft 365 apps and services will continue to support the new Microsoft Edge.</p> <p>The new Microsoft Edge is the planned replacement for Microsoft Edge Legacy; if you already have the new Microsoft Edge on your device(s), no action is required.</p> <p>Additional Information</p> <p>If you'd like help to upgrade all your organization's devices to the new Microsoft Edge, "<a href="https://docs.microsoft.com/fasttrack/win-10-microsoft-edge-assistance-offered">https://docs.microsoft.com/fasttrack/win-10-microsoft-edge-assistance-offered</a>" FastTrack can help with deployment and configuration at no additional charge for customers with eligible Microsoft 365 subscriptions.</p> <p>For help with web app and site compatibility, "<a href="https://docs.microsoft.com/fasttrack/win-10-app-assure-assistance-offered">https://docs.microsoft.com/fasttrack/win-10-app-assure-assistance-offered</a>" learn more about the App Assure program.</p> <p>"<a href="https://aka.ms/AA99plv">https://aka.ms/AA99plv</a>" Read more about these changes in the Lifecycle announcement."<a href="https://aka.ms/AA97tsw">https://aka.ms/AA97tsw</a>" Our blog also provides more information about these announcements.</p> <p>We always value feedback and questions from our customers. Please feel free to submit either feedback or questions via Message Center.</p>
<b>MS How does it affect me</b>	<p>After the dates listed above, Microsoft 365 apps and services will need to be accessed via the new Microsoft Edge, another supported browser, or through an applicable Win-32 app (if available). The new Microsoft Edge browser provides a faster, more responsive experience for Microsoft 365 apps and services. You can also still run business-critical, Internet Explorer-based apps and sites in the new Microsoft Edge through Internet Explorer mode.</p> <p>After March 9, 2021, the Microsoft Edge Legacy desktop application will no longer be supported and will not receive new security updates. Move to the new Microsoft Edge before that date to ensure your organization is using an up-to-date browser.</p>

---

Updated August 28, 2020: We've updated this post to ensure that it is appropriately visible for organizations. There is no change to the content. When a user runs an Office app, such as Word or Excel, diagnostic information is collected and saved to log files on the user's device. These log files contain information about the processes and components running in the application, and can help detect, diagnose, and fix issues and help make improvements to Office. This information is very similar to optional diagnostic data that may already be collected subject to applicable privacy settings, but is more detailed and helps provide more context about technical issues that might occur when using Office apps.

We want to let you know that these log files could be sent to Microsoft only if you have chosen to enable the collection and processing of ["https://docs.microsoft.com/deployoffice/privacy/optional-diagnostic-data"](https://docs.microsoft.com/deployoffice/privacy/optional-diagnostic-data) optional diagnostic data by Microsoft. Note that even when you've enabled the processing of optional diagnostic data, Microsoft may not always collect these log files. We would process these files only in those situations where we think the additional information could be useful in resolving an issue.

Key points:

Timing: If you have enabled the collection and processing of optional diagnostic data, it will begin in mid September.

Controls: Admin - ["https://docs.microsoft.com/en-us/deployoffice/privacy/manage-privacy-controls#policy-setting-for-diagnostic-data"](https://docs.microsoft.com/en-us/deployoffice/privacy/manage-privacy-controls#policy-setting-for-diagnostic-data) Policy setting for diagnostic data

Action: review and assess impact

The change will initially apply to Office on devices running Windows, beginning with Version 2008 of Microsoft 365 Apps in Current Channel.

Log files could be sent for the following Office apps:

- Excel
- OneNote
- PowerPoint
- Word

Log files could also be sent for Version 2008 and later of Project and Visio.

In the coming months, this change will also apply to Outlook as well as Office running on Mac, iOS, and Android devices.

For the latest information about which versions of Office and which operating systems this change applies to, see

["https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf"](https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf) Overview of diagnostic log files for Office

<b>MS Preperations</b>	<p>No specific action is required on part. If you have chosen to allow optional diagnostic data to be sent to Microsoft, then these log files may be sent to Microsoft.</p> <p>If you don't allow optional diagnostic data to be sent to Microsoft, these diagnostic log files will still be created and saved on the user's device, but the log files will not be sent to or processed by Microsoft.</p>
<b>MS How does it affect me</b>	<p>These log files don't include a user's name or email address, the content of the user's files, or information about apps unrelated to Office.</p> <p>These log files can help detect, diagnose, and fix issues and help make improvements to Office. For example, the additional information in these log files could help us identify the underlying reason why a user has a problem saving a file to the device running Office. In those situations, it would be beneficial for those log files to be sent to Microsoft.</p> <p>The log files are initially saved under %temp%\Diagnostics on devices running Windows. These files are in CSV format and can be viewed using applications like Excel.</p> <p>For more information about these log files, see "<a href="https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf">https://support.microsoft.com/office/fba86aac-70dc-4858-ae1f-ec2034346cdf</a>" Overview of diagnostic log files for Office.</p> <p>You can use the Diagnostic Data Viewer (DDV) to see when these log files are sent to Microsoft. The DDV also shows the location on the user's device where you can find a copy of the log files that are sent to Microsoft. For more information about the DDV, see "<a href="https://support.microsoft.com/office/cf761ce9-d805-4c60-a339-4e07f3182855">https://support.microsoft.com/office/cf761ce9-d805-4c60-a339-4e07f3182855</a>" Using the Diagnostic Data Viewer with Office.</p>

## Simplified way to manage your Teams notification settings

**MC220702**

Users will soon be able to configure and customize their Teams notification settings through a newly designed notifications settings section for the Teams desktop app and Teams online.

This message is associated with Microsoft 365 "<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=65636>" Roadmap ID 65636.

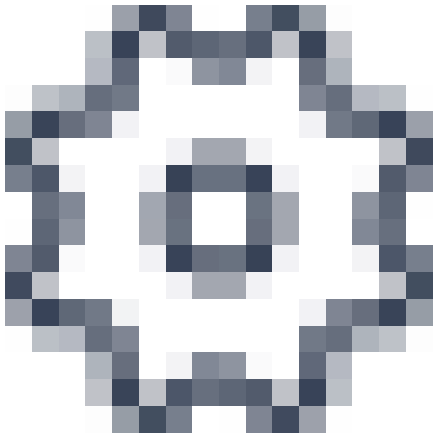

When this will happen

We will begin rolling this out in early September 2020; we expect the rollout to be complete in mid-September.

## Results from PowerBI coming to Microsoft Search in SharePoint and Office.com

MC220668

We're updating Microsoft Search in SharePoint and Office.com to include results from PowerBI.

This message is associated with Microsoft 365  
"https://www.microsoft.com/microsoft-365/roadmap?searchterms=67103"  
Roadmap ID 67103.

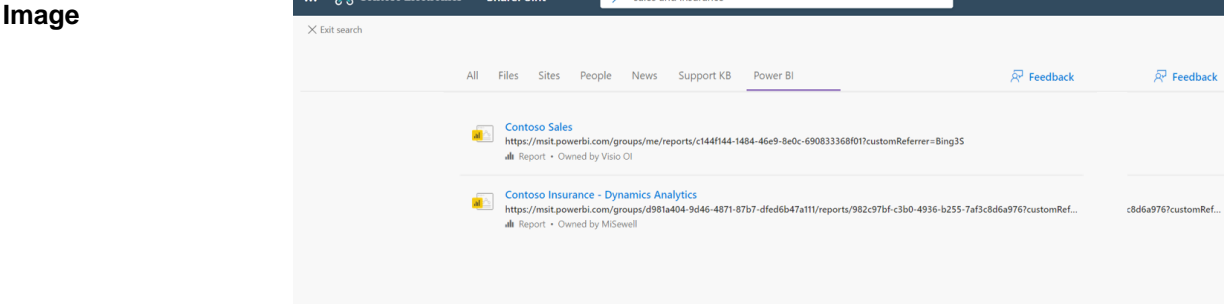

When this will happen

We are rolling this out to Targeted Release tenants in late August 2020, and we expect the rollout to be complete by early September.

Standard Release tenants will begin to see this feature in mid-September, and we expect the rollout to be complete by late September.

check before:	08/27/2020

**(Updated) New Feature: Manage how long guests can access SharePoint Online and OneDrive documents**

---

**MC220791**

Updated September 11, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

You will soon be able to create a policy that automatically revokes access for external guests to "<https://docs.microsoft.com/sharepoint/sites/sites-and-site-collections-overview#overview-of-sharepoint-sites>" target="\_blank" style="">>SharePoint Online (SPO) sites and individual OneDrives after a defined period of time.

This message is associated with Microsoft 365

<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=43797>" Roadmap ID 43797.

When will this happen

We will begin rolling out to targeted release tenants by the end of September and standard release by mid-October.

We expect to complete the rollout the end of November.

check before:	<b>08/28/2020</b>

## Description

additions from 43797:

External shares must not longer be actively revoked. External shares can now automatically expire.

## Pictures in MC

<http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4sOGm?ver=b734>

## Docu to check

User Knowledge base, Service Description

## Linked Item Details

43797 Title : OneDrive: Expiring access for external users

43797 Description: Admins and end users can expire shares to external users.

## MS Preperations

If you plan to enable this feature, be sure to inform your SharePoint site administrators and users about the new process so that "<https://support.microsoft.com/office/manage-guest-expiration-for-a-site-25bee24f-42ad-4ee8-8402-4186eed74dea>" they are prepared to manage guest access as needed.

You can enable this policy, which applies to both SPO and OneDrive, in the SharePoint admin center.

Until you enable the policy, there will be no change in how long new guests may access shared content.

## MS How does it affect me

One of the strengths of SharePoint and OneDrive is that it facilitates sharing and collaborating among peers, not only within an organization but also with people outside the organization (guests). In order to "<https://docs.microsoft.com/sharepoint/turn-external-sharing-on-or-off>" better manage sharing, tenant admins will be able to create a policy to revoke guest access to SPO sites and individual OneDrives after a defined period of time. With this policy, you can limit guest user access; thus guests who are no longer active partners will not retain indefinite access to documents and files.

This policy is not retroactive; it does not apply to guests who already have access to sites, documents and files.

The policy applies to a user's access to a given SPO site or individual OneDrive. When the access period reaches your policy threshold, such as 10 days, then the guest loses access to all content in that site. Guest access expires on a site-by-site basis, determined by when the guest was granted access to each site, whether that is an SPO site or an individual OneDrive.

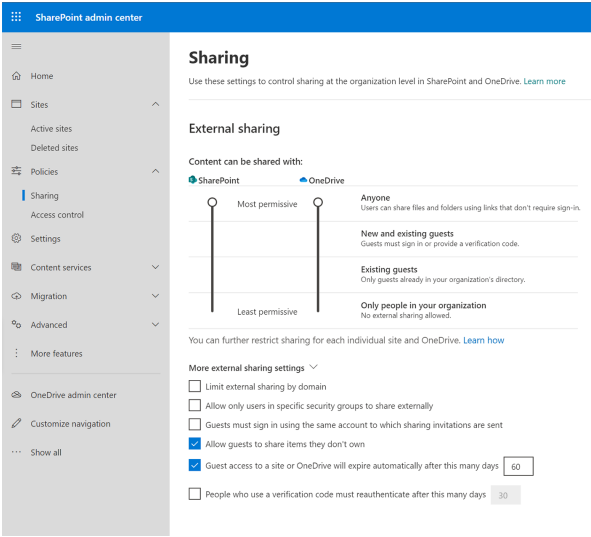

After a guest loses access to a site, any user with the ability to share content externally can re-invite the guest to each document or item as needed.

SharePoint site administrators can extend access at any time, up to the limit of the tenant policy.

For example, if the tenant policy is 10 days, and today is the 10th of the month, the SharePoint site admin could extend access for an external guest to the 20th of the month. There is no limit on the number of time a site admin can extend access.

SharePoint site administrators will receive e-mail notifications advising of upcoming guest user access expirations.

SharePoint: General Availability of SharePoint Syntex

67134

Microsoft SharePoint Syntex uses advanced AI and machine teaching to amplify human expertise, automate content processing, and transform content into knowledge. SharePoint Syntex will be available as a user-based add-on for Microsoft 365 plans and will be generally available to Microsoft 365 commercial customers on October 1, 2020.

## Visio: Self-service purchase capabilities for Visio

67124

Microsoft is enabling individuals and teams to purchase some Microsoft Visio product directly with their business domain. Self-service purchasing capabilities will allow individuals worldwide (excluding India) to acquire a subscription for Visio Plan 1 and Visio Plan 2. Self-service purchase capabilities are not available for customers who are eligible for Government or Education offers.

## Microsoft 365 admin center: Microsoft 365 Priority Accounts

67145

As the admin of a Microsoft 365 organization, you can now monitor failed or delayed email messages sent to your users who have a high business impact, like your CEO. You can enable this by adding users to your priority accounts list. Priority accounts are accounts that are essential to running your organization. Add executives, leaders, managers or other users who have access to sensitive or high priority information. The priority accounts feature is available only to organizations that meet both of the following requirements: Office 365 E3 or Microsoft 365 E3, or Office 365 E5 or Microsoft 365 E5; and at least 10,000 licenses and at least 50 monthly active Exchange Online users.

## (Updated) New Riverbed CDN available in Microsoft Teams

**MC220515**

Updated September 22, 2020: We have updated the timeline below. Thank you for your patience. Soon you will be able to use a new Enterprise Content Delivery Network (CDN), Riverbed, should you need a CDN for live events in Microsoft Teams.

When this will happen

We will begin rolling this out in early September and expect the rollout to be complete by late September (previously mid-September).

MS Preperations

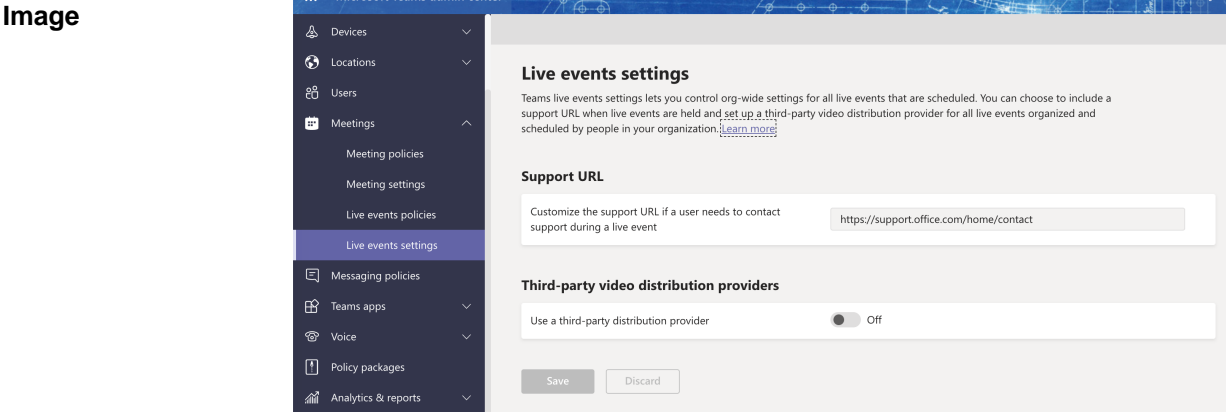

http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4Dwkm?ver=0b72

Working instructions for IT Support

You can select Riverbed via PowerShell, and Riverbed will be an option in the Microsoft Teams admin center.  
- Set-CsTeamsMeetingBroadcastConfiguration -AllowSdnProviderForBroadcastMeeting \$True - SdnProviderName riverbed -SdnApiTemplateUrl "{API template URL provided by Riverbed}" - SdnApiToken "{API token GUID provided by Riverbed}"  
Microsoft Teams admin center > Meetings > Live events settings  
Learn more:  
"https://docs.microsoft.com/microsoftteams/teams-live-events/what-are-teams-live-events" What are Microsoft Teams live events?

MS How does it affect me

Riverbed, the industry standard in network optimization, will soon support Microsoft 365 customers. You will be able to accelerate Teams traffic to increase workforce productivity.  
This change gives you another CDN provider that you can use for live events in your tenant. Your current selection should not be impacted by this addition.

Microsoft Teams: Update to the format Meeting Invitations for Microsoft Teams		67094
Microsoft Teams Meetings Invites are getting a formatting update to make meetings easier to join. The new format will support all the same meeting invite customization Teams supports today.	check before:	08/31/2020

**Office 365 Advanced Threat Protection: Improvements to Threat Hunting with Threat Explorer and Real Time Detections****66467**

As part of this work, we will be introducing additional enhancements when it comes to identifying threats within your organization. This includes the following updates: Addition of spam verdict within Threat Explorer, so that going forward you will be able to identify if a particular email was Malware, Phish or Spam. Introducing Threat Type Filter for All Email View, so that you can directly go to All-Email view and filter out the malicious emails. Showing Threats in URLs to identify the verdict associated with a URL (Malware, Phish, Spam or None). Introducing Additional Actions to identify the post delivery actions like ZAP or Manual Remediation which were applied to an email. Updating delivery location to show both Original and the latest delivery location for an email. Updating Email Timeline to make it simpler, and showing more details when it comes to showing information about post delivery events like ZAP. Enabling information about Tenant/User level Overrides applied on an email which may have impacted delivery location.

## New Advanced eDiscovery solution in Microsoft 365 for Gov clouds

64288

The Advanced eDiscovery solution in Microsoft 365 builds on the existing eDiscovery and analytics capabilities in Office 365. This new solution, called Advanced eDiscovery, provides a workflow to identify, preserve, collect, review, analyze, and export content that's responsive to your organization's internal and external investigations. It also lets legal teams manage the entire legal hold notification workflow to communicate with custodians involved in a case.

## EOP/ATP Tenant Allow/Block list portal

61352

One of the ways Office 365 ATP protects customers is by blocking malicious attachments and URLs from reaching end users. We understand that from time to time, customers may want to ensure delivery of certain messages containing malicious content for specific reasons, such as phishing simulations and training. In order to provide a way for our customers to easily reconcile this at time of click and during mail flow, we're developing a portal to help you self-remediate. This portal gives admins the opportunity to explicitly allow or block attachments and URLs in your Office 365 tenant.

## Access: SQL Date & Time Extended Data Type Integration

65420

To enhance syntax compatibility with SQL, and to increase the accuracy and level of detail in records that include dates/times, we are implementing a new "Date & Time Extended" data type into Access. This additional date & time type is directly compatible with SQL's DateTime2 data type, and it will include a larger date range (0001-01-01 through 9999-12-31), and higher-specified time precision (nanoseconds). The current DateTime data type will continue to operate as-is.

**Advanced Audit: optional 10 year audit log retention add-on****68805**

To help meet rigorous regulatory and internal compliance obligations or conduct longer running investigations, organizations can now add 10-year audit log retention to Advanced Audit. Once enabled, you can access the logs in the Microsoft 365 compliance center or through the Office 365 Management Activity API. The events will also soon be accessible across Microsoft 365 compliance solutions. 10-year audit log retention is generally available and E5 customers can try the feature today for a limited time at no additional cost. An add-on will be required from early 2021 to access this capability

**SharePoint admin - New SharePoint admin center home page****57318**

When you first land in the SharePoint admin center, we want it to be both familiar and useful at a glance. The idea is to provide a familiar experience, taking a similar design approach as the Microsoft admin center. You'll see more and more cards and graphs appear over time – so you can see insights on files, usage security, recommendations, training and so on. Better see what's happening, and then take the appropriate action.

## Microsoft Edge v. 86: New group policy to replace existing diagnostic data policies MetricsReportingEnabled and SendSiteInformation in downlevel Windows and MacOS

69132

Control Microsoft Edge diagnostic data that gets sent to Microsoft on Windows 7, 8, 8.1 and macOS. We are deprecating MetricsReportingEnabled and SendSiteInformation policies. They are being replaced by Allow Telemetry on Windows 10 and then the new DiagnosticData policy on all other platforms. The current plan is for this to mark MetricsReportingEnabled and SendSiteInformation as deprecated in Microsoft Edge 86 and become obsolete in Microsoft Edge 89. The new DiagnosticData policy will release in Microsoft Edge 86.

We see lots of cases where configuration of our protection stack has enabled malicious content to be inadvertently delivered to end users. We're working on a few features that will help address this problem. Our first phase includes Honoring detonation verdicts. All too frequently, URLs and files that have been flagged as malicious are allowed through to the inbox due to transport rules and domain allows. We're updating our filters to ensure that malicious files and URLs are not delivered regardless of configuration, unless manually overridden.

To help protect your users, Office can open files from potentially unsafe locations in Application Guard, a secure container that's isolated from the device through hardware-based virtualization. When Office opens files in Application Guard, users can securely read, edit, print, and save those files without having to re-open files outside the container. This functionality is available as a Preview to organizations with Microsoft 365 E5 or Microsoft 365 E5 Security license or Users (in the above enterprise) who use Microsoft 365 Apps for enterprise on Beta Channel</p> <p>67101 Url : <a href="https://support.microsoft.com/office/application-guard-for-office-9e0fb9c2-ffad-43bf-8ba3-78f785fdb46">https://support.microsoft.com/office/application-guard-for-office-9e0fb9c2-ffad-43bf-8ba3-78f785fdb46</a></p>
<b>MS Preperations</b>	<p>You can enable the public preview Application Guard for Office by following these steps:</p> <p>Download and install Windows 10 cumulative update KB4571744.</p> <p>Select Microsoft Defender Application Guard under Windows Features and select OK.</p> <p>Enabling the Application Guard feature will prompt a system reboot. You can choose to reboot now or after step three.</p> <p>Look for the Microsoft Defender Application Guard in Managed Mode group policy located at Computer Configuration\Administrative Templates\Windows Components\Microsoft Defender Application Guard.</p> <p>Turn on this policy by setting the value under Options as 2 or 3 then clicking OK or Apply.</p> <p>Reboot the system.</p> <p>Learn more:</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/install-app-guard">https://docs.microsoft.com/microsoft-365/security/office-365-security/install-app-guard</a>" Application Guard for Office (public preview) for admins</p> <p>"<a href="https://support.microsoft.com/office/application-guard-for-office-9e0fb9c2-ffad-43bf-8ba3-78f785fdb46">https://support.microsoft.com/office/application-guard-for-office-9e0fb9c2-ffad-43bf-8ba3-78f785fdb46</a>" Application Guard for Office (user guide)</p> <p>"<a href="https://docs.microsoft.com/windows/security/threat-protection/microsoft-defender-application-guard/md-app-guard-overview">https://docs.microsoft.com/windows/security/threat-protection/microsoft-defender-application-guard/md-app-guard-overview</a>" Microsoft Defender Application Guard overview</p>
<b>MS How does it affect me</b>	Files from the internet and other potentially unsafe locations can contain viruses, worms, or other kinds of malware that can harm your users' computer and data. When Office opens files in Application Guard, users can securely read, edit, print, and save those files without having to re-open files outside the container.

## Azure Information Protection: Microsoft 365 Government F3 GCC High and DOD environments are now backfilled with Azure Information Protection P1

66207

This announcement is to confirm that starting 9/1/2020 we're launching Azure Information Protection (AIP P1) in Microsoft 365 Government F3 SKUs for the GCC High and DoD environments. Azure Information Protection P1 cloud-based solution that enables organizations to classify and protect documents and emails by applying labels. For more information on how to take leverage these capabilities please reference our product documentation here.

## SharePoint: SharePoint Online search query volume limits when using app-only authentication

64963

When using the SharePoint Online search APIs with app-only authentication where the app implements the Sites.Real.All permissions level or greater, the app is registered with full permissions and allowed to query across all SharePoint Online content to include user's private OneDrive for Business content. When this change is implemented, queries using the Site.Read.All permissions level or greater will be throttled at 25 QPS. The search query will return with a 429 response and you can simply retry the query. When waiting for 429 recovery, you should ensure to pause all search query requests you may be making to the service using similar app-only permission. Making additional calls while receiving throttle responses will extend the time it takes for your app to become unthrottled. As we scale our system, we realize the importance of hardening the system to run it efficiently and also to protect the system and hence this change. This change is expected to rollout beginning August 2020 into the Fall of 2020.

<b>Microsoft Information Protection adding support for double-byte character set languages</b>	<b>MC220972</b>
--	-----------------

<p>Coming soon, Microsoft Information Protection solutions such as Data Loss Prevention, Exact Data Match, and Communication Compliance will benefit from the ability to detect double-byte language characters found in East Asian languages, improving the ability to understand, label, and protect customer data. Initial languages supported are Japanese, Chinese (Simplified), Chinese (Traditional), and Korean.</p> <p>This change is associated with Microsoft 365 Roadmap ID "<a href="https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66363">https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=66363</a>" 66363.</p> <p>When this will happen</p> <p>Rollout will begin in Japan, Korea, China, Hong Kong, Macau, and Taiwan in late August, and we will follow with worldwide rollout in mid-September. This will allow multi-national tenants that process double-byte character sets to benefit from this capability as well.</p> <p>We expect rollout to be complete in mid-October 2020.</p>	check before:	<b>09/02/2020</b>
	Status:	<b>Rolling out</b>
	Created:	08/26/2020
	Product:	Microsoft Information Protection
	Platform:	World tenant, Online
	Scope:	Administration, Compliance, Security
	Ring:	Preview

<b>Links</b>	66363
<b>Docu to check</b>	Service Description, Automation / Scripts
<b>Linked Item Details</b>	<p>66363 Title : Microsoft Information Protection: Support for Double-byte Character Set languages (Preview)</p> <p>66363 Description: Microsoft Information Protection solutions such as Data Loss Prevention, Exact Data Match and Communication Compliance will benefit from the ability to detect double-byte language characters found in East Asian languages, such as Japanese and Chinese, improving the ability to understand, label, and protect customer data.</p>
<b>MS Preperations</b>	<p>You should consider updating your training and documentation as appropriate.</p> <p>Support for double-byte character set languages will be turned on by default. Review the "<a href="https://docs.microsoft.com/microsoft-365/compliance/mip-dbcsl-relnotes">https://docs.microsoft.com/microsoft-365/compliance/mip-dbcsl-relnotes</a>" Support for double-byte character set release notes documentation.</p> <p>Learn more about how this feature works with sensitive information types: "<a href="https://docs.microsoft.com/en-us/microsoft-365/compliance/create-a-custom-sensitive-information-type?view=o365-worldwide">https://docs.microsoft.com/en-us/microsoft-365/compliance/create-a-custom-sensitive-information-type?view=o365-worldwide</a>" Create a custom sensitive information type in the Security Compliance Center</p>
<b>MS How does it affect me</b>	<p>Support for double-byte character set languages accrues to any solution that requires proper word breaking. This includes the following:</p> <ul style="list-style-type: none"> <li>Custom keyword dictionaries of local language term</li> <li>Custom sensitive information types using regex/keywords</li> <li>Exact Data Match (EDM)</li> <li>Out-of-the-box sensitive information types commonly used for your market (e.g., Japanese My Number, Japan Resident Registration Number, Credit Card, China Resident Identity Card (PRC) number, etc.)</li> </ul>

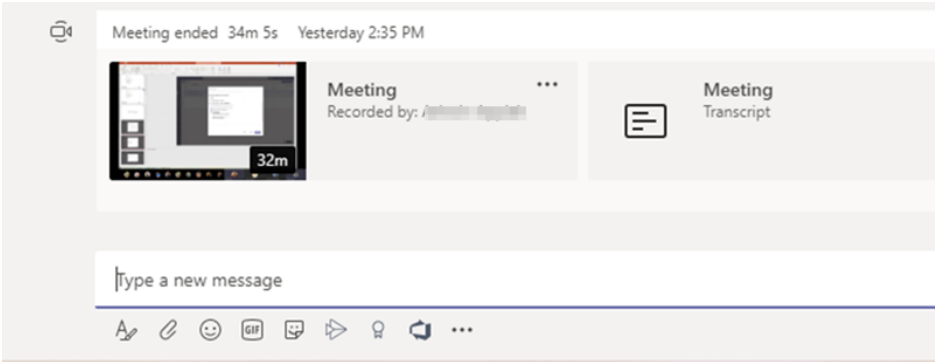

## **(Updated) Introducing live transcription in Microsoft Teams meetings**

**MC220987**

		check before:	<b>09/02/2020</b>
Updated September 15, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below		Status:	<b>In development</b>
Live transcripts in Microsoft Teams meetings will provide another way to both follow and review meeting conversations. Note: Live transcription currently supports only spoken English (English-US).		Created:	08/26/2020
This message is associated with Microsoft 365 " <a href="https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65967">https://www.microsoft.com/microsoft-365/roadmap?filters=&amp;searchterms=65967</a> " Roadmap ID 65967.		Product:	Teams
When this will happen We will begin rolling this out in mid-October (previously late September) and expect the rollout to be complete at the end of October (previously early October).		Platform:	World tenant, Online
		Scope:	Administration, User, Compliance
		Ring:	General Availability

Pictures in MC	<a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4DSRS?ver=d74e">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4DSRS?ver=d74e</a>
Docu to check	User Knowledge base
Linked Item Details	<p>65967 Title : Microsoft Teams - Live Transcription with speaker attribution</p> <p>65967 Description: Live transcripts provide another way to follow along with what has been said and who said it. After a meeting, the transcript file is automatically saved in the chat tab for that meeting.</p>
MS Preperations	<p>You will need to "<a href="https://docs.microsoft.com/microsoftteams/meeting-policies-in-teams#allow-transcription">https://docs.microsoft.com/microsoftteams/meeting-policies-in-teams#allow-transcription</a>" enable the Allow transcription policy in order to have live transcripts in tenant meetings. Today this policy is only used for post-meeting transcription, but we will use this policy for live transcription as well.</p> <p>Note: When using the web client, attendees cannot see the live transcript during the meeting but can view and download the transcript post-meeting.</p>
MS How does it affect me	<p>If you have enabled recording ("<a href="https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#set-up-teams-cloud-meeting-recording-for-users-in-your-organization">https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#set-up-teams-cloud-meeting-recording-for-users-in-your-organization</a>" Allow cloud recording) and transcription ("<a href="https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#prerequisites-for-teams-cloud-meeting-recording">https://docs.microsoft.com/en-us/microsoftteams/cloud-recording#prerequisites-for-teams-cloud-meeting-recording</a>" Allow transcription) policies for your tenant, your users will now see two options in the meeting control bar:</p> <p>Recording and Transcription</p> <p>Transcription</p> <p>Note that recording is combined with transcription. If a user begins recording, the meeting will also feature a live transcription. The meeting transcript is automatically saved whether or not the meeting has been recorded if a user initiated the transcription.</p> <p>The transcript file will be accessible for download post-meeting via chat as well as from the Transcript tab.</p> <p>The meeting organizer will be able to delete the saved transcript when using the Teams desktop app.</p>

Image

In MC216757 (June 2020), we announced that sensitivity labels would soon be applicable to Microsoft Teams sites, Microsoft 365 groups (formerly Office 365 groups), and SharePoint sites. Based on your feedback, we have changed the user interface to separate the container label from the file/email label.

When this will happen This update will roll out in mid-September and is expected to be complete by mid-October.

Status:

**In development**

Updated September 15, 2020: As announced in latest update to MC221113, additional time was needed to complete validations before deploying change and enforcing the Auto Forward Policy. We have completed all validations and will resume deployment of this policy on September 16, 2020.

As a reminder the Auto-Forwarding Policy will be enforced for tenants who have configured their policy to "On" or "Off". For tenants that have made no changes and have no users externally forwarding prior to September 15, 2020 the setting "Automatic" will default to "Off" and automatic forwarding will be disabled. For organizations that have some users externally forwarding prior to September 15, 2020 the setting "Automatic" will default to "On" and we will contact you separately when this will change for your tenant.

Note: If you have configured your Auto Forward policy to "Off" at this time externally forwarded mail will not be blocked.

Updated September 8, 2020: As announced in MC221113 (August 28th), on September 1st, 2020 the Auto-Forwarding Policy was planned be enforced for tenants who have configured their policy to "On" or "Off", this includes tenants that had users external forwarding prior to September 1st 2020.

We have determined that we need additional time to complete validations before we can deploy this change and enforce the policy action. Once we have completed the additional validations, we will send an updated message center post confirming when the policy will be enforced. Original message below for reference.

As originally announced in MC218984 (July '20) automated external email forwarding is a tactic attackers use to exfiltrate data out of an organization. To counter that, we are updating our outbound anti-spam policies. First, we are providing a control to easily enable automatic external forwarding for select people in your organization. Second, we will change the "Automatic" setting to block automatic external forwarding. Internal automatic forwarding of messages will not be impacted by this change. On September 1st, 2020 the Auto-Forwarding Policy will be enforced for tenants who have configured their policy to "On" or "Off". For tenants that have made no changes and have no users externally forwarding prior to September 1st 2020 the setting "Automatic" will default to "Off" and automatic forwarding will be disabled. For organizations that have some users externally forwarding prior to September 1st 2020 the setting "Automatic" will default to "On" and we will contact you separately when this will change for your tenant.

NOTE: No action is needed if you don't want to allow any users to automatically forward messages externally or if no one in your tenant is currently doing so. Additionally, we understand that some organizations already have users automatically forwarding messages outside the organization and we will provide additional time and communications to enable transition to the new policy controls. For these organizations we will communicate via Message center with more details on when the change will impact your specific tenant.

Office 365, Exchange

Platform: Online, World tenant

Scope: Administration, Compliance,  
Security, User

<b>Links</b>	63831,MC218984
<b>Docu to check</b>	Working instructions for IT Support, User Trainings, Service Description
<b>Linked Item Details</b>	<p>63831 Title : Office 365 ATP: External Email Forwarding Controls</p> <p>63831 Description: External forwarding of email is a tactic used by attackers to exfiltrate data out of an organization and controlling that process is difficult. With this new feature we are adding support for more granular controls that allow the Office 365 administrators to easily enable external forwarding for the right people in the organization through the outbound spam policy. We are also moving to disable external forwarding by default so organizations are secure by default.</p> <p>MC218984 Title : Office 365 ATP: External email forwarding controls and policy change</p>
<b>MS Preperations</b>	<p>To prepare for the changes we recommend that all administrators do the following by August 28, 2020.</p> <p>Use the "<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/mfi-auto-forwarded-messages-report">https://docs.microsoft.com/microsoft-365/security/office-365-security/mfi-auto-forwarded-messages-report</a>" Auto-forwarded messages report to identify which users in your tenant are automatically forwarding messages outside the organization. Focus on users with either SMTP forwarding or Inbox rules. Exchange transport rules (ETRs) are unaffected by this change.</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy">https://docs.microsoft.com/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy</a>" Configure the outbound spam policies to allow automatic external forwarding for either your entire organization or specific users.</p> <p>For more information, please see "<a href="https://docs.microsoft.com/microsoft-365/security/office-365-security/external-email-forwarding">https://docs.microsoft.com/microsoft-365/security/office-365-security/external-email-forwarding</a>" Configuring and controlling external email forwarding in Office 365.</p>
<b>MS How does it affect me</b>	<p>In this initial release we will provide updated controls for administrators to configure their outbound antispam policies, "<a href="https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy?view=o365-worldwide#use-the-security-compliance-center-to-create-outbound-spam-policies">https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/configure-the-outbound-spam-policy?view=o365-worldwide#use-the-security-compliance-center-to-create-outbound-spam-policies</a>" via PowerShell and the Security and Compliance Center console, but will not be enforcing the actions so that administrators have an opportunity to configure the settings first. You will be able to determine who will be allowed to automatically forward email using inbox rules, or SMTP forwarding, outside of the organization.</p> <p>There is no impact on external forwarding in this update, however automatic forwarding will be disabled based on the policy in a future update currently planned for September 1, 2020 and we will communicate via Message center. Once the policy takes effect messages that are being automatically forwarded outside the organization will be blocked and non-delivery report (NDR) will be sent to the user.</p>

<b>New service plan for Content explorer</b>	<b>MC221125</b>
	check before: <b>09/04/2020</b>
We're making some changes to how the data classification content explorer is provisioned in your tenant. Content explorer will be part of a new service plan: Content Explorer. Content explorer was previously included as part of the Exchange Online service plan.	Status:
When will this happen	Created: 08/29/2020
We will roll out this change on September 29, 2020.	Product: Exchange
	Platform: Online, World tenant
	Scope: Administration, Compliance, Licensing
	Ring:

<b>Docu to check</b>	User Knowledge base, Working instructions for IT Support, Service Description
<b>More Info URL</b>	<a href="https://docs.microsoft.com/en-us/microsoft-365/compliance/data-classification-content-explorer">https://docs.microsoft.com/en-us/microsoft-365/compliance/data-classification-content-explorer</a>
<b>MS Preperations</b>	<p>When this change takes effect, please make note of the new service plan name for your administrative records and ensure that you update any relevant provisioning documentation as needed.</p> <p>To learn more about content explorer see the Additional Information.</p>
<b>MS How does it affect me</b>	You are receiving this message because your Microsoft 365 or Office 365 license enables access to the data classification content explorer dashboard and feature set. This update will not change your content explorer experience, or impact any other parts of your admin portal.

You might want to update your user training and documentation.

MS How does it affect me

Using a dropdown in the search box in OneDrive for Business, users will be able to choose where they want to search. Users can search their own files in OneDrive for Business as well as shared files that they have access to across the tenant, including shared libraries.

Search my files

Search in shared libraries

## **In Development for Microsoft Intune is now available**

**MC221134**

The "In development for Microsoft Intune" page in our documentation has been updated.

How does this affect me?

The In development page provides a list of features in upcoming releases of Microsoft Intune to assist in your readiness and planning. The list has now been updated. You'll start seeing these changes in the next month or in a subsequent release.

What do I need to prepare for this change?

You can inform your IT staff and helpdesk of the upcoming changes listed on this page. Plan to update your end user guidance, if you feel any of these features would be important to your end users.

Click Additional Information for the link to the In development page.

Docu to check	Working instructions for IT Support, Automation / Scripts
Linked Item Details	65763 Title : Microsoft Information Protection: Feedback Loop for Trainable Classifiers 65763 Description: Customers can report whether classification hits are accurate or not to further improve classification performance.
MS Preperations	Create a Communication compliance or retention policy using trainable classifiers to provide feedback on matched items. Learn more: "https://docs.microsoft.com/microsoft-365/compliance/classifier-creating-a-trainable-classifier" Creating a trainable classifier (preview) "https://techcommunity.microsoft.com/t5/microsoft-security-and/foster-a-culture-of-inclusion-and-safety-with-microsoft-teams/ba-p/1530254" Fostering a culture of inclusion and safety "https://docs.microsoft.com/microsoft-365/compliance/classifier-getting-started-with" Getting started with trainable classifiers (preview)
MS How does it affect me	Trainable classifiers are available as a condition for auto-apply retention labels and "https://docs.microsoft.com/microsoft-365/compliance/communication-compliance" Communication compliance policies. As you deploy policies with trainable classifiers, you may find some items are correctly detected and others may not be. You can help retrain the model, effectively improving the detection algorithm, by providing feedback about classifier performance. You can indicate if an item is a "match" or "not a match" or suggest the item as a match for other classifiers. You can provide feedback on individual items or items in bulk. Before you update a trainable classifier, you can review the results to understand the impact of your feedback. Your input helps make the classifier more accurate. You can provide feedback on items within Communication compliance for policies that are monitoring for trainable classifiers, such as threat, profanity, and harassment. You can also provide feedback on Exchange items with a retention label. For a classifier to retrain, you must provide 30 feedback inputs.

Teams Meeting support for 20,000 attendees	MC221223
Teams will soon support up to 20,000 meeting attendees as view-only participants for tenants with the Advanced Communications add-on. This message is associated with Microsoft 365 "https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=65952" Roadmap ID 65952. When this will happenThis feature will be available at the end of September.	<div>check before: 09/07/2020</div> <div>Status: In development</div> <div>Created: 09/01/2020</div> <div>Product: Teams</div> <div>Platform: Mac, mobile, World tenant</div> <div>Scope: Administration, Security, User</div> <div>Ring: General Availability</div>

<b>Links</b>	65952
<b>Docu to check</b>	Service Description, Working instructions for IT Support, User Knowledge base
<b>Linked Item Details</b>	<p>65952 Title : Microsoft Teams - Overflow meetings</p> <p>65952 Description: When attendees exceed the meeting attendee limit, the meeting will scale to accommodate up to 20,000 in an experience where they can watch.</p>
<b>MS Preperations</b>	<p>If you have purchased the "<a href="https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications">https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications</a>" Advanced Communications add-on, this feature will be ON by default for users who have been assigned a license for the Advanced Communications plan. You may use PowerShell to disable this feature for your entire tenant while you prepare to assign the licenses.</p> <p>Note: The view-only attendance feature is provided using the Teams Live Events streaming services.</p> <p>Learn more about the "<a href="https://www.microsoft.com/microsoft-365/blog/2020/08/03/take-communnnext-level-microsoft-teams/">https://www.microsoft.com/microsoft-365/blog/2020/08/03/take-communnnext-level-microsoft-teams/</a>" Advanced Communication add-on plan.</p>
<b>MS How does it affect me</b>	<p>Currently, Teams meetings are limited to 300 users. If someone tries to join a meeting after it reaches capacity, they are unable to do so.</p> <p>If you choose to purchase the "<a href="https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications">https://docs.microsoft.com/microsoftteams/teams-add-on-licensing/advanced-communications</a>" Advanced Communications add-on, users who are assigned an Advanced Communications license will be able to host a meeting with up to 20,000 people as view-only attendees after a meeting has reached capacity.</p> <p>The inclusion of view-only attendees will not impact the normal interaction available between regular attendees who joined before the meeting reached capacity.</p> <p>Once the maximum Advanced Communications limit is reached, no additional view-only attendees will be able to join.</p> <p>View-only attendees can use Teams in the browser or a Teams desktop app (Windows or Mac). We expect to support Teams mobile apps in mid-October; we will communicate that support via a new Message center post.</p> <p>View-only attendees do not need the Advanced Communication plan to join the meeting in a view-only capacity. However, they do need permission to bypass the Lobby based on set Lobby Policies or Options.</p> <p>View-only attendees will follow all lobby and security policy mechanisms.</p> <p>View-only attendees will do so with limited access to capabilities. For example, view-only attendees will be able to listen to all audio and view a screen or window shared during the meeting. However, they will be unable to share audio or video, and they will be unable to see chat or other applications that are shared during the meeting.</p> <p>Meeting organizers will not be able to see view-only participants in attendee counts or reports; this feature does not support the e-discovery of data. Organizers cannot remove view-only attendees from a meeting.</p>

---

We are delivering the ability for presenters to lock an individual video feed for all attendees to see during a Teams meeting. Once selected, the individual identified as the spotlight will be the main video shown to all participants.  
This message is associated with Microsoft 365 Roadmap ID "https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=67090" 67090.  
When this will happen  
The rollout will begin mid September and finish end of September.

Pictures in MC	<a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4EBqH?ver=092b">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4EBqH?ver=092b</a> <a href="http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4ELLK?ver=d0a6">http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4ELLK?ver=d0a6</a>
Docu to check	User Trainings, User Knowledge base
Linked Item Details	66129 Title : Yammer: Adding Ability to "Mute" Communities at Admin and User levels 66129 Description: Admins will be able to 'mute' Yammer communities so they don't appear in the feed for non-members. Members of the of those muted communities will still see these posts in their home feed. Users will be able to 'mute' Yammer communities so they don't appear in their feed.
MS Preperations	Until you take action, there is no change at the tenant-level. Before muting a community, we recommend creating a thoughtful policy to guide admin muting and recommend amplifying content as an effective tool to shape the conversation by " <a href="https://support.microsoft.com/office/feature-a-conversation-in-new-yammer-92469ece-8a63-424f-9ad6-802ad90fc5c4">https://support.microsoft.com/office/feature-a-conversation-in-new-yammer-92469ece-8a63-424f-9ad6-802ad90fc5c4</a> " featuring conversations. To mute or unmute a community, which affects only non-members, navigate to the community, open the ellipsis in the group header, and click "Mute Community in the Feed" or "Unmute Community in the Feed".
MS How does it affect me	The Yammer Home Feed and the weekly digest email allow users to discover relevant content from across their network; however, there are times when a specific community isn't relevant to an end user. This mute option gives users more control in customizing their Home Feed and their weekly digest email. In addition, admins will be able to mute a community tenant-wide for all who are not members of that community.

Ring:	

We've identified an issue with five methods belonging to the "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice?view=sharepoint-server" WebPartPageWebService Application Programming Interface (API) that could cause impact to data integrity. These methods are "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice.addwebpart?view=sharepoint-server" AddWebPart, "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice.addwebparttozone?view=sharepoint-server" AddWebPartToZone, "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice.savewebpart?view=sharepoint-server" SaveWebPart, "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice.savewebpart2?view=sharepoint-server" SaveWebPart2, and "https://docs.microsoft.com/en-us/dotnet/api/microsoft.sharepoint.soapserver.webpartpageswebservice.getwebpartpageconnectioninfo?view=sharepoint-server" GetWebPartPageConnectionInfo. As a result, we are planning to retire these methods.

Note: If your organization is not utilizing these methods you can safely disregard this message.

Key points:

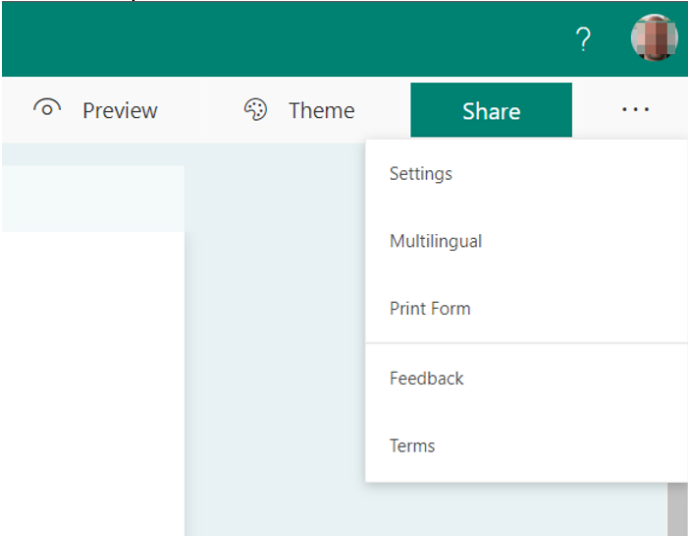

Major: Retirement

Timing: early October 2020 to mid-October 2020

Action: review and assess organizational impact

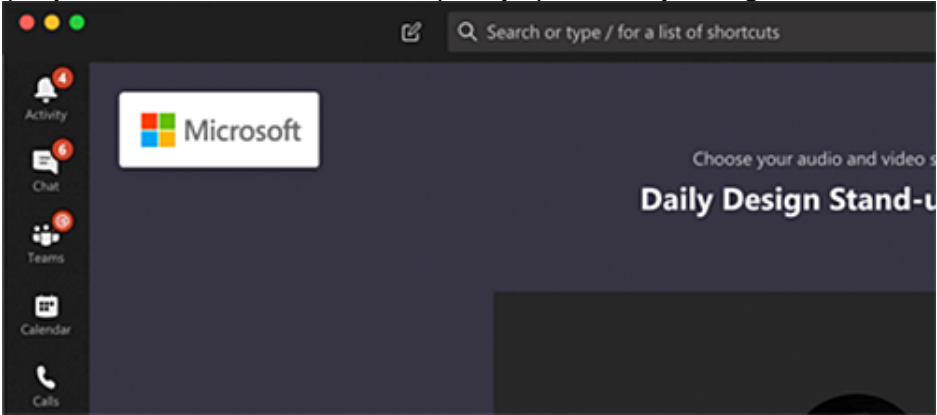

Docu to check	Automation / Scripts, Working instructions for IT Support
MS Preperations	<p>For admins and developers: If your software is currently calling any of the five aforementioned SoapServer endpoints, you'll need to modify the software to instead call methods in the LimitedWebPartManager class of the SharePoint CSOM (version 16.1.20324.12000, or newer). This class includes a new HasWebPartConnections property that allows you to determine whether a web part page connection exists.</p> <p>Learn more</p> <p>"https://www.nuget.org/packages/Microsoft.SharePointOnline.CSOM/" Download CSOM Nuget Package</p> <p>"https://docs.microsoft.com/en-us/previous-versions/office/sharepoint-csom/ee538367(v=office.15)" CSOM LimitedWebPartManager methods</p> <p>"https://docs.microsoft.com/en-us/sharepoint/dev/sp-add-ins/complete-basic-operations-using-sharepoint-client-library-code" Complete basic operations using SharePoint client library code</p>
MS How does it affect me	<p>The affected methods in the SharePoint SoapServer were called primarily to migrate web parts from classic SharePoint sites to SharePoint Online. Once these methods are retired, they will no longer return any data. You can find alternative methods in the SharePoint Client-Side Object Model (CSOM) to achieve this functionality.</p>

Introducing the ability to print a blank form		MC221300
<p>With this update, a Forms owner will be able to print a blank form for any respondent who is unable to complete the form online.</p> <p>This message is associated with Microsoft 365</p> <p>"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67099" Roadmap ID 67099.</p> <p>When this will happen We will begin rolling this feature out the end of August and expect the rollout to be complete mid-September.</p>	check before:	09/09/2020

User Knowledge base

**Linked Item Details**

MC209710 Title : Teams meeting and chat experience improvements  
66459 Title : Teams: Updated functionality for downloading participant reports in Teams meetings  
66459 Description: Meeting organizers, especially teachers and event organizers, often need to know who joined and how many people joined their Teams meetings. With new enhancements, we'll allow you to download the report after the meeting within the Meeting Chat. We've also added new data into the report that allows you to better manage your attendance.

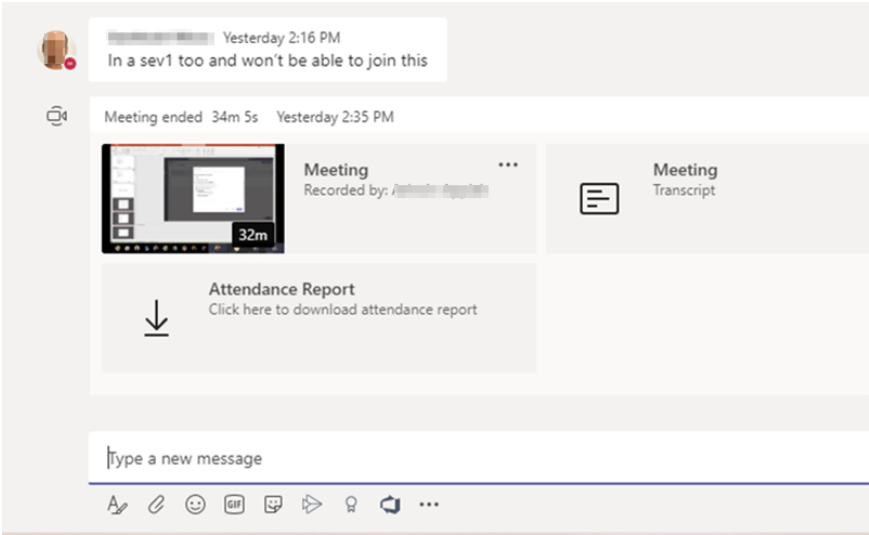

**MS Preperations**

When we introduced this feature in June, feature was disabled by default. It will remain off by default.  
We will not change your policy setting; this update will honor your current state, whether that is on or off.  
You can use a PowerShell cmdlet to turn this feature ON:  
Set-CsTeamsMeetingPolicy -Identity Global - AllowEngagementReport "Enabled"

**MS How does it affect me**

There are two areas of improvement:  
Download point changed from roster viewThe Teams meeting organizer can download the Attendance Report from the meeting chat once the meeting is over. Only the meeting organizer will see the Attendance Report. The recording, transcript and participant list will be grouped together in chat if the meeting is recorded. Otherwise, only the participant list will be available in chat.  
New participant dataThe report will now include these data points: duration, email address, meeting start time, and meeting title.

Change to the minimum iOS system requirements for Outlook for iOS and watchOS

MC221506

		check before:	09/11/2020
<p>We are changing the minimum iOS system requirements for Outlook for iOS and watchOS. Outlook for iOS is supported on the two most recent versions of iOS. With iOS 14 currently in beta, Outlook for iOS is preparing to remove support for iOS 12. In addition, once iOS 14 is released to GA, the system requirements for Outlook for iOS will be updated to reflect support for iOS 14. Microsoft will update the minimum system requirements for the Outlook for iOS app from iOS 12 to iOS 13. Additionally, Microsoft will remove support for watchOS 4 and 5. WatchOS 6 and 7 will be the only supported versions for Apple Watch.</p>		Status:

09/11/2020

Starting September 4th, 2020, administrators will be able to run diagnostics on individual users from the Power Platform admin center to detect potential causes to access issues and suggest potential mitigations. The feature is in Public Preview.

What is changing?

The new experience is in the Power Platform admin center and is available exclusively for environments with a Common Data Service database. From the “users” page in the environment’s settings, the administrator can select a user and run diagnostics. A side panel will open and display detailed information about the user (ex. access mode, status, etc.) and the results of the diagnostics. The following validations are carried out and corresponding results are reported along with potential mitigations for any failed validation:

1. Verify if the user is enabled in Azure Active Directory.
2. Verify if the user has an active license or if the environment has available ‘per app’ plans.
3. Verify if the user is part of the environment’s security group (if applied as an optional security provision).
4. Verify if the user is a member of any Common Data Service security role.

Tests #1, #2, and #3 all need to pass for a user to be enabled in the environment (user status = ‘enabled’). Otherwise, the user will be disabled and can no longer access the environment (user status = ‘disabled’). Test #4 dictates whether the user can access the data in the environment.

The action of running diagnostics will force the user information to synchronize and provide up-to-date status on their properties.

Why should I use this new capability?

Leverage this new capability to effectively self-diagnose and self-resolve user access issues for a given environment. If the diagnostic run does not eliminate the root cause(s), then providing the details of the diagnostics in the support ticket will help Microsoft support engineers to resolve your issue.

What action do I need to take?

No further action is needed. This capability has been added to the Power Platform admin center and is available to all administrators who have access to the environment.

Thank you for being a valued Microsoft customer.

Thank you,

Microsoft

**Linked Item Details** 67557 Title : Outlook for iOS: Recommended Office information  
67557 Description: The Discover feed of information on the Search home page is changing to Recommended and provides quick access to additional relevant company information based on the Microsoft Graph.  
67560 Title : Outlook for iOS: SharePoint News and recorded Teams Meetings  
67560 Description: Your company Discover feed (soon to be renamed Recommended Roadmap ID 67557) will include SharePoint news and access to recently recorded Teams online meetings that are relevant to you.

**MS Preparations** "<https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune#general-app-configuration-scenarios>" You can manage if your Outlook for iOS users can see the Discover feed section in Search in Outlook through a configuration setting.

**MS How does it affect me** The Discover capability, powered by Microsoft Graph, provides a feed of your company's Office files connected to the people in your organization. This feature can be found in the Search experience and shows only documents for which the user has access. This functionality is disabled if Delve is disabled for the user.

1. Changes in Discover feed In Outlook for iOS, users will be able to find interesting SharePoint news based on what colleagues are reading, so they stay up-to-date with the latest in the organization. In addition, we are adding access to recorded Teams meetings.

2. Discover name change We are changing the section name on the Search home page for Outlook mobile from Discover to Recommended; we are also making this change in Microsoft Intune.

With this change, your users will be able to find relevant information by opening and expanding the Recommended section and then scrolling vertically to access additional content. It provides quick access to relevant company information based on the Microsoft Graph.

As part of our efforts to improve the usability and discoverability of the "https://support.microsoft.com/office/ideas-in-excel-3223aab8-f543-4fda-85ed-76bb0295ffc4" Ideas feature in Excel, we are going to begin rollout of a naming update to highlight that the focus of this connected experience is to make Data Analysis simpler, faster and more intuitive. Note: this change does not impact functionality, only the name. The "remove Ideas button from the Ribbon" policy setting, which located under User Configuration\Policies\Administrative Templates\Microsoft Excel 2016\Intelligent Services, will not be affected during this change. In the next 3 months we will be retiring the Group Policy as the Ideas functionality is a "https://docs.microsoft.com/en-us/deployoffice/privacy/connected-experiences" Connected Experiences in Office and there are "https://docs.microsoft.com/en-us/deployoffice/privacy/manage-privacy-controls" new privacy policies for managing the experience. When this will happen We will be rolling out the naming change for Ideas in early October.

**Docu to check** User Trainings, User Knowledge base, Service Description

**MS Preparations** You may consider sharing the naming change with your help desk for awareness. Additionally, you should consider reviewing your Group Policy settings and ensure your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise are configured for the experience you wish to enable. Your feedback is important to us and ask that you let us know how you feel about the Ideas name changes. You can provide feedback by using the thumbs up or thumbs down at the top of this Message center post.

**MS How does it affect me** While this feature provides powerful capabilities we have found that it is not easily discoverable and we believe this may relate to the name of the capability. As such, starting in 30 days we will begin rollout of a new name for the Ideas feature to validate improved discoverability of this feature. To ensure the best result we will be updating the name to one that better reflects the feature's focus on Data Analysis Ideas. We will monitor for improved discoverability and make a decision of which name resonates best with your users before continuing rollout to the remainder of your user population. After the Group Policy setting is retired, whether users can use the feature will depend on your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise. Moving forward the the Ideas feature will only be managed as a "https://docs.microsoft.com/en-us/deployoffice/privacy/connected-experiences" Connected Experiences in Office, please review your "https://docs.microsoft.com/deployoffice/privacy/manage-privacy-controls" policy settings to manage privacy controls for Microsoft 365 Apps for enterprise and the "https://docs.microsoft.com/deployoffice/overview-office-cloud-policy-service" overview of the Office cloud policy service for Microsoft 365 Apps for enterprise.

We are adding reactions to that allow Yammer users to react to conversations and comments. This feature is only available in the new Yammer.  
This message is associated with Microsoft 365  
"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67099" Roadmap ID 64931.  
When this will happen We will begin rolling out this out in mid-September and anticipate that the rollout will complete by the end of the month.

MS PreperationsTo see who has reacted and how, users will need to opt-in to the new Yammer experience. You may want to direct your users to our "https://support.microsoft.com/office/use-reactions-in-new-yammer-02b05cf1-e920-4891-a5a4-0f181948adad" support document to help them understand how to use this feature.

MS How does it affect meWith this feature, users can express a range of emotions that a 'like' did not allow them to easily communicate. We hope reactions will allow Yammer users to connect better and to build a deeper sense of community.  
Users will be able to react to conversations and comments using a range of lightweight reactions  
Users will be able to see who has reacted and how

## New Feature: Inline message translation for Android

MC221732

Inline message translation lets users translate Teams mobile messages into the language they choose. This feature is now rolling out for Android; the iOS rollout is ongoing (MC216842, June 2020). This feature is also related to MC218683 (July 2020), which announced that the Teams inline message translation policy was changing to On by default.

This message is associated with Microsoft 365 Roadmap ID

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=63226)

[365/roadmap?filters=searchterms=63226](https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=63226)" 63226.

When this will happen

The updated Android app will be released to the store in mid-September 2020.

We anticipate that the rollout will be complete by mid-October.

"https://techcommunity.microsoft.com/t5/microsoft-365-blog/announcing-microsoft-lists-your-smart-information-tracking-app/ba-p/1372233" Cards are configurable and display as a row of information.

check before:

**09/21/2020**

Updated September 22, 2020: We have updated this post to ensure it is displaying as intended.

Office has introduced a modern and OAuth based authentication mechanism in Office 2016 and Microsoft 365 Apps for enterprise Win32 clients. Modern auth has been the default way of authentication in Office apps since the release of Office 365 ProPlus, more than 4 years ago. We however allowed customers to override this behavior by setting a regkey EnableADAL to 0 so that they could continue to use the legacy form of authentication against Microsoft 365 resources like SharePoint. This legacy form of authentication was powered by a library called IDCRL. It should be noted that the legacy form of authentication for Exchange Online is basic auth, which is different from IDCRL.

Our data suggests that less than 1% of commercial/organization users have overridden the default setting and are still using IDCRL for authentication purposes in Microsoft 365 Apps for enterprise. Modern auth is a more secure way of signing-in. It also allows additional security features like AAD conditional access using multi-factor authentication and device compliance and policies around them.

We are going to remove support for IDCRL library in newer builds of Microsoft 365 Apps for enterprise so that applications like Word, Excel, PowerPoint, OneNote will always use modern authentication with Microsoft 365 resources. This change will not impact Outlook, which uses basic authentication to communicate with Exchange when the EnableADAL regkey is set to 0.

Key points:

Major: Retirement

Timing:

Starting with Current Channel of Microsoft 365 Apps for enterprise version 2010

Semi-Annual Enterprise Channel (Preview) starting version 2102 in March 2021

Semi-Annual Enterprise Channel in July 2021.

Action: No action, this is for awareness

**Docu to check**      Service Description, Automation / Scripts, Working instructions for IT Support, User Knowledge base

**MS Preperations**      There is nothing you need to do as this notice is for awareness.

**MS How does it affect me**      When the change is implemented, users may see a sign-in prompt on each impacted device.  
Note: this affects only newer builds of Microsoft 365 Apps for enterprise and does NOT impact Office 2016 and 2019 perpetual products.

Intune Plan for Change: Managing Android devices running 10 and above where Google Mobile Services are unavailable

MC222160

<p>Previously communicated in MC215358, Android device administrator management was released in Android 2.2 to manage Android devices. Then beginning with Android 5, the more modern management framework of Android Enterprise was released for devices that can reliably connect to Google Mobile Services (GMS). In areas where Android Enterprise is available, Google is encouraging movement off device administrator (DA) management by decreasing its management support in new Android releases. However, where Android Enterprise or GMS are unavailable, you'll want to use device administrator and familiarize yourself with these changes.</p>	check before:	09/22/2020
	Status:	
	Created:	09/15/2020
	Product:	Intune
	Platform:	Android, World tenant
	Scope:	Administration, MDM, Security
	Ring:	

<b>Recommendations</b>	Most organizations still use Android device administration, even with 3rd part MDM or MAM systems. The change by Google is affecting all solutions. It's highly recommended to set up a mitigation project which will start within the next few weeks,
<b>Links</b>	MC215358,MC221222,MC221226,MC221228
<b>Opportunities</b>	The change to the Android device management by Google will have an impact on the overall security paradigm. This is an excellent opportunity to move to a more identity and object-level security concept.
<b>Description</b>	Google changes the way Android devices are managed. This will be reflected in Intune.

<b>Linked Item Details</b>	MC215358 Title : Intune plan for change: Decreasing support for Android device administrator MC215358 Url : <a href="https://aka.ms/android_da_docs">https://aka.ms/android_da_docs</a> MC221228 Title : Intune Plan for Change: Android 11 trusted root certificate and SCEP certificate changes on Android DA devices MC221228 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a> MC221226 Title : Intune Plan for Change: Admin changes to password settings in Android device administrator profiles MC221226 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a> MC221222 Title : Intune plan for change: Changes coming to Wi-Fi profiles on Android device administrator MC221222 Url : <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a>
<b>More Info URL</b>	<a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793</a>
<b>MS Preperations</b>	Determine if your organization has Android devices that will be impacted and familiarize yourself with the changes and update end user documentation if necessary. Note, the Password Complexity setting will be included in Intune's September release, giving you time to configure it for impacted devices. Additional information <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">"https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793"</a> <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793">https://techcommunity.microsoft.com/t5/intune-customer-success/intune-customer-success-managing-android-devices-where-google/ba-p/1628793</a> <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">"https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935"</a> <a href="https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935">https://techcommunity.microsoft.com/t5/intune-customer-success/decreasing-support-for-android-device-administrator/ba-p/1441935</a> <a href="https://aka.ms/password-complexity">"https://aka.ms/password-complexity"</a> <a href="https://aka.ms/password-complexity">https://aka.ms/password-complexity</a>
<b>MS How does it affect me</b>	This will affect you if you are managing Android devices with Microsoft Endpoint Manager - Intune in locations such as China, or scenarios where GMS are unavailable. If Android Enterprise and GMS are available, you can use them instead. There are several changes to device administrator if using Android 10 and later. These changes will affect newly enrolled devices, newly assigned settings, and updated settings: The end user experience for wi-fi profiles, for more details see MC221222. On devices running Android 11 and later that are not manufactured by Samsung, you won't be able to deploy trusted root certificates. For more information about the extent of the impact, see MC221228. There will be admin changes to password settings and a new setting <a href="https://aka.ms/password-complexity">"https://aka.ms/password-complexity"</a> Password Complexity, for more details see MC221226.

## Turn off message preview for chat notifications in Teams

MC222171

We are introducing a setting that enables users to turn off message previews for their Teams message notifications.  
This message is associated with Microsoft 365 "https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66744" Roadmap ID 66744.  
When this will happenWe will begin rolling this out in early October and expect the rollout to be complete by late October.

MS Preperations

MS How does it affect me

Image

http://img-prod-cms-rt-microsoft-com.akamaized.net/cms/api/am/imageFileData/RE4FC5h?ver=ded9

Working instructions for IT Support

Review the settings and highlight the information you need to see.

Each admin can now hide/show the services they see on the Service Health page. Setting the preferences will only affect the view of a specific admin.

The image is a screenshot of the Microsoft 365 admin center interface. On the left is a navigation pane with categories like Home, Users, Groups, Roles, Resources, Billing, Support, Settings, Setup, Reports, Health, Admin centers, and Security. The 'Health' section is expanded, showing 'Service health', 'Message center', and 'Exchange monitoring'. The main area displays the 'Service health' page for 'Microsoft'. It includes tabs for 'All services', 'Incidents', 'Advisories', 'History', and 'Reported issues'. Below these is a table of 'Microsoft services' with columns for 'Service' and 'Status'. Services listed include Microsoft 365 suite, Yammer Enterprise, Azure Information Protection, Dynamics 365, Identity Service, Microsoft Bookings, Microsoft Forms, Microsoft Kaizala, Microsoft Power Automate, Microsoft Power Automate in Microsoft 365, Microsoft StaffHub, and Microsoft Stream. To the right of the main content is a 'Preferences' sidebar with a 'Custom View' tab. It contains a list of services with checkboxes to toggle their visibility. Services like Azure Information Protection, Dynamics 365, Identity Service, Microsoft 365 suite, Microsoft Bookings, Microsoft Forms, Microsoft Kaizala, Microsoft Power Automate, Microsoft Power Automate in Microsoft 365, Microsoft StaffHub, Microsoft Stream, Microsoft Teams, Mobile Device Management for Office 365, Office Client Applications, Office for the web, OneDrive for Business, Planner, Power Apps, and Power Apps in Microsoft 365 are all checked. A 'Save' button is at the bottom of the preferences panel.

(Update) Teams meetings, end of meeting notification

MC222346

Updated September 24, 2020: To ensure the best possible experience for our users, we are delaying some of our deployments to reduce the amount of change flowing into the services. Please see the updated roll-out timeline below

We will soon be alerting Teams meeting participants when there are five minutes remaining in a scheduled meeting.

This message is associated with Microsoft 365

"https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=67122" Roadmap ID 67122.

When this will happen

We will begin the rollout in late September (previously mid-September) and expect it to be complete in early October (previously late September).

## Reminder: Prepare for MDATP for Mac system extensions activation on macOS 11 Big Sur

---

MC222467

Note: this message applies only to organizations with macOS devices in their environments.

As originally communicated in MC218792 (July '20), when Apple announces general availability of macOS 11 Big Sur, Microsoft Defender ATP for Mac will activate a new system extension-based code path on all Mac devices protected by MDATP. The new code path will be activated immediately after devices upgrade to macOS 11 Big Sur.

Between now and macOS Big Sur general availability, you can evaluate the new MDATP for Mac implementation on Catalina devices that are registered for InsiderFast update channel.

The new code path can be activated on InsiderFast devices running macOS version 10.15.4 or later.

To ensure that the new Microsoft Defender ATP for Mac remains functional and effective immediately after device upgrade to macOS 11 Big Sur, a new remote configuration must be deployed to all macOS devices before Apple announces general availability of macOS 11 Big Sur. If the configuration is not deployed prior to Big Sur GA announcement, immediately after upgrade to Big Sur end-users will be presented with a series of system dialogs asking to grant MDATP agent all necessary permissions associated with the new system extensions.

### Key Points:

**Timing**The new configuration is available now.

MDATP for Mac's new code path can be evaluated now on Catalina devices in the InsiderFast update channel.

**Action:** Review and prepare ahead of Apple announcing the macOS 11 Big Sur general availability.

MS Preperations	<p>Once available, this feature will be enabled by default if you have not customized the setting for your tenant.</p> <p>You can manage the feature through Microsoft 365 admin center. You can review the setting in advance and ensure it is set to the experience appropriate for your organization. You can change it at any time; any changes can take up to 24 hours to go into effect.</p> <p>If a user joined a personal (MSA) list when the setting was enabled and you later disable it, the sync between the user and owner will stop within 24 hours. However, the user may continue to see the list for more than 24 hours.</p> <p>You might consider updating your training and documentation as appropriate.</p> <p>How to change the admin setting</p> <p>The admin setting will enable you to restrict people in your organization from joining lists owned by people outside your organization. However, whether or not the setting is enabled, enterprise users will not be able to share their lists with external personal accounts.</p> <p>Go To Microsoft 365 admin center</p> <p>Select Settings in the left hand pane</p> <p>Select Org settings</p> <p>Under Services select Microsoft To Do</p> <p>Select the correct setting in the right-hand fly-out that says “Allow your users to join and contribute to lists shared from outside the organization”</p> <p>Save the settings</p>
MS How does it affect me	<p>A personal Microsoft account (MSA) is an email address used to sign in to Microsoft services like Office 365, Xbox consoles, or Windows 10 PCs. Users can associate any email address as the user name for their MSA, including addresses from Outlook.com, Hotmail.com, Gmail, Yahoo!, or other providers.</p> <p>A work or school account is managed through Azure Active Directory (Azure AD) for a Microsoft 365 tenant.</p> <p>Microsoft To Do will support "<a href="https://support.microsoft.com/office/create-and-share-lists-4e5aeac6-8649-4813-aae5-2c2ddea2f292">https://support.microsoft.com/office/create-and-share-lists-4e5aeac6-8649-4813-aae5-2c2ddea2f292</a>" list sharing between a personal account (MSA) and a work or school account (Azure AD).</p> <p>By default, users in your organization will be able to join, view, modify and add data to lists owned by an MSA.</p> <p>Users in your organization will not be able to share their lists with any account external to your tenant.</p> <p>Nor will users in your organization be able to join, view, modify or add data to lists owned by an external Azure AD account.</p>

---

Your users will soon be able to quickly create news using Microsoft Teams templates. Custom templates are not yet available for EDU customers but are planned in the future.

67110 Title : Microsoft Teams: Templates for creation of a new Team

67110 Description: With Templates in Teams, users can choose from a variety of customizable templates when creating a new team, helping them get started quickly. IT professionals can also create new custom templates for their organization, allowing them to standardize team structures, surface relevant apps, and scale best practices.

MS Preperations

You might consider updating your user documentation and training.

Learn more: "<https://docs.microsoft.com/MicrosoftTeams/get-started-with-teams-templates-in-the-admin-console#what-are-base-template-types>" Get started with Teams templates in the Teams admin console

"<https://docs.microsoft.com/MicrosoftTeams/create-a-team-template>" Create a custom team template in Microsoft Teams

"<https://docs.microsoft.com/MicrosoftTeams/create-template-from-existing-team>" Create a template from an existing team in Microsoft Teams

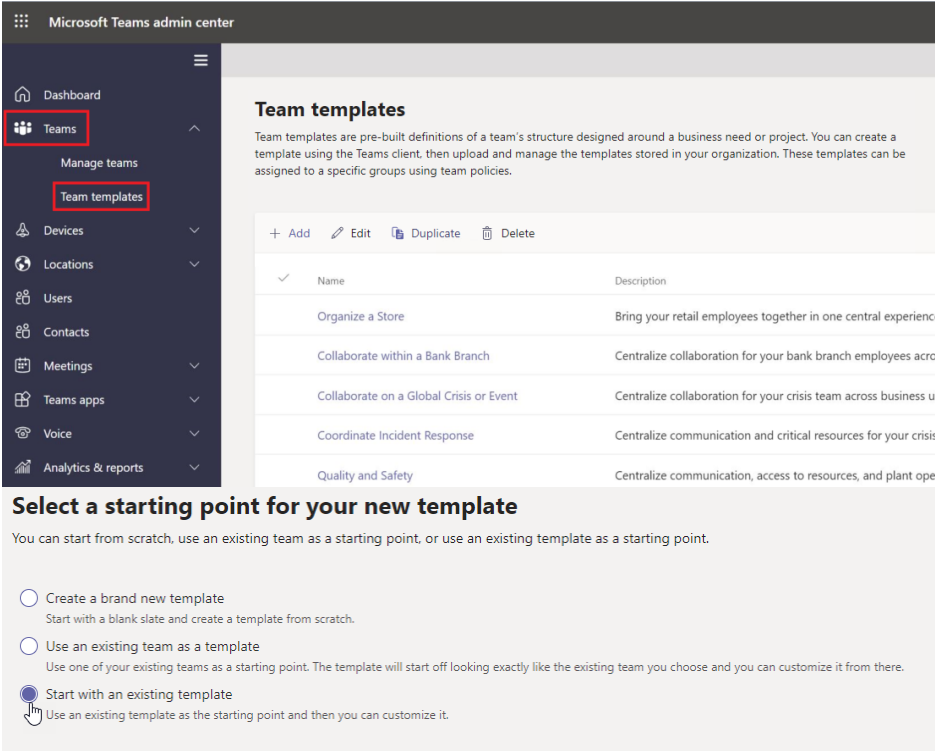

"<https://docs.microsoft.com/MicrosoftTeams/create-template-from-existing-template>" Create a new template from an existing team template in Microsoft Teams

MS How does it affect me

Your users can choose "<https://docs.microsoft.com/MicrosoftTeams/get-started-with-teams-templates-in-the-admin-console#what-are-base-template-types>" from 13 pre-built or base templates when they need to create a new team. We built these base templates for different tasks, such as managing a project or an event or coordinating an incident response. Base templates have a predefined team structure with a set of channels, tabs, and apps; they can be duplicated but not edited.

"<https://docs.microsoft.com/MicrosoftTeams/create-a-team-template>" Your Teams admins can develop custom teams templates to enable users to create the right collaboration space quickly. Each custom template will have its own defined team structure, channels, tabs, and apps. Teams admins can start from scratch, start with an existing template, or duplicate an existing team as a template.

New Power Automate app for Teams

MC222580

A new Power Automate app will soon become available to eventually replace the existing Flow app in the Microsoft Teams app store. We announced that Microsoft Flow would become Power Automate at Ignite 2019.

This message is associated with Microsoft 365

"<https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=68120>" Roadmap ID 68120.

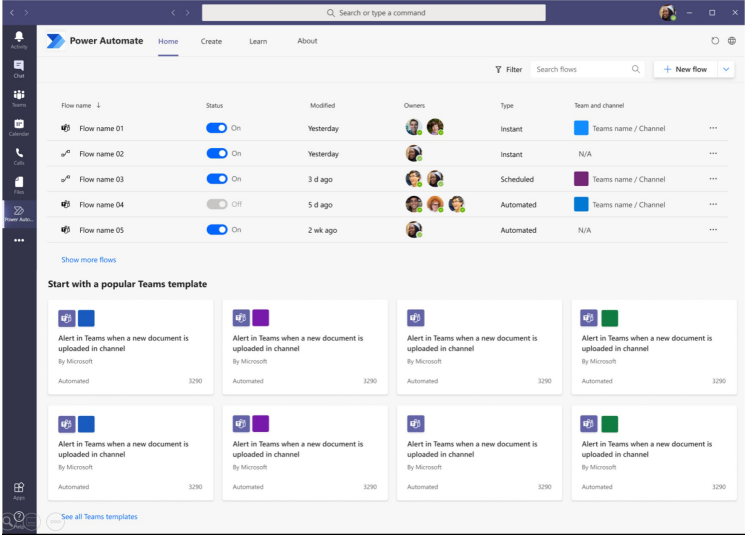

When this will happenThe new app will be available in the Teams app store beginning the end of September 2020.

check before:	09/28/2020

## What's New in the Microsoft Intune Service Update for September

MC222603

Your Microsoft Intune account has been updated to the latest service build.

How does this affect me?

You will see the service release number updated in the Tenant Status blade of the Intune console soon. We've introduced some changes that we're excited for you to try out.

What do I need to do to prepare for this change?

Click additional information below to learn more about what's new in this service release. We'll continue to update the What's New page with any features that are released between now and the next monthly service update.

More information on how the Intune service updates each month is in this blog post: "<https://techcommunity.microsoft.com/t5/intune-customer-success/microsoft-intune-service-updates/ba-p/358728>"

style="background-color: rgb(255, 255, 255)">Microsoft Intune Service Updates

## Reminder: Retiring SharePoint 2010 Workflows

MC222628

As communicated in MC217999 (July '20), with the continued investment in Power Automate as the universal solution to workflow, Microsoft is retiring SharePoint 2010 workflows.

Additionally, we will begin implementing a new banner (example text below) that will be displayed on multiple workflow pages to remind users about the upcoming retirement.

"Starting November 1, 2020 6:00:00 AM, SharePoint 2010 workflows will be retired and users will no longer have the ability to run or create 2010 Workflows. The date displayed in the banner applies to your specific organization. For general dates and information about retirement, visit "<https://aka.ms/sp-workflows-support>" style="" https://aka.ms/sp-workflows-support"

Key Points:

Major: Retirement

Timeline:

Starting August 1st, 2020, SharePoint 2010 workflows will be turned off for any newly created tenants.

Starting November 1st, 2020, Microsoft will remove the ability to run, or create, and or execute SharePoint 2010 workflows from existing tenants.

Action: Review and assess impact

67114 Title : Microsoft To Do: Support for push notifications for shared list activities for work and school accounts  
67114 Description: This update adds the ability to create Microsoft To Do push notifications in Work and School accounts just as you can in your Personal account.

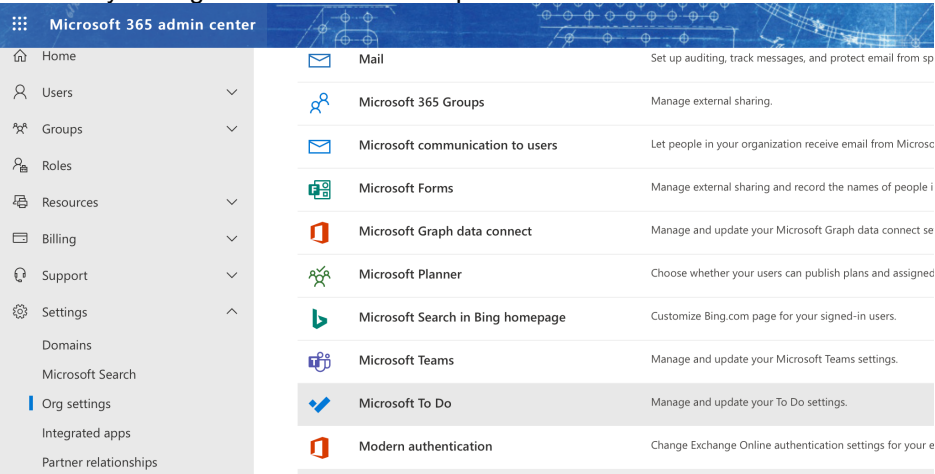

MS Preperations

The admin toggle will be accessible on September 22, 2020. You should review it to ensure that it is set to the experience appropriate for your organization. Any changes may take up to 24 hours to go into effect.  
Should you enable this feature in your tenant, you might want to update your training and documentation.  
To review or change the setting, go the Microsoft 365 admin center.  
Navigate to Settings > Org settings  
Under Services, select Microsoft To Do  
Select the box next to Allow your users to receive push notifications for shared list activities to turn push notifications on or off.

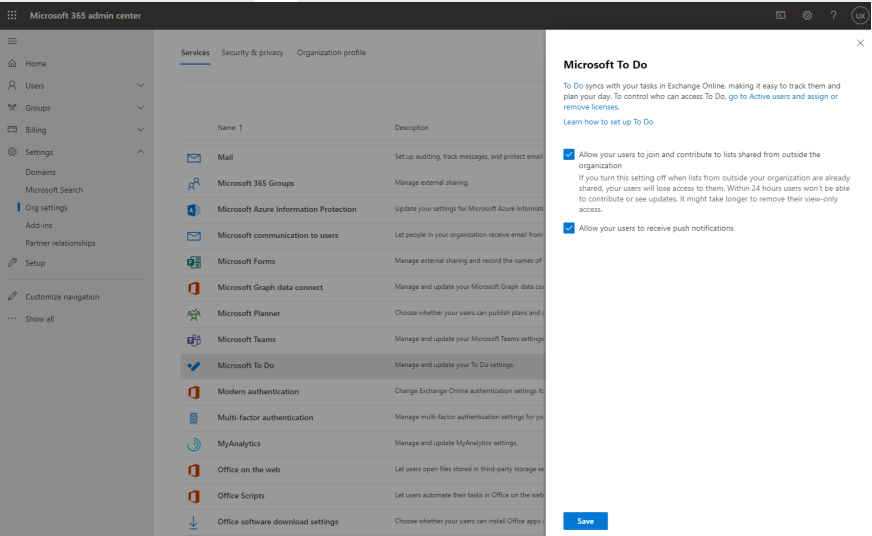

MS How does it affect me

This feature will be enabled unless you take action before Monday, October 19, 2020. On that date, users in your organization will receive push notifications for shared list activities.

Image

Image

List creation from SharePoint sites will get a visual refresh and users will get the additional capability to create lists from eight built-in templates. These updates are already part of the Microsoft Lists app and Lists in Teams rollouts – we are bringing the same goodness to SharePoint sites too.

<b>Docu to check</b>	Working instructions for IT Support
<b>Linked Item Details</b>	<p>66185 Title : Advanced eDiscovery: Supporting linked content from OneDrive and SharePoint Online (modern attachments)</p> <p>66185 Description: To help streamline discovery of linked content, Advanced eDiscovery natively groups linked content from OneDrive and SharePoint Online in the same family as the original Outlook email or Teams and Yammer chat message—streamlining the process of collecting, reviewing, and exporting the related content without additional configuration.</p>
<b>MS Preperations</b>	<p>Ask the Advanced eDiscovery manager in your organization to review this new functionality in a pre-production tenant and to determine how your organization might use this enhanced document retrieval in its investigations.</p> <p>Learn more:</p> <p>"<a href="https://docs.microsoft.com/microsoft-365/compliance/add-data-to-review-set#define-options-to-scope-your-collection-for-review">https://docs.microsoft.com/microsoft-365/compliance/add-data-to-review-set#define-options-to-scope-your-collection-for-review</a>" Define options to scope your collection for review</p> <p>"<a href="https://techcommunity.microsoft.com/t5/microsoft-security-and/improving-ediscovery-workflows-and-enhancing-your-forensic/ba-p/1696658">https://techcommunity.microsoft.com/t5/microsoft-security-and/improving-ediscovery-workflows-and-enhancing-your-forensic/ba-p/1696658</a>" Improving eDiscovery workflows and enhancing your forensic investigations</p>
<b>MS How does it affect me</b>	<p>Advanced eDiscovery in Microsoft 365 provides an end-to-end workflow to preserve, collect, review, analyze, and export data that's responsive to your organization's internal and external investigations.</p> <p>When Advanced eDiscovery administrators and managers use the Search tool to identify relevant documents, they can add those search results to a review set.</p> <p>Exchange 2016 introduced document collaboration that allowed on-premises users to integrate attachments stored on OD/SPO directly into email sent from Outlook on the web. Document collaboration is now supported by all Outlook clients. Rather than attach a file to an email, users insert a link to a file that is stored in OD/SPO. This feature is often called modern attachments, and it reduces storage demands on the Exchange server. However, because these files are stored outside of the Exchange server, until now they were not included in a collection and review set. Your Advanced eDiscovery team now has three options for collecting the results of a search into a review set (pre-existing or new):</p> <p>Conversational review set (beta) Select this to see email and chat enabled as threaded conversations.</p> <p>Enable retrieval for modern attachment Select this to review documents referenced in Outlook as a modern attachment (a link to a SPO/ODB source) as well as any SPO/ODB documents that are included as a link in Outlook or Teams.</p> <p>Include versions from SharePointSelect this to make a copy of all versions of a SharePoint file per the version limits and search parameters of the collection.</p>

## Intune: New Endpoint Security Antivirus reports

MC222596

We are introducing new Microsoft Defender Antivirus reports in the Microsoft Endpoint Manager admin center to help you monitor your devices for status on malware and antivirus states. You will be able to use two new operational reports to see which devices need your attention and two organizational reports to view general antivirus information.

check before: 09/29/2020

<b>More Info URL</b>	<a href="https://aka.ms/new-endpoint-security-av-reports">https://aka.ms/new-endpoint-security-av-reports</a>
<b>MS Preperations</b>	<p>Familiarize yourself with the new reports and update your documentation if needed.</p> <p>For more information on reporting, see</p> <p>"<a href="https://docs.microsoft.com/mem/intune/fundamentals/reports">https://docs.microsoft.com/mem/intune/fundamentals/reports</a>" Intune reports and</p> <p>"<a href="https://docs.microsoft.com/mem/intune/protect/endpoint-security">https://docs.microsoft.com/mem/intune/protect/endpoint-security</a>" Manage endpoint security in Microsoft Intune.</p>
<b>MS How does it affect me</b>	<p>We're adding four new reports for Microsoft Defender Antivirus on Windows 10 in Microsoft Endpoint Manager. These reports include:</p> <p>Two operational reports, Windows 10 unhealthy endpoints and Windows 10 detected malware. In Microsoft Endpoint Manager, select Endpoint security &gt; Antivirus.</p> <p>Two organizational reports, Antivirus agent status and Detected malware. In Microsoft Endpoint Manager, select Reports &gt; Microsoft Defender Antivirus.</p> <p>We encourage you to use these new reports over the legacy Threat Agent Status report which we will be deprecating in the future.</p> <p>Learn more about these reports on the blog:</p> <p>"<a href="https://aka.ms/new-endpoint-security-av-reports">https://aka.ms/new-endpoint-security-av-reports</a>" <a href="https://aka.ms/new-endpoint-security-av-reports">https://aka.ms/new-endpoint-security-av-reports</a></p>

## Microsoft Graph connectors for Microsoft Search Generally Available

**MC222601**

As communicated in MC217074 (June '20) we are following up with details on Microsoft Graph connectors for Microsoft Search becoming generally available to Microsoft 365 Tenants.

Key points:

Microsoft 365 Roadmap ID: "<https://www.microsoft.com/en-us/microsoft-365/roadmap?filters=&searchterms=67139>" target="\_blank" style="background-color: rgb(255, 255, 255); font-family: sans-serif; font-weight: 400;">67139

Timing: Starting mid-October and expect to complete in February 2021

Roll out: Tenant level

Control: Admin level

MS How does it affect me	<p>Once available, Microsoft Graph connectors for Microsoft Search provide a set of out-of-the-box search connectors that enable Microsoft 365 customers to connect Microsoft Search to disparate data sources outside of Microsoft 365. Microsoft Graph connectors for Microsoft Search include the following connectors available within the Microsoft 365 Admin Center:</p> <p>Windows File Share</p> <p>ServiceNow</p> <p>Microsoft SQL Server</p> <p>intranet websites</p> <p>MediaWiki</p> <p>Azure Data Lake Storage Gen2</p> <p>Azure DevOps, and Azure SQL.</p> <p>Note:</p> <p>All Microsoft 365 customers will have access to Microsoft Graph connectors from Microsoft</p> <p>Microsoft 365 E3 or A3 customers will have access to Microsoft Graph connectors from Microsoft and partners.</p> <p>Microsoft 365 E5 or A5 customers will have access to Microsoft Graph connectors from Microsoft and partners in addition to a base indexing capacity of 500 items per user.</p>

---

We're changing the storage for new Teams meeting recordings to be stored on, and served from, OneDrive and SharePoint (ODSP) - instead of Microsoft Stream (Classic). Customers are able to opt in, opt out, or take no action with regard to these changes.

This change will apply to customers who either opt in or take no action following this announcement.

Key points:

Microsoft 365 Roadmap ID: "<https://www.microsoft.com/microsoft-365/roadmap?filters=featureid=67138>" target="\_blank" style="background-color: rgb(255, 255, 255); font-family: sans-serif; font-weight: 400;">67138

Timing: Early October (October 5, 2020) – You can enable the Teams Meeting policy to have meeting recordings saved to OneDrive and SharePoint instead of Microsoft Stream (Classic)

End of October (October 31, 2020) – Meeting recordings in OneDrive and SharePoint will have support for English captions via the Teams transcription feature.

Early to mid-November (Rolling out between November 1 -15 , 2020) – All new Teams meeting recordings will be saved to OneDrive and SharePoint unless you delay this change by modifying your organization's Teams Meeting policies and explicitly setting them to "Stream"

Q1 2021 – No new meeting recordings can be saved to Microsoft Stream (Classic); all customers will automatically have meeting recordings saved to OneDrive and SharePoint even if they've changed their Teams meeting policies to Stream"

Rollout: Tenant level

Control: "<https://docs.microsoft.com/en-us/MicrosoftTeams/tmr-meeting-recording-change>" Admin via PowerShell

<b>Links</b>	67138
<b>Docu to check</b>	Service Description, User Knowledge base
<b>Linked Item Details</b>	<p>67138 Title : Microsoft Teams: meeting recordings saved to OneDrive and SharePoint</p> <p>67138 Description: Ability to save Microsoft Teams meeting recordings to OneDrive and SharePoint for improved sharing capabilities, basic governance, automatic retention labels, go local, bring your own keys and, more that comes from recording video files and storing them in SharePoint and OneDrive.</p>
<b>More Info URL</b>	<a href="https://docs.microsoft.com/en-us/MicrosoftTeams/tmr-meeting-recording-change">https://docs.microsoft.com/en-us/MicrosoftTeams/tmr-meeting-recording-change</a>
<b>MS Preperations</b>	<p>Customers are able to opt in, opt out, or take no action with regard to these changes. Changes in this communication will apply to customers who either opt in or take no action.</p> <p>Tenant admins can opt in or opt out of OneDrive and SharePoint as the Teams meeting recording storage location via a Teams policy in PowerShell. Additionally, customers who wish to have captions for their meetings will need to enable transcript recording in Teams.</p> <p>In Q1 CY2021, saving Teams meeting recordings to Microsoft Stream (Classic) will no longer be allowed. Precise dates will be communicated in a subsequent post.</p> <p>Learn more: "<a href="https://docs.microsoft.com/MicrosoftTeams/tmr-meeting-recording-change">https://docs.microsoft.com/MicrosoftTeams/tmr-meeting-recording-change</a>" Use OneDrive for Business and SharePoint or Stream for meeting recordings</p>
<b>MS How does it affect me</b>	<p>This change impacts your organization in several ways:</p> <p><b>New features</b>The move to ODSP immediately unlocks long-awaited features including external and guest sharing, retention policy application (<a href="https://docs.microsoft.com/microsoft-365/compliance/apply-retention-labels-automatically">https://docs.microsoft.com/microsoft-365/compliance/apply-retention-labels-automatically</a>), GoLocal support, and BYOK support for customers, with improved transcription quality, speaker attribution, transcript content search, and other features to follow in CY2021.</p> <p><b>Meeting storage</b>Non-Channel meetings will be stored in the OneDrive of the person who clicked the record button in a special folder labeled "Recordings" – that sits at the top of the recorder's OneDrive. Channel meetings will be stored in a folder labeled "Recordings" under a folder named after the channel under the Team's document library.</p> <p><b>Permissions</b>All meeting invitees - except for external users – in non-channel meetings will automatically get a shared link to access the meeting recording. External users will need to be explicitly added to the shared list by the meeting organizer or the person that clicked the record button. For Channel meetings, permissions will be inherited from the owners and members list in the channel.</p> <p><b>Feature gaps</b>The following gaps exist today:</p> <ul style="list-style-type: none"> <li>Ability to block download of the video by meeting participants</li> <li>Ability to view and edit the transcript in the player, but closed captions will be present</li> <li>Non-English language transcripts/captions</li> <li>Variable playback speed in video player</li> <li>Transcript timeframe search (e.g., to find a specific point in time when something was discussed)</li> </ul>

We are making it possible for Outlook for Android users to synchronize the Outlook for Android calendar and a local device calendar database.			
Key points			
Microsoft 365 " <a href="https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=63429">https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=63429</a> " Roadmap ID 63429			
Timing: by the end of October			
Roll-out: user level roll-out v tenant level			
Control type: user control and admin control			
Action: review and assess			

Links	63429
Docu to check	User Knowledge base, Automation / Scripts
Linked Item Details	<p>63429 Title : Outlook for Android: Two way synchronization with local Calendar</p> <p>63429 Description: Provides 2-way synchronization between the Outlook for Android calendar and users' local device calendar. When enable, events created in the Outlook app can be viewed and/edited from other local calendar apps, and vice versa, events created in the local other calendar apps can be viewed and edited from within Outlook.</p>
MS Preperations	<p>If you choose to adjust the default settings, you can control the availability of calendar sync through Intune App Protection policies as well as control the default sync state of the feature through app configuration policies.</p> <p>This feature rolls out default On at the tenant level; calendar sync is allowed and can be enabled and used by your users. Admins who wish to block this behavior at the tenant level will need to deploy changes via Intune App Configuration Policies. With Intune App Protection Policies or App Configuration Policies, admins can control the availability of calendar sync for the work or school account, similar to how they currently manage contact sync.</p> <p>The calendar sync rolls out default Off at the user level; users must enable calendar sync to use this functionality. Admins can change this default sync behavior to be on automatically for the work or school account by using app configuration policies which are supported for delivery either through the mobile device management operating system channel for enrolled devices or through the App Protection Policy channel.</p> <p>You may want to communicate to your Outlook for Android user that this capability will be rolling out should you not disable it.</p> <p>Learn more:</p> <p>"<a href="https://docs.microsoft.com/mem/intune/apps/app-protection-policy-settings-android">https://docs.microsoft.com/mem/intune/apps/app-protection-policy-settings-android</a>" Android app protection policy settings in Microsoft Intune</p> <p>"<a href="https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune">https://docs.microsoft.com/exchange/clients-and-mobile-in-exchange-online/outlook-for-ios-and-android/outlook-for-ios-and-android-configuration-with-microsoft-intune</a>" Deploying Outlook for iOS and Android app configuration settings</p>
MS How does it affect me	<p>With this setting enabled at the tenant level, your users will be able to export calendars and events from an account in Outlook for Android to the local device calendar database. They can choose to view and edit these events from other calendar apps (e.g., Samsung Calendar or Google Calendar). When a user creates, edits, or deletes events from within their other calendar apps, the changes will be synced back to Outlook for Android.</p>

Microsoft 365 compliance center: Auto-apply retention labels leveraging document understanding		68690

As originally announced in MC200104 (January '20) we will be retiring legacy eDiscovery tools soon.

When this will happen

There are several key dates for this retirement and we're now approaching the October 1, 2020 milestone.

In-Place eDiscovery and Holds in the Exchange admin center (EAC)

July 1, 2020: You won't be able to create new searches and holds, but you can still run, edit, and delete existing searches at your own risk.

Microsoft Support will no longer provide assistance for In-Place eDiscovery Holds in the EAC.

October 1, 2020: The In-Place eDiscovery Holds functionality in the EAC will be placed in a read-only mode. This means you'll only be able to remove existing searches and holds.

\*-MailboxSearch cmdlets

July 1, 2020: You won't be able to use the New-MailboxSearch cmdlet to create new In-Place eDiscovery searches and In-Place Holds, but you can still use the other cmdlets to run, edit, and delete existing searches and holds at your own risk. Microsoft Support will no longer provide assistance for these types of searches and holds.

October 1, 2020: As previously stated, the In-Place eDiscovery Holds functionality in the EAC will be placed in a read-only mode. This also means that you won't be able to use the New-MailboxSearch, Start-MailboxSearch, or Set-MailboxSearch cmdlets. You'll only be able to get and remove existing searches and holds.

For more information, please see "<https://docs.microsoft.com/en-us/microsoft-365/compliance/legacy-ediscovery-retirement?view=o365-worldwide>" Retirement of legacy eDiscovery tools.

## Effects for Operations

additions from MC200104:  
Automatic assignments via Exchange / PowerShell of legal hold might break.

### Recommendations

additions from MC200104:  
Check your processes and tool, which set legal hold and eDiscovery functions and features, due to the retirement of Exchange Admin Center In-Place eDiscovery Holds, supporting cmdlets and EWS.

### Links

MC200104

### Description

additions from MC200104:  
Microsoft plans massive changes to the eDiscovery and legal hold features.

### Docu to check

Working instructions for IT Support, Service Description, Automation / Scripts

### Linked Item Details

MC200104 Title : (Updated) Retirement of Exchange Admin Center In-Place eDiscovery and Holds

MC200104 Url : <https://docs.microsoft.com/microsoft-365/compliance/legacy-ediscovery-retirement>

MC200104 Info Url : <https://docs.microsoft.com/microsoft-365/compliance/overview-ediscovery-20>

### More Info URL

<https://docs.microsoft.com/microsoft-365/compliance/legacy-ediscovery-retirement>

### MS Preparations

Migrate all usage to Microsoft 365 eDiscovery or appropriate alternatives. These are described at: "<https://docs.microsoft.com/en-us/microsoft-365/compliance/legacy-ediscovery-retirement>" Retirement of legacy eDiscovery tools. If you're interested in migrating existing In-Place eDiscovery searches and holds to the Microsoft 365 compliance center, please see "<https://docs.microsoft.com/en-us/microsoft-365/compliance/migrate-legacy-ediscovery-searches-and-holds?view=o365-worldwide>" Migrate legacy eDiscovery searches and holds to the Microsoft 365 compliance center.

### MS How does it affect me

Any holds created by using In-Place eDiscovery Holds in the EAC (or by using the corresponding cmdlet) will continue to preserve data. In-Place eDiscovery searches and holds can be removed at any time.

---

## Prevent/Fix: Shared mailboxes inaccessible due to license expired error

MC222773

A change was made to Exchange Online to correct the way unlicensed mailbox access is handled. This change may cause Shared mailboxes to be inaccessible due to a license expired error.  
Note: If you are not experiencing the following license expired error you can safely disregard this message  
"The mailbox isn't available. This may have occurred because the license for the mailbox has expired. To find out how to gain access to this mailbox again, contact the person who manages your email account."

check before:

Product:

Azure Active Directory,  
Exchange

Platform:

Online, World tenant

Scope:

Administration

Ring:

<b>Docu to check</b>	Working instructions for IT Support
<b>MS Preperations</b>	If you are experiencing the error message that the license has expired and the mailbox is showing as a shared mailbox in both On-Prem AD and Azure AD but in Exchange Online it is not a shared mailbox, run the following cmdlet using " <a href="https://docs.microsoft.com/powershell/exchange/connect-to-exchange-online-powershell">https://docs.microsoft.com/powershell/exchange/connect-to-exchange-online-powershell</a> " Exchange Online PowerShell: Set-Mailbox -Type Shared
<b>MS How does it affect me</b>	This could cause delegates who are accessing shared mailboxes to no longer have access. This occurs because both On-Prem AD as well as Azure AD see the mailbox as Shared, but Exchange Online still sees the mailbox as a User mailbox.

## **(Updated) Office Scripts to be enabled by default**

**MC221139**

Updated September 18, 2020: We have updated the title to more accurately reflect the state of the change. Additionally, we have provided more details about the timeline. We apologize for any confusion. Thank you for your feedback.

In January, we released Office Scripts, a feature that enables users to automate their repetitive tasks in Excel Online, for public preview. We are now transitioning from public preview to making Office Scripts available by default for your organization.

61687 Title : Excel: Office Scripts for task and workflow automation in Excel

61687 Description: In January, we released Office Scripts, a feature that enables users to automate their repetitive tasks in Excel Online, for public preview. The feature will now be available by default to all M365 Enterprise, Business, and EDU SKUs that have access to the O365 desktop apps.

61687 Url : <https://support.microsoft.com/en-us/office/introduction-to-office-scripts-in-excel-9f8e283d-adb8-4f13-a75b-a81c6baf163a>

MS Preperations

This feature ships default On. If you would like to disable this feature, you need to act by October 1, 2020.

If you would like to "https://docs.microsoft.com/microsoft-365/admin/manage/manage-office-scripts-settings" manage how Office Scripts is used in your organization, go to the M365 admin center, select Settings > Org settings. Then, select Office Scripts to view the Office Scripts admin controls. These controls will be available on August 31, 2020.

To block Office Scripts use in your tenant, deselect 'Let users automate their tasks in Office on the web'. This will hide the Automate tab for everyone in your tenant.

This feature is on by default. Should you disable and then wish to enable the feature, select 'Let users automate their tasks in Office on the web'. The global admin can choose to either allow all users access or create a specific group of users who have access to Office Scripts.

Once the 'Let users with access to Office Scripts share their scripts with others in the organization' checkbox is selected, the global admin can also choose whether or not a user can share scripts within an organization. No external sharing is allowed.

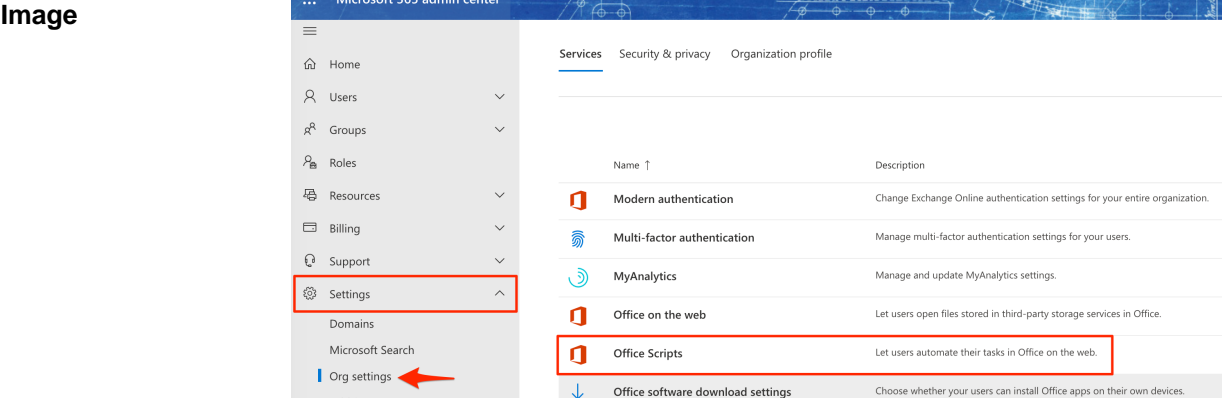

Note:

If your organization is not currently opted-in to the Office Scripts public preview experience, these controls will only affect Targeted Release users until the change is released to the rest of the organization.

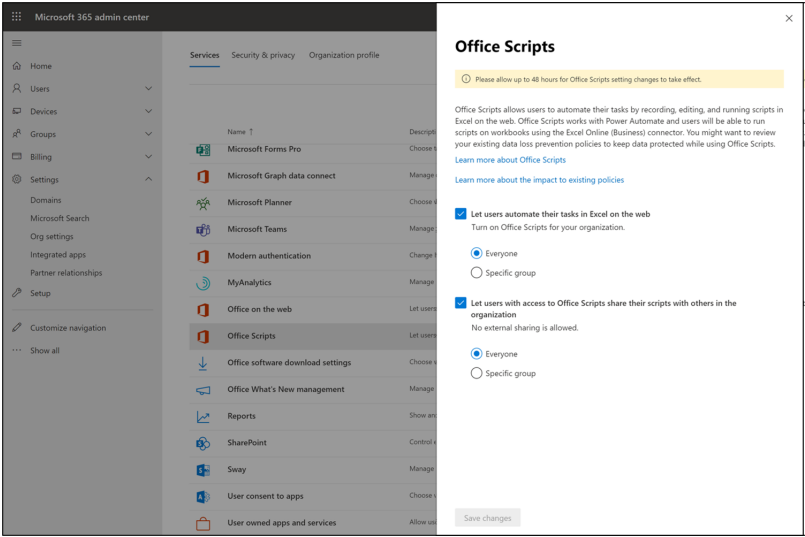

Learn more: "https://docs.microsoft.com/microsoft-365/admin/manage/manage-office-scripts-settings" Manage Office Scripts settings

MS How does it affect me

"https://support.microsoft.com/office/introduction-to-office-scripts-in-excel-9f8e283d-adb8-4f13-a75b-a81c6baf163a" Office Scripts is an automation platform in Excel Online that allows users in your organization to create and record scripts to automate their repetitive workflows. With this change, the feature will be available by default for your organization unless you take action.

## Records Management: Regulatory record labels

MC222757

As announced at Ignite, we're introducing the public preview of regulatory record labels which further enhance immutability of labeled items. These new labels prevent metadata changes, records movements, and records versioning. They also block users and administrators from removing a label once applied.

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?filters=&searchterms=63062)

[365/roadmap?filters=&searchterms=63062](https://www.microsoft.com/microsoft-365/roadmap?filters=&searchterms=63062)" Roadmap ID 63062.

When this will happen This feature is available now worldwide.

### Linked Item Details

63062 Title : Records Management: Regulatory Records (public preview)

63062 Description: Provides customers the ability to declare items in SharePoint Online as regulatory items. These labels are more stringent label vs record labels. Targeted to Financial services or other industries who have WORM compliance requirements. Will update the Cohasset assessment to include SharePoint Online.

63062 Url : <https://docs.microsoft.com/en-us/microsoft-365/compliance/records-management?view=o365-worldwide>

### MS Preperations

Review a "<https://docs.microsoft.com/microsoft-365/compliance/records-management#compare-restrictions-for-what-actions-are-allowed-or-blocked>" detailed comparison of the restrictions a regulatory record label enforces, including which actions are allowed or blocked.

If you would like to take advantage of this new functionality, "<https://docs.microsoft.com/microsoft-365/compliance/declare-records>" here's how to get started.

"<https://docs.microsoft.com/microsoft-365/compliance/records-management>" Learn about records management in Microsoft 365.

### MS How does it affect me

If your organization requires records to comply with high immutability standards, you can leverage regulatory record labels to enforce the maximum restrictions available in Microsoft 365.

This new capability, when configured as recommended, can help you meet SEC 17a-4, FINRA Rule 4511, and CFTC Rule 1.31 (c) – (d) requirements for SharePoint, OneDrive for Business, Exchange email messages, and certain Teams and Skype for Business content.

## Calendar view on Microsoft Lists and SharePoint lists

MC222826

Users will now be able to view list content in a modern calendar view.

This message is associated with Microsoft 365

"[https://www.microsoft.com/microsoft-](https://www.microsoft.com/microsoft-365/roadmap?rtc=1&filters=&searchterms=64167)

## Microsoft Whiteboard introduces per user licensing

MC222821

Microsoft Whiteboard, which is automatically enabled for most Microsoft 365 tenants, will soon read licenses at a user level. There's no change to how Microsoft Whiteboard is managed at the tenant level. If you do not use Whiteboard in your tenant, you can disregard this message. This message is associated with Microsoft 365 "https://www.microsoft.com/microsoft-365/roadmap?filters=searchterms=66761" Roadmap ID 66761. When this will happen This feature will be enabled mid-October.

check before:	10/01/2020
Status:	In development
Created:	09/25/2020
Product:	Azure Active Directory, Whiteboard
Platform:	World tenant, Online
Scope:	Administration, User, Licensing
Ring:	General Availability

**Links** 66761

**Docu to check** Service Description, Automation / Scripts, Working instructions for IT Support

**Linked Item Details** 66761 Title : Whiteboard: Per user licensing  
66761 Description: Tenant admins will be able to use licenses to enable or disable access to Whiteboard at an individual user level, instead of only at the global tenant level. These licenses currently exist in tenants today, but are not used for enablement.

**MS Preperations** There is no change to your current Microsoft Whiteboard tenant setting. User licenses are enabled by default.  
If you wish to use per user licensing, "https://docs.microsoft.com/azure/active-directory/fundamentals/license-users-groups" you can assign or remove licenses in the Azure Active Directory portal.  
Learn more: "https://support.microsoft.com/office/enable-microsoft-whiteboard-for-your-organization-1caaa2e2-5c18-4bdf-b878-2d98f1da4b24" enable Microsoft Whiteboard for your organization.

**MS How does it affect me** We are introducing the ability to control access to Whiteboard at the user level. These licenses currently exist in tenants, but they have not used for enablement.  
With this change, Whiteboard will read licenses at both the tenant and user level and will block individual access should you disable a user license.

## Optimize your end user experience using reauthentication best practices

MC222813

We have recently updated the "https://docs.microsoft.com/azure/active-directory/authentication/howto-mfa-mfasettings#remember-multi-factor-authentication" target="\_blank" style="">remember Multi-Factor Authentication (MFA) on a trusted device feature to extend authentication for up to 365 days. You are receiving this email because you are currently using this setting within your tenant. However, you also have Azure Active Directory (Azure AD) Premium licenses, which allow you to use the "https://docs.microsoft.com/azure/active-directory/conditional-access/howto-conditional-access-session-lifetime#user-sign-in-frequency" Conditional Access – Sign-in Frequency policy that provides more flexibility for reauthentication settings.  
When this will happen The extended duration for remember MFA on a trusted device and the Conditional Access sign-in frequency policy are available now.

## Update to license overallocation process for select subscriptions purchased through Microsoft Volume Licensing

MC222870

Microsoft is updating our license overallocation process to:

Improve the customer experience when executing specific license transition scenarios (like a step-up order or a seat reduction), and  
Avoid unintended license consumption.

Our updated license overallocation process permits a customer to temporarily have more licenses assigned to users relative to the number of licenses currently owned.

Overallocation permits the customer to manage the transitioning of user license assignments to align with their new license types and counts while ensuring existing users have uninterrupted access to their services.

This updated process also supports automatic adjusts of overallocations on a periodic basis, eventually aligning with what the customer now owns.

A simple sample scenario:

A customer currently has an E3 subscription for 300 seats. After November 2, 2020, all customers on an Enterprise Agreement will be limited to assigning up to 300 users to an E3 license.

The customer subsequently places a “Step-up” order for 100 seats of E5.

The customer now owns 200 E3 seats and 100 E5 seats.

Prior to any overallocation process, up to 100 existing E3 users could have lost access to the service (100 more E3 licenses are assigned relative to the 200 now owned), even though 100 E5 licenses are now available.

Under the original overallocation logic, there was a fixed amount of overallocation to ensure no user would lose services, however this did not adequately protect customers from overconsumption.

With our updated overallocation logic, 100 E3 seats are automatically provided (matching what had been allocated), to ensure all existing E3 users will maintain access to their Microsoft 365 services. Additionally, as the customer transitions users, periodic adjustments are also made. e.g.:

The customer subsequently transitions 75 users from E3 to E5.

When a “periodic check” occurs, our logic recognizes the license transitions that have taken place and adjusts the overallocation down to 25 (from 100).

Customers remain responsible for their license consumption, therefore the 100 E3 users should be transitioned to E5 as soon as possible to align assignments with what the customer owns now.

Assuming the customer completed their license transitions to E5, when the next “periodic check” occurs, the remaining 25 seat overallocation will now be adjusted down to 0.

<b>MS Preperations</b>	<p>This change affects only SharePoint list and form customizations after October 25, 2020. Therefore, your users need to take action only if they create new classic form customizations after October 25, 2020.</p> <p>If your users have a list or library forms customized using methods two or three above, they can ensure it continues to fall back to classic by setting an EditFormUrl or NewFormUrl property to point to the existing form URL.</p> <p>Users can also configure an entire list or library to use classic mode using Advanced settings</p> <p>Navigate to the list that you want to use classic mode.</p> <p>Select Settings Gear button and then select List Settings</p> <p>Select Advanced Settings</p> <p>Change the "List experience" setting to "Classic experience."</p> <p>Learn more</p> <p>"https://support.microsoft.com/office/differences-between-modern-and-classic-experiences-for-lists-and-libraries-30e1aab0-a5cc-4363-b7f2-09e2ae07d4dc" Differences between modern and classic experiences for lists and libraries</p>
<b>MS How does it affect me</b>	<p>Classic list and library forms support the following customizations:</p> <p>Set the ContentType.EditFormUrl or ContentType.NewFormUrl properties to point to a custom form URL</p> <p>Adding a Content editor web part or other web part to the form page</p> <p>By adding a JSLink to one or more fields that appear on the form</p> <p>Today, when one of these three customizations exists on a form inside a list or library that's configured to use the "https://docs.microsoft.com/sharepoint/dev/transform/modernize-classic-sites" SharePoint modern experience, those forms will continue to render in classic to ensure customizations are visible to all users.</p> <p>With this change</p> <p>All customizations in the above list that were in place before October 25, 2020 will continue to render in the classic SharePoint experience.</p> <p>For customizations created after October 25, 2020:List item one customizations will continue to render in the classic experience</p> <p>List items two and three customizations will no longer render in the classic experience by default</p>

<b>Microsoft 365 admin center Network connectivity preview</b>		<b>MC222869</b>
		<b>10/02/2020</b>
<p>The Network connectivity category within the Microsoft 365 admin center allows you to see a network assessment that evaluates the impact of your network design on Microsoft 365 user experience in a 0 – 100 scale. This is calculated based on network attributes which have been proven through support cases to affect user experience the most. The network assessment is best evaluated at a specific office location, but an organization wide network assessment is also provided. In addition, specific network insights are provided which identify network design improvements that could be made to align with the published network connectivity principles and improve network performance.</p> <p>When this will happen</p> <p>The feature is available in preview now and can be accessed by signing up in the Microsoft 365 admin center. It is planned to be generally available by April 2021.</p>	check before:

IT admins will also be able to review resource-specific consent (RSC) permissions for the apps within Teams admin center. With that admins will be able to unblock their users for the third-party apps they have already reviewed and approved to use in their organization.</p>
<b>MS Preperations</b>	Learn more: " <a href="https://docs.microsoft.com/MicrosoftTeams/app-permissions-admin-center">https://docs.microsoft.com/MicrosoftTeams/app-permissions-admin-center</a> " View app permissions and grant admin consent in the Microsoft Teams admin center
<b>MS How does it affect me</b>	<p>We are announcing three changes in the Teams admin center:</p> <p>Global admins will be able to review and grant consent to Graph API permissions registered in Azure Active Directory on behalf of the entire tenant for the permissions an app is requesting, such as reading information stored in a team or sending an email on behalf of users. Admins will be able to unblock third-party apps they have already reviewed and approved to use in their organization.</p> <p>In July (MC218561) we released the "<a href="https://docs.microsoft.com/en-us/microsoftteams/platform/graph-api/rsc/resource-specific-consent">https://docs.microsoft.com/en-us/microsoftteams/platform/graph-api/rsc/resource-specific-consent</a>" resource-specific consent (RSC) permissions model which granted team owners the ability to consent for an application to access and/or modify a team's data. With this change, IT admins will be able to review the permissions for RSC apps deployed by team owners.</p> <p>IT admins can install apps with team scope to any team in their organization.</p>

## **Reminder: Office 2013 Client Connectivity to Office 365 Services**

**MC218020**

We are republishing the content for MC190854 (Sept, 2019) as it was removed from Message center prematurely. The original message is provided below. We apologize for the inconvenience.

As previously announced via "<https://www.microsoft.com/microsoft-365/blog/2017/04/20/office-365-proplus-updates/>" blog and MC175274 (March, 2019), Office 2013 clients' connections to commercial Office 365 services will not be supported after October 13, 2020. After this date, ongoing investments in the Office 365 cloud services – including Exchange Online, SharePoint Online, and OneDrive for Business – will proceed based on post-Office 2013 requirements. We recommend that organizations with Office 2013 clients consider migrating to Office 365 ProPlus.

Support for Office 2016 and Office 2019 connections to Office 365 cloud services will continue until October 2023. Up to date information on current system requirements can be found under on the "<https://products.office.com/office-system-requirements>" Office system requirements page, with related timelines available in the Office system requirements

"<https://query.prod.cms.rt.microsoft.com/cms/api/am/binary/RE2OqRI>" matrix.

<b>Docu to check</b>	Service Description, Automation / Scripts, User Knowledge base
<b>Linked Item Details</b>	<p>MC175274 Title : The Lifecycle Dashboards are now available to help you ensure user access to Office 365</p> <p>MC175274 Url : <a href="https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard">https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard</a></p> <p>MC190854 Title : Office 2013 Client Connectivity to Office 365 Services</p> <p>MC190854 Url : <a href="https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard">https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard</a></p> <p>MC190854 Blog Url : <a href="https://www.microsoft.com/microsoft-365/blog/2017/04/20/office-365-proplus-updates/">https://www.microsoft.com/microsoft-365/blog/2017/04/20/office-365-proplus-updates/</a></p>
<b>More Info URL</b>	<a href="https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard">https://docs.microsoft.com/sccm/core/clients/manage/asset-intelligence/product-lifecycle-dashboard</a>
<b>MS Preparations</b>	<p>In order for you to better understand whether and how your organization is affected by this change, and where you need to migrate users, there are two System Center Configuration Manager "https://docs.microsoft.com/sccm/sum/deploy-use/office-365-dashboard" dashboards (updated as part of version 1902) that can help:</p> <p>the SCCM Product Lifecycle dashboard allows you to see which versions of Office are running on your desktops, to determine which will need updated Office apps to help ensure a seamless connection to Office 365 services</p> <p>the Office 365 ProPlus Upgrade Readiness report on the Office 365 client management dashboard helps to identify desktops in your organization that are ready to upgrade to Office 365 ProPlus with high confidence.</p> <p>Use these dashboards to identify users on Office 2010 and Office 2013 clients, deploy Office365 ProPlus or a supported version of Office perpetual to those desktops, and ensure that they will have supported access to Office 365 services after October 13, 2020.</p>
<b>MS How does it affect me</b>	<p>Microsoft will not take any active measures to block older Office clients, such as Office 2013 and Office 2010, from connecting to Office 365 services. However, legacy clients attempting to connect to a modern, always up- to- date cloud service may experience performance and reliability issues. Customers will face an increased security risk, and may find themselves out of compliance depending on specific regional or industry requirements. Microsoft Help may not be able to resolve issues that arise due to unsupported service connections.</p>

## TLS 1.0 and 1.1 retirement date in Office 365 to be October 15, 2020

MC218794

We originally paused the retirement of TLS 1.0 and 1.1 in Office 365 (MC186218 June '20) due to these unprecedented times. As companies have pivoted their supply chains and countries have started to re-open, we have re-established a retirement date for TLS 1.0 and 1.1 in Office 365 to be October 15, 2020. As previously communicated (MC126199 in Dec 2017, MC128929 in Feb 2018 and MC186827 in July 2019), we are moving all of our online services to Transport Layer Security (TLS) 1.2+ to provide best-in-class encryption, and to ensure our service is more secure by default.

Note: If your organization has already taken steps to migrate from TLS 1.0 and 1.1 you can safely disregard this message.

Key Points:

Major: Retirement

Timing: October 15, 2020

Action: update or replace client devices as appropriate

**Links** MC128929, MC186218

## Exchange: Block sending to a Distribution Group when it's on the BCC line

67096

The high message traffic on some groups can lead to Inbox clutter and noise, especially when many members use Reply All to respond on the thread. To reduce the noise many people will create an Inbox Rule to move incoming group messages to a specific folder. Some well-intended senders will put the group on the Bcc line so recipients can't Reply All to the whole group. But Inbox Rules doesn't evaluate any recipient on the Bcc line, so doing so effectively breaks the rule so the message ends up in the Inbox, thus contributing to the inbox clutter the user was trying to avoid. When this feature ships we'll enable the ability for group and distribution list owners and admins to block sending to a group if the group is put on the Bcc line. If a user puts such a group on the Bcc line and sends the message, it'll be rejected with a non-delivery report (NDR) saying Bcc'ing this group isn't allowed.

With the recent breakthroughs in deep learning techniques, you can now go beyond the common search term-based queries. The result is answers to your questions based on the document content. This opens a whole new way of finding knowledge. When you're looking at a water quality report, you can answer questions like "where does the city water originate from? How to reduce the amount of lead in water?"

## Message Recall in Exchange Online

59438

The Outlook for Windows Message Recall feature is extremely popular with users, yet it doesn't always work so well. Part of the problem is that the recall is client-based, and the recall can only happen if the recipient also uses Outlook. With millions of users with mailboxes in Office 365, we're now able to improve upon that feature by performing the recall directly in the cloud in Office 365 mailboxes, so it doesn't matter which email client the recipient uses, the recall takes place in their Office 365 mailbox, and when their client syncs their mail, the message is gone. While there are still some conditions where the recall still won't happen (like the message being read by the recipient), moving the recall to the cloud significantly improves the recall success rate. Additionally, we'll now also offer an aggregate message recall status report, to make it simpler to see for whom the recall succeeded and for whom it failed.

## New and improved Microsoft Graph connectors for Microsoft Search

57065

Microsoft Graph connectors provide a set of out-of-the-box search connectors to allow for you to connect Microsoft Search to disparate data sources outside of Microsoft 365. Microsoft Graph connectors will include the following connectors available within the Microsoft 365 Admin Center: Windows File Shares; ServiceNow, Microsoft SQL Server, Intranet websites, MediaWiki, Azure Data Lake Storage Gen2, Salesforce and an ingestion API.

## **Securing SMTP Authenticated Submissions - Per Mailbox and By Default**

**59439**

We're kicking off a multi-phased effort to better secure SMTP authenticated submissions. SMTP authenticated submission is commonly used by applications or devices (printers, scanners, etc.) to submit email into the Office 365 service. It only requires login credentials, and doesn't support modern authentication. So this leaves any account that's using SMTP authenticated submission more vulnerable to abuse and hacking than accounts that exclusively use the other protocols that do support modern authentication. Last year we introduced Remote PowerShell cmdlets to disable SMTP authenticated submission for your entire organization or for individual mailboxes, and recently we released a switch in the Exchange Admin Center (EAC) to toggle it off for individual mailboxes. In Q2 CY 2020 we'll start to disable it for existing Office 365 organizations who aren't using SMTP Authenticated Submission at all, and starting in Q4 CY 2020 we'll start to judiciously disable it for existing organizations in Office 365 who have it enabled for some mailboxes, working closely with them to transition away from this less secure protocol while ensuring the continuity of their critical business email workflows.

check before:	<b>11/30/2020</b>

Created:	12/07/2019
Product:	Exchange
Platform:	World tenant, Online
Scope:	Administration, Security
Ring:	General Availability

<b>Recommendations</b>	Check if you are using SMTP based submissions currently in your environment. Don't plan to directly connect SMTP clients like printers or multi-functional devices to Office 365 exchange service.
<b>Comments</b>	<p>At the moment, it's not clear which technical solution Microsoft will offer to compensate for the deprecated SMTP submission function. The statement that they will work closely with the customers to avoid business interruptions based on SMTP is very vague and does not point to any technical direction.</p> <p>We assume an on-premises or other cloud-based SMTP Relay will be needed.</p>
<b>Description</b>	Microsoft disables the ability to send emails via SMTP authentication with password and username until Q4 2020. This affects multiple usage scenarios where SMTP is involved like multi-functional devices printers, or other systems which are relying on the capability to use SMTP.

## Send from proxy addresses (aliases) from OWA

59437

The ability to send email from a proxy address (aka alias) other than the sender's primary SMTP address is useful in multiple scenarios, such as mergers and acquisitions when you need the to send from multiple branded domain names, or sending on behalf of a team or department, like info@contoso.com. And of course, having the FROM and REPLY TO boxes preserve that alias when the recipient sees it is just as important. So to kick-off our journey to provide you and your users with the flexibility to send email using alias, we're excited to announce that soon Outlook on the web (aka OWA) will natively support the ability to choose the sender or FROM from a drop-down list right within the compose pane. And when the recipient receives that message, the FROM and REPLY TO will show that alias, regardless where the recipient's mailbox happens to live.

## Microsoft 365 admin center: Enhanced management capabilities in Microsoft Defender Antivirus for SMB IT admins

67118

New management capabilities that make it easier for small and medium-sized businesses to get visibility into how Defender Antivirus is protecting the Windows 10 devices in their organizations. From the Microsoft 365 admin center, IT admins will be able to view active threats in their environment, understand which users and devices are affected by them, which of these were blocked or quarantined, and where a review is needed. These admins will also have oversight from one place to see which devices are running Microsoft Defender Antivirus, if those are up to date, and where action is needed. The new capabilities apply to all Windows 10 devices that are enrolled in Microsoft Intune with a Microsoft 365 Business Premium subscription plan.

## Microsoft Compliance Center: Expanded support to search and export items in SharePoint and OneDrive for Business Recycle Bin in Core eDiscovery and Advanced eDiscovery

67092

Traditionally, when a site is on hold, the files in the Recycle Bin would be stored in the Preservation Hold library. In cases when a site is not on hold, there is no way to search or export items in the Recycle Bin. The eDiscovery and SharePoint Online teams are making architectural changes that will make the Recycle Bin (both first-stage and second-stage Recycle Bins) in SharePoint Online and OneDrive for Business searchable and exportable by eDiscovery Managers. That means organizations can search and export items in the Recycle Bin regardless of whether a site is on hold or not

## Microsoft Search: Smart Find (Find-in-Document) in Word, Excel, and PowerPoint

68801

Search your document like you search the web. We're utilizing well-established web search technologies, such as query and document understanding, and adding deep learning based natural language models. This allows us to handle a much broader set of search queries beyond "exact match." Typos: When there is a misspelling in the query, search can now show related matches. For example, technician vs. technician. Forms of words: When there are different forms of the word in document and query. For example: tech, technology, technologies"; or USA, U.S.A, United States, United States of America; or newborn, new born, new-born, etc. Synonyms: For example: citation, quotation, quote, reference might be all the candidates for a term that you are searching for inside the document. A multi-word query: A single word query might lead to too many search results. A modern semantic search can often yield better results. For example: as a query of Oil Price, the content having Price of Oil, Prices of the Oil, Cost of Oil can offer related matches from within the document content.

## SharePoint admin center - updated homepage dashboard

68812

When you first land in the SharePoint admin center, we want it to be both familiar and useful at a glance. The idea is to provide a familiar experience, taking a similar design approach as the Microsoft admin center. You'll see more and more cards and graphs appear over time – so you can see insights on files, usage security, recommendations, training and so on. Better see what's happening, and then take the appropriate action.

## Microsoft Search: Use, view, and manage your personal query history

67133

Microsoft Search is the intelligent search experience in Microsoft 365. We're improving Microsoft Search, adding a new option to view and manage your personal query history. With personal query history, you'll see your recent queries as you begin typing in the search box to help you get back to insights and information you recently used or accessed so you'll no longer have to bookmark your queries or memorize the right query to get you back to where you were. Your personal query history can be managed through your Office 365 My Account settings. New My Account privacy controls allow you to delete your query history or download your query history for future reference.

## Using Microsoft Authentication Library (MSAL) with Yammer Groups API

MC221062

Starting December 1 2020,  
"https://developer.yammer.com/docs/group\_membershipsjsongroup\_idid"  
Yammer Groups API endpoints will only support the usage of Azure Active Directory (AAD) tokens. Yammer Groups API endpoints will no longer support the usage of "https://developer.yammer.com/docs/authentication-1" Yammer OAuth tokens. Microsoft recommends that customers and partners transition to using "https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview%C2%A0" Microsoft Authentication Library (MSAL) and AAD tokens with the Yammer API.

Key Points:

Major: Retirement

Timing: December 1, 2020

Action: review and assess impact

**MS Preperations**

Use MSAL to authenticate with Yammer: Microsoft recommends that customers and partners transition their apps to authenticate using the Microsoft Authentication Library (MSAL) to acquire AAD tokens from the Microsoft Identity Platform to operate with the Yammer API. MSAL is available for .NET, JavaScript, Android, and iOS, which support many different application architectures and platforms. Learn about MSAL "<https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview>" here.

Set up AAD Client Application: Follow "<https://docs.microsoft.com/en-us/azure/active-directory/develop/quickstart-register-app>" these instructions to set up a client application and assign Delegated Yammer API Permissions to access Yammer APIs.

**MS How does it affect me**

Last year, we announced "<https://docs.microsoft.com/en-us/yammer/configure-your-yammer-network/overview-native-mode>" Native Mode, which gets your network ready to experience Microsoft 365 integrations. Native Mode requires that all your users are created in AAD, all Groups are Microsoft 365 Connected and all Yammer Files are stored in SharePoint Online. With the move to files in SharePoint, Yammer Files API started require using AAD tokens.

As Yammer continues its journey to integrate into the Microsoft 365 ecosystem, there will be even more shared Yammer experiences across Microsoft 365, such as with Teams, Outlook and other applications. All of these require using AAD tokens. Yammer's OAuth token cannot be accepted to conduct these operations. Overtime all Yammer API endpoints will be changed to exclusively support AAD tokens.

Starting December 1, 2020, Yammer Group API endpoints that are used to Update, Delete Groups, and manage Group Membership and Group Admins will only support AAD tokens. Using Yammer OAuth tokens will result in a bad request response from the server. Create and Read operations will be supported with Yammer OAuth tokens, however using AAD tokens for all API scenarios with Yammer is strongly recommended.
