Microsoft 365 admin center Network connectivity preview

MC222869

The Network connectivity category within the Microsoft 365 admin center allows you to see a network assessment that evaluates the impact of your network design on Microsoft 365 user experience in a 0 – 100 scale. This is calculated based on network attributes which have been proven through support cases to affect user experience the most. The network assessment is best evaluated at a specific office location, but an organization wide network assessment is also provided. In addition, specific network insights are provided which identify network design improvements that could be made to align with the published network connectivity principles and improve network performance.

When this will happen

The feature is available in preview now and can be accessed by signing up in the Microsoft 365 admin center. It is planned to be generally available by April 2021.

For Outlook mobile clients, Microsoft is adding automatic signing and automatic message encryption using Secure Multipurpose Internet Mail extensions (S/MIME) as well as providing end user options to extend delegate mailbox permissions.

	Administrators can use their mobile device management solution to require always sign and/or always encrypt with an app configuration policy on devices that are either enrolled or not enrolled. Microsoft Intune will include this option at the at the end of September.
	You might want to update user documentation and training.
MS How does it affect me	For organizations that use S/MIME for added security for email, this release allows users to set the S/MIME setting to "Always sign" and / or "Always encrypt".
	After a user enables this setting, they will no longer have to manually set each email to be signed and encrypted.
	Valid S/MIME certificates are required to send signed and encrypted emails.
	Outlook mobile users can now grant delegate inbox permissions from within Outlook for iOS and Android.
	Users can set a delegate mailbox in order to allow others to take actions on their behalf.
	This release also adds the ability for users that have been granted folder level permissions from other Outlook endpoints to view those folders in Outlook mobile.
	These enhancements now complete our offering with shared and delegate mailbox scenarios. Organizations can enable access to another person's mailbox using FullAccess permissions or users can grant others access to their mailboxes using Delegate permissions.

Microsoft Search: Smart Find (Find-in-Document) in Word, Excel, and PowerPoint

68801

Search your document like you search the web.   We're utilizing well-established web search technologies, such as query and document understanding, and adding deep learning based natural language models. This allows us to handle a much broader set of search queries beyond "exact match." Typos: When there is a misspelling in the query, search can now show related matches. For example, technincian vs. technician. Forms of words: When there are different forms of the word in document and query. For example: tech, technology, technologies"; or USA, U.S.A, United States, United States of America; or newborn, new born, new-born, etc. Synonyms: For example: citation, quotation, quote, reference might be all the candidates for a term that you are searching for inside the document. A multi-word query: A single word query might lead to too many search results. A modern semantic search can often yield better results. For example: as a query of Oil Price, the content having Price of Oil, Prices of the Oil, Cost of Oil can offer related matches from within the document content.
